DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"10/15/04-Vought-Spill transferred from Rommel to Vought as per Rommel.08/31/2005 - Feng - Project transferred from Vought to Feng.10/17/2005 - Feng - Project reviewed by Feng:Tank Closure Report, Tyree, dated August 7, 1998. On 6/16-24, 1998, ten (10) 550-gallon (gasoline), two (2) 4000-gallon (gasoline) and one (1) 550-gallon (waste oil) were removed for Federal EPA mandate. Total of 14 soil endpoint samples were taken, among these there were 9 from gasoline tankfield excavation and 5 from waste oil tank excavation. Analyticals show moderate high concentration in soil samples. In addition, approx. 1,038 tons of impacted soils were removed from site. Quarterly Monitoring Report (8/2003 - 7/2005). 5 monitoring wells onsite. Groundwater flow easterly. No remedial system has been installed. For W-1, BTEX was below MDL and low MTBE. For W-2, both BTEX and MTBE were fluctuated/decreased/increased between a few thousands ppb and a few hundreds ppb. For W-3, BTEX and MTBE

decreasing. For W-4, BTEX and MTBE have decreased from high to low concentration. For W-5, low BTEX and MTBE were detected. 10/17/2005 - Feng - No Further Action denied due to the following reason: fluctuation and tendency of increasing of BTEX and MTBE show on W-2. 691ppb BTEX and 363ppb MTBE were shown on 7/21/2005. so keep monitoring is required. 10/18/2005 - Feng - Spill#: 97-06106 has been consolidated into this spill#. 10/31/2005 - Feng - Quarterly Monitoring Report, 8/2005 - 10/2005. 5 monitoring wells onsite. Groundwater flows to east at depth of 7.68' to 8.83' bg. BTEX and MTBE increased. W-1, below MDL. W-2, increasing, 2,085 BTEX and 831 MTBE. W-3, increasing, 36 BTEX and 280 MTBE. W-4 and W-5, low or below MDL. 2/27/2006 - Feng - Quarterly Monitoring Report, 11/2005 - 1/2006. The site is an active gasoline service station. Groundwater flows to east at the depth of 7.04' to 8.09' bg. 5 monitoring wells onsite. W-1, ND, 3 ppb MTBE. W-2, decreased and 1,499 ppb BTEX, increased and 884 ppb BTEX. W-3, decreased and 15 ppb BTEX, decreased and 2 ppb MTBE. W-4, BTEX ND, 6 ppb MTBE. W-5, both ND. (RJF)8/1/2008 - Project reassigned to Feng. 9/4/2008 - Getty Properties portfolio meeting with Tyree and Delta. Check the remaining soil contamination and how much was removed. One well downgradient to justify for closure, work plan 3/2009. Need to lower down the dissolved. (RJF)2/5/2009 - Reviewed Investigation Work Plan, dated December 17, 2008, by Tyree. Tyree proposed to install 1 well. Field work to be scheduled early 2009. Investigation Report to be due 3/2009. Work plan is approved. (RJF)3/17/2009 - Quarterly Monitoring Report, 6/2008 - 8/2008, 8/2008, by Tyree. Active gasoline service station. Groundwater was gauged and sampled 7/17/2008. 5 monitoring wells. NO LNAPL. DTW 8.31' to 9.65' bg. Flows to east. BTEX range ND to 1,572 ppb (W-2). MTBE range ND to 140 ppb (W-2). (RJF)5/7/2009 - Quarterly Monitoring Report, 6/2008 - 8/2008, 11/2008, by Tyree. Active gasoline service station. Groundwater was gauged and sampled 10/16/2008. 5 monitoring wells. NO LNAPL. DTW 8.31' to 9.65' bg. flows to east. BTEX range ND to 122ppb (W-2). MTBE range ND to 55 ppb (W-2). (RJF)6/9/2009 - Reviewed Subsurface Investigation Report, dated 5/13/2009, pdf via email on 5/13/2009, by Tyree. On 4/21/2009, Tyree oversaw Associated Environmental Services during the installation of MW-6. MW-6 was installed approximately 25 feet bgs. No PID reading. Bedrock at 11 feet. 2 soil samples were collected, at 0-5 feet and 5-7 feet, no exceedance of VOCs. Groundwater was encountered at 8-10 feet, strong odor in GW was noted. 820 ug/L benzene, 5,190 ug/L ethylbenzene, 836 ug/L toluene, 19,110 ug/L xylenes, 29,956 ug/L BTEX, 4,850 ug/L 1,2,4-Trimethylbenzene, 1,330 ug/L 1,3,5-Trimethylbenzene. (RJF)6/10/2009 - Quarterly Monitoring Report, 10/2008 - 1/2009, 2/2009, pdf via email 5/29/2009, by Tyree. Active Getty gasoline service station. Groundwater was monthly gauging and quarterly sampling. Groundwater was sampled 1/21/2009. 5 monitoring wells. DTW 8.32' to 9.64' bg. Flows to southeast. NO LNAPL. BTEX range ND to 2,344 ppb (W-2). MTBE range ND to 89 ppb (W-2). 12/4/2009 - Quarterly Monitoring Report, 7/2009-9/2009, 10/2009, by Tyree. Active Getty service station. Groundwater was monthly gauged, 9/1/2009, 9/25/2009 and 10/23/2009. DTW 7.71' to 9.23' bg. Flows to southeast. NO LNAPL. Groundwater was sampled on 10/23/2009. BTEX range ND to 14,789 ppb (MW-6). MTBE range ND to 25 ppb (MW-2). There are currently no remote fills at this site as shown on the current as-built site plan. During the installation of MW-6 in 5/2009, bedrock was encountered at 11' bg. Drilling refusal was encountered at 3 feet bg at five different step off locations during

5/2000 subsurface drilling investigation. SIR will be submitted 3/2010. (RJF)6/4/2010 - 1Q2010, 1/2010 - 3/2010, 5/2010, by Tyree. Active Getty Service station. Monthly gauged on 1/19/2010, 2/17/2010 and 3/22/2010. Quarterly sampled on 2/17/2010. 6 monitoring wells. NO LNAPL. DTW 7.55 (W-5) to 9.94 (W-2). Flows to southeast. BTEX range ND to 27,559 ug/L (W-6). MTBE range ND to 12.6 ug/L (W-2). An investigation work plan was submitted on 4/2/2010 to delineate soil and groundwater impacts in the vicinity of W-2 and W-6. Subsurface Investigation Work Plan, dated 3/31/2010, by Tyree. Tyree proposes to install 3 monitoring wells to delineate the northwest, southeast and northeast of W-2 and W-6. work plan is approved. email to Joe King (Tyree) "The work plan is approved, I will send you the approval letter next Monday. You can start scheduling the field work in the meantime. since all the other wells are overburden wells and they indicate impacts above the bedrock already. We do not require bedrock wells in case no groundwater is hit in the new wells installation, but you still need to collect soil samples. In case you encounter really wet/moisture soil, you may consider putting the well there."6/8/2010 - Approval letter to Getty Properties. Investigation report due 9/2010. 12/8/2011 - Reviewed 3Q2011, 10/2011, by Tyree. Only the Figure was attached. Max BTEX 11,386 ug/L (MW-6). Tyree requests the approval of Ozone injection.

Remarks: caller pulling tanks found contaminated soil.ORIGINAL SPILL ASSIGNED TO O'DOWD.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DER Facility ID: 273402
 DEC Memo: 3/1/05-Vought-Spill response off hours duty-Vought called Farrantino Oil and spoke with mark Loughlin (646-235-9752) and crew on way to site. Spill result of tank overfill. Spil came out vent pipe onto sidewalk and out of fittings on AST in secondary containment room. Vought called DEP Gilmore and spill call originated from NYC Hotline (no onwer information). Vouht performed site visit and Petroleum Tank Cleaners (PTC) onsite (Anthony Lara 718-624-4842) and cleaning up sidewalk. Vought instructed PTC to vacuum out drain on Corner of Academy and Vermilyea. Drain was vacuumed and secondary containment room was inspected and speedy dry was put down (about 10-15 gallons spilled in secondary containment). No odors present in building or in basement. Spill on concrete and in drain (DEP notified) with no pathways to subsurface> Spill closed by Vought
 Remarks: Tank overfill caused 100 gallons of home heating oil to spill outside. Sewer is affected. Cleanup has begun.

 DEC Memo: Tank test failure by Robert Patrick at Brothers Prof Tank Testing.ABC Tank will make repairs and Mr. Patrick will retest the tank next week. Once the tank passes, Mr. Patrick says he will contact DEC to close out the case.8/8/16-Vought-Received call from Donna (ABC Tank) to review faxed report sent in on 7/19/13. Vought reviewed PBS Registration (#2-252425) that showed one 8000-gallon #4 fuel oil AST "in contact with Soil" and owner of tank was:Florence EdelsteinAttn: 1781 Riverside Realty, LLC.2207 Coney Island AvenueBrooklyn, NY 11223Ph: (718)627-7177As per report tank tested "tight". Vought called and spoke to Donna and cause of spill was a crack in the vent line which was replaced and as vent line does not contain oil, there was no spill associated with test failure. Spill closed by Vought and Spill Closure Letter sent to above address with cc to Donna and closure letter and report added to E-docs.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEMO"12/30/02 TJDClosure request received from Eastmond. Request is one page letter which pertains to another spill event (0102593)which has been closed in database. Demeo left message for Rene Lewis (Eastmond) requesting summary of activities, laboratory data and disposal manifests specific to Spill #0105052.08/04/2005: Fax sent to Rene Lewis of A.L. Eastmond requesting information on spill. M.Brand NYSDEC DER Albany.08/19/2005: Next step - attempt to obtain correct spill closure report from Rene Lewis of Eastmond & Sons Boiler Repair. See paper file. LNK.11/08/2005: Contacted Petroleum Tank Cleaners, Inc. (718-624-4842, Lisa)regarding spill 0105052. Original spill for property (0102593) occurred in June 2001, spill was cleaned up by A.L Eastmond and Petroleum Tank Cleaners between 06/08 and 06/27 (invoice from Petroleum Tank Cleaners and letter from Eastmond in file). Tank was apparently not removed during the initial spill cleanup. The first spill (0102593) was deemed to be properly cleaned up by Region 2 Spills staff and closed 10/12/2001. Later spill (0105052) occurred in August 2001 due to a tank overfill (apparently from a fuel delivery to the original tank). PBS database indicates old tank was removed on October 11, 2001, new 5,000-gallon tank installed October 25, 2001 (NYC building permit issued 10/23/2001). PBS seems to be up to date, registration expires 04/2006. Updated Contacts:Owner - Pinnacle Management Company One Penn Plaza POB 1919 New York, NY 10119 212-564-2111 fax 212-695-4848Summitt Transportation - no current info available, telephone not valid.Petroleum Tank Cleaners, Inc.236 Butler StreetBrooklyn, NY 11217718-624-4842 fax 718-858-4268(Contact: Lisa, Isaac Mungra no longer with company)08/18/2006: No additional information, spill site needs to be inspected to determine if cleanup is complete. Transferred back to Region 2. M.Brand NYSDEC DER Albany.10/2/09 - Austin - Spill transferred from Albany staff to Ketani, for further investigation - end10/7/09 - Raphael Ketani. Presently, there are no E-docs.The spill happened on 8/9/01 as an overfill to the original tank. Spill was called in by Isaac Mungra of Petroleum Tank Cleaners (718) 624-4842. Jose Lopez (917) 777-0404 was the building manager at the time.According to Property Shark, the site is a large, brick veneer, 6 story apartment building that was built about 1920. The

S105135076

block and lot are 2170 and 96. Broadway Realty I Co., LLC sold the property to Hillside Realty Co., LLC on 1/11/99. Alternate addresses are 4526 to 4536 Broadway. The PBS registration is #2-331856. There was an original 5,000 gal. tank AST that had #6 oil. It leaked earlier in 2001 (see spill case #0102593) and lost 1,000 gals. into the tank room and the boiler room. About 800 gals. was recovered. The tank was removed on 10/11/01. The case was closed 10/12/01. A new 5,000 gal. tank was installed on 10/25/01 and is listed as containing #6 oil, but the spill report lists 200 gals. of #2 oil as having been spilled. The present spill case was the result of a delivery to the old tank by mistake, which hadn't been removed yet. I tried to find Summitt Transportation in the phone books and on the internet, but I couldn't locate the correct company. I contacted Lorraine ((212) 564-2111, ext 3118) in the Building Violations Dept. of Pinnacle Management. I explained to her that the DEC didn't have any documentation proving that the 8/9/01 spill had been cleaned up. She said that she will look into the matter and get back to me. 12/15/09 - Raphael Ketani. I made an unannounced site visit. So I called up Mark Barhorin (646) 210-7142, the property manager. He called the super and told him to meet me in the lobby. I met the super., Mr. Mrsad (646) 529-3638. He said that he wasn't the super. at the time of the spills. He showed me the boiler room. It was odor free with no signs of the previous spills. There was no oil in the sump (see E-docs). I asked him to show me the tank room, but we couldn't find it. I left after this. Lorraine called me back. She said that she couldn't find any documentation regarding the latter spill. As the previous spill (#0102593) had been cleaned up (see E-docs for PTC invoice and Eastmond Closure Report), and as there were no signs of the oil that had entered the boiler room during the latter spill (#0105052), and as there was no oil in the sump, and as there were no oil odors, I have determined that there is no threat to people or the environment. Therefore, I am closing the spill case.

Remarks: driver overfilled the tank - company has returned and is pumping out the basement at this time

DEC Memo:

9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 10/31/06 - Raphael Ketani. No record was found. The last known contact was John Weatherow at (718) 595-6700. This may be a NYC DEP number. The tank was tested and it failed. It was assumed or determined that 1000 gal. of #6 oil was lost. The incident was reported to DEC by the NYFD (no phone number). Cleanup was taking place via a collection tank and Winston Contracting was doing the repair. A 10/1/93 plan was prepared to either replace or abandon the existing tank. The responsible party is Inwood Tower. The address does not show up in the NYC Property Tax Records or Property Shark. According to Map #1 in the Hagstrom, Fort George Hill is not the official name of the street in that part of Manhattan. The official name is Saint Nicholas Avenue with Fort George Hill in parentheses. The zip is 10040 and the phone is (212) 567-0264 from the 2006 Manhattan White Pages phone book. However, this is a FAX number. So I sent a Faxed letter and a certified mail letter. I checked for a PBS record. The PBS case is #2-210684. The address is Inwood Tower Inc., 11 Fort George Hill, NY, 10040. There are 3 tanks. Two are in service and are 12000 gal. each with #2 oil and #6 oil. The third is listed as temporarily out of service and is 15000 gal. with #6 oil. Maybe this is the tank that leaked. There is a working phone number at (212) 567-0104. I left a message. I sent a FAX to (212) 567-0105. A little later, Lenny DeLuca of Century Management (212) 560-6450 (cell (917) 494-9845) called me. He asked when this spill happened. I told him and he commented that everyone from that time has left the building and he didn't think that any records were left from that time. I told him that either he finds some documentation or else the co-op will have to do some soil borings to see whether there still is contamination. He said that might cost thousands of dollars. I told him it probably would, but I don't have any documentation that any cleanup was done and so I don't have any recourse. He said he will try and find out what he can and he will get back to me. 11/3/06 - Raphael Ketani. Michael Jaffa of Jack Jaffa & Associates (718) 855-6110, ext 116 called me up. He said his company helps Century Management resolve various management issues. He said he received the DEC 10/31/06 letter ordering that an investigation be done. I told him some type of investigation must be done as the DEC doesn't have any documentation verifying that the spill had been cleaned up. He said he will try to look for the old records, but if he doesn't find any, then he will need time to hire a contractor and get the investigation going. I told him that I will give an extension to the deadline. 1/16/07 - Raphael Ketani. I contacted Mr. Jaffa and asked him why DEC hasn't received any documentation regarding the oil spill. He said that Mr. DeLuca was the one who was supposed to send the documentation to him. I tried to call Mr. DeLuca, but could only leave a message. Mr. DeLuca left a voice mail. He said that he spoke to Petroleum Tank Cleaners (PTC; (718) 624-4842) and they put together a proposal. He added that he is meeting with the co-op board on Monday (1/22/07). His cell is (917) 494-9845. 1/24/07 - Raphael Ketani. Kal Parikh (212) 480-7240 of the NYS Division of Housing called to say that he is working with Inwood Tower (the co-op) because it is a state subsidized housing project. He said that he thought he could get ahold of all of the records for the cleanup of the site, but they are presently in an archive which is being cleaned of asbestos. Because of this, he won't be able to get to the records until sometime in April 2007. He asked whether DEC could wait that long. I said that we could. He said he will look at

INWOOD TOWER (Continued)

S106703569

the files and send me what he finds.2/1/07 - Raphael Ketani. Mark Salamack of PTC called to say that his company has not been hired to do the investigation. He said that Mr. DeLuca merely inquired as to the price for the investigation. Mr. Salamack said that PTC wants a large downpayment and so Mr. DeLuca may not hire PTC.4/5/07 - Raphael Ketani. I tried calling Mr. DeLuca, Mr. Parikh and Mr. Jaffa, but could only leave messages stating that the DEC hasn't heard anything from them as to the existence of documentation verifying that the spill was cleaned up, or that they are doing a new investigation. I added that if DEC doesn't get word by next week that something is happening, then the case will be referred to the Div. of Legal Affairs of Region 2.4/10/07 - Raphael Ketani. Mr. DeLuca tried to return my call and left a voice mail stating that the Division of Housing was still looking for the archived records for the spill. I left a message that it has taken too long to search for the records and that the DEC is now ordering that drilling and sampling take place. I left the same message for Mr. Jaffa. I contacted Mr. Parikh and he said he had the archived records in hand. I told him to send me the documentation very quickly regarding the oil spill and the remediation. He said he would. 4/11/07 - Raphael Ketani. Mr. Parikh called and left a voice mail. He said that the archive will send the files for the site in a few days.4/12/07 - Raphael Ketani. Michael Jaffa of Jack Jaffa & Associates called to say that his company is not involved in the project to investigate the oil spill. He added that Century Management will have to do the project on their own.4/18/07 - Raphael Ketani. Mr. Parikh called and left a message yesterday. He said that the archive could not provide the documents for Inwood Tower. I tried to call Mr. DeLuca (212) 560-6450 (cell (917) 494-9845) today, but could only leave a message. I stated that Century Management has to arrange for some soil borings at the site and have this done very soon as there are no documents available to prove there is no contamination in the subsurface. Mr. DeLuca called me back. He said that there may be analytical results in a drawer in the office of the co-op. He said that there will be a board meeting on 4/23/07 and he will look for these documents then.5/10/07 - Raphael Ketani. Mr. DeLuca called me and said that he met with the co-op board. He said that everyone agreed to hire a consultant and to have soil sampling and testing done.6/22/07 - Raphael Ketani. I tried to contact Mr. DeLuca at his office and at his cell, but could only leave messages.7/9/07 - Raphael Ketani. Mr. DeLuca called me to say that he found a package of documents from 1995 and earlier at the site. He said that they document the recovery of oil at the site and the rental of equipment. He said that the package is extensive and so he can't review it completely. I asked him to send me a copy of it. He said he will. I told him that this may be enough to close the case. He said that he met with the board and they have given him permission to hire an expediter to resolve the matter, in the event that the documentation is insufficient. Mr. DeLuca called me back. He said he had a document showing that one tank was replaced. I told him to send me that, too. 8/14/07 - Raphael Ketani. I spoke to Mr. DeLuca and asked him where the package of documents were. He said his secretary had sent it out a long time ago. I told him there was nothing on my desk and nothing in the paper file. He said that he will talk to his secretary on monday, 8/20/07, and find out from her what happened. He added that, if necessary, he will send it out again.8/23/07 - Raphael Ketani. Mr. DeLuca (cell (917) 494-9845) called to say that his secretary is back and she isn't sure where she

S106703569

mailed the copies of the documents. He asked me to send him Region Two's mailing address and he will send them again. I e-mailed the regional mailing address. 9/24/07 - Raphael Ketani. I received a set of documents while I was away during the first two weeks in September. The documents are from Elm Management Associates, Inc. and date from 1994 to 1997. The documents concern monitoring and cleanup of a leaking oil tank. This also involved repair and maintenance of the oil/water separator, the recovery pit, heat wrapping for the discharge line from the separator, removal of collected oil, oil tank cleanup, and replacement of the old tank with a new 12,000 gal. tank by A.L. Eastmond. In the package with the January 27, 1997 cover letter from Elm Management is a letter from ARCH Consulting Co. dated November 1, 1995. This letter from ARCH Consulting Co. states in the bottom paragraph that they have received building plans which show that the floor slab rests on the bedrock. This suggests that the oil went into fractures in the bedrock. Where these fractures go and how deep they are is unknown and probably untraceable as the fracture systems in the bedrock in Manhattan are complex. There were no documents indicating that soil borings were performed to investigate the extent of the contamination, nor manifests for contaminated soil removed. I called up Mr. DeLuca to let him know that he still has to provide this information to the DEC. He said he will look for it. I also asked him how many tanks are in the building. He said just one. I told him 3 are listed on the PBS. He said that is wrong. I told him that the PBS registration has to be changed or else the spill case can't be closed. 9/25/07 - Raphael Ketani. Mr. DeLuca called and said he talked to the super at the building. The super told him he wasn't there when the original tank leaked. However, the super confirmed that there is only one tank presently and it is above ground on stilts. Mr. DeLuca said that he will meet with the board tonight and ask the board if they know anything about the origin of the spill for this case and what exactly happened. He said he will take pictures of the tank and the basement to show the present conditions and he will send me the pictures. 10/11/07 - Raphael Ketani. I spoke to Mr. DeLuca. He said that he had pictures to send me of the AST tank that is in use and the tank room. He said that everything is clean and in good condition. I asked him whether he had talked to the Board. He said "Yes," and that the president of the Board remembers that there was a spill, but not much else. I told him that DEC still doesn't have a revised PBS registration, nor any evidence that the oil was cleaned up. I told him that borings will need to be done. He said that he needs to talk to the Board again and see if he can get more information regarding the spill. 10/12/07 - Raphael Ketani. As there has been no progress in resolving the spill case in one year's time, I sent a modified CSL to Mr. DeLuca. The CSL requested the revision of the PBS case to correctly reflect the tanks that are on site, an inspection of the 15,000 gal. UST to prove that it was abandoned properly, and to abandon it properly if it hasn't been done, and to do borings around the tank to determine whether contamination still exists in the subsurface and how much contamination exists. I gave Mr. DeLuca and Inwood Tower 4 weeks to submit the report. 10/18/07 - Raphael Ketani. Mr. DeLuca delivered 8 pictures of the AST and the tank room. The pictures show that the place is clean and in good condition. 10/24/07 - Raphael Ketani. I tried to contact Mr. DeLuca (212)560-6450/cell (917)494-9845 to see if he had hired a spill cleanup company, but could only leave a message. 11/7/07 - Raphael Ketani. I tried to contact Mr. DeLuca via his office phone and his

INWOOD TOWER (Continued)

S106703569

cell phone, but could only leave messages. The PBS registration still has not been corrected. 12/18/07 - Raphael Ketani. Mr. DeLuca called and told me that he had a consultant with him who will do the investigative work. He put Alex Nadolishny (212) 290-6323 on from CES Environmental Consultants. I explained to Mr. Nadolishny that DEC wanted soil borings and soil sampling to be performed below the floor of the 15,000 gal. tank. I told him that the first step is for everyone to meet at the site and pick out the boring locations. We tentatively set up 1/2/08 and 1/3/06 as the meeting date. Mr. Nagolishny will get back to me. I told him to do so very soon. He said he will. 1/11/08 - Raphael Ketani. I met with Mr. DeLuca, Mr. Zygmunt (the super), Henri Gleizer (vice president of the co-op board), and Alex Nadolishny. LTB of CES Environmental & Training Center (212) 290-6233 (cell (917) 299-0551). They showed me the location of the underground tank that had failed. The tank is under the macadam pavement of the north end of the parking lot, just outside the basement back entrance. Then we examined the slope to the north of the parking lot which is just below the building and adjacent to 17 Ft. George Hill. There was no sign of an oil spill, nor any odors. The slope was covered in shrubs and grass. There was a mixed soil/fill cover. There were boulders of native material, but it wasn't clear whether they were sitting on an outcrop just below or if they had been placed there since construction of the building. We discussed what needed to be done. I told them that DEC wanted 5 new borings. One between the tank and the building, two just north of the tank and two just inside the chain line fence. There was one old well still in place. I told them to use this well, too, as an observation well. I took 10 pictures. After this, I left. 1/16/08 - Raphael Ketani. I sent a letter to Mr. DeLuca and to Mr. Nadolishny requesting that Inwood Tower do 5 soil borings, 3 around the tank and 2 next to the fence. 1/24/08 - Raphael Ketani. I spoke to Mr. DeLuca (917) 494-9845. He told me that Mr. Nadolishny is on vacation and will be back on 1/28/08. He said once he is back, then the plan submitted by DEC will be reviewed. He said Mr. Nadolishny will be in touch with me. 1/29/08 - Raphael Ketani. Today I was sent the following e-mail as a "c-c" by Mr. Nadolishny: Dear Mr. De Luca: We have coordinated the schedule for the subsurface sampling work at the 11 Fort George Hill with the drillers and Zigmund and have set the date to February 14th. The work will start at 08:00 and should be completed before 17:00. Please advise if 08:00 is too early as Geoprobe drilling produces some noise. This may become a factor after approximately 30 min of preparatory work after driller's arrival. Also, we will need to block off at least four parking spots (two for each of the proposed boring locations along the fence). Please coordinate with Zigmund to ensure that the locations are not taken by the cars; this is very important to ensure access for the drill rig and prevent any possible damage to the tenants's vehicles. The utility mark-outs will be scheduled for the next week. I will visit the site prior to the 14th to ensure that all utilities are marked. 2/21/08 - Raphael Ketani. Mr. Nadolishny called to say that they received the analytical results for the soil samples that were taken. He said that there are very few VOCs and the SVOCs are below TAGM. He said that no water was encountered, though they did sense some moisture at 18' below grade. He said that oil odors were also sensed at 18' below grade. This is where the soil samples were taken from. He asked what else needs to be done. I told him to send the analytical report, check out that the tank has been abandoned properly - and if not,

INWOOD TOWER (Continued)

S106703569

then abandon it according to the regulations and laws, and update the PBS registration to reflect that the 15000 gal. tank is abandoned in place and the 12000 gal. tank is in service. He said he will do this. 3/3/08 - Raphael Ketani. I spoke to Mr. Nadolishny (917) 299-0551. He said that he has obtained paperwork showing that the 15000 gal. tank was cleaned out and filled with cement. I told him to send DEC copies of this paperwork. I told him to include the paperwork as part of the report. I asked him about the PBS registration. He said he will fill out the form and have a member of the co-op board sign it. I told him to make sure that DEC's PBS Unit gets the form with an original signature. He said he will see to it. 3/21/08 - Raphael Ketani. I tried to contact Mr. Nadolishny and Mr. De Luca regarding the submission of the closure report, but could only leave messages. 3/24/08 - Raphael Ketani. Mr. Nadolishny returned my call. He said that he has all of the paperwork together and that Mr. DeLuca will sign the papers. Once the papers are signed, then the report will be mailed. I called up Mr. Nadolishny and asked him how ready he was to send the paperwork and closure report. He said that the PBS form is properly filled out and the check for filing has been given to him. He said that the rest of the report just needs Mr. DeLuca's signature. Then it will go out. 3/25/08 - Raphael Ketani. Today I received the subsurface investigation report dated March 14, 2008. I reviewed the report. The analytical results for the four successfully installed borings (SB-01 to SB-04) were included in the report. There were virtually no hits for VOCs or SVOCs for the soil samples from SB-01 to SB-02. SB-03 and SB-04 each had a number of VOC and SVOC hits, but the results were well below TAGM limits. The boring logs for SB-03 and SB-04 indicate oil contaminated soil at depth (14' to 18' for SB-03 and 12' to 15' for SB-04). This is not surprising since these two borings are next to the failed UST. SB-03 had wet sand at 18' to 20' and was turned into a well. No other borings encountered water. Mr. Nadolishny included 42 high quality photos, but he didn't include a caption for each photo. So it is difficult to know what the pictures are showing. He included the PBS registration form with the report. I made a copy of the form for the report and forwarded the one with the original signature to Nick Lombardo of the PBS Unit. Based upon the information in the report, it is clear there is some residual oil next to the old UST. However, given the small area next to the tank, the depth of the residual contamination, the fact that it is #6 oil, and the limited extent of the contamination, I would not order the owners to dig up the oil. I left a message for Mr. Nadolishny asking him to explain each picture he took, whether the tank was abandoned properly, and whether he collected a groundwater sample. I tried to contact Mr. DeLuca regarding the tank abandonment, but could only leave a message. I had spoken to Mr. Nadolishny (917) 299-0551 on 2/21/08 and on 3/3/08 regarding documentation that the tank had been abandoned properly. During our 3/3/08 conversation, he said he had the abandonment paperwork. My letter of 10/12/07 also requested documentation of the abandonment. This and the PBS issue are the only things holding up closing the case. Mr. Lombardo of the PBS Unit informed me by e-mail today that the PBS application was no good. The Federal Tax I.D. was different than on the present record, they owe \$1000, and they list tanks #2 and #3, not #1 and #2. He will notify them by mail as to what they have to do. 3/26/08 - Raphael Ketani. Mr. Nadolishny responded to my phone messages with an e-mail he sent today. He wrote that he could not recover groundwater from the well at SB-03. He believes it's perched water. Also, he will put

Remarks: together the tank closure documentation and the captions for the photos and send them to me. 4/30/08 - Raphael Ketani. I checked the PBS registration. They have 3 tanks listed. Tanks one and two are 12,000 gals. and in service and tank three is temporarily out of service. I called up Mr. Nadolishny and left him a message that this was wrong and to call me to straighten out the registration. I also contacted Mr. DeLuca and told him the registration was incomplete and so the spill case will not be closed. He told me that he will see Mr. Nadolishny later in the day and will give him another check for \$500 (total \$1,000). 5/15/08 - Raphael Ketani. I reviewed the PBS registration #2-210684. It shows the 15000 gal. tank as closed in place and two 12000 gal. tanks. The registration is still incorrect as there should be only one 12000 gal. tank registered. The closure date (12/30) for the 12000 gal. tank belongs to the 15000 gal. tank. I asked Nick Lombardo of PBS to correct the registration. Based on the subsurface investigation report dated 3/14/2008 and the PBS registration, I am closing the spill case.

INWOOD TOWERS DETERMINED (BY TT) THAT IT HAD A LEAKING UST. A 10/1/93 PLAN TO REPLACE TANK/ABANDON OLD UST. CLEANUP CONTINUES VIA COLLECTION TANK ON HILLSIDE BY WINSTON CONTRACTING. RP ASSUMING BILLS. Not reported

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"3/5/2004 Spill switched from Mulqueen to SangeslandSangesland spoke to Mark at PTC about closing out the spill. The building now has a new owner and there are no records of the cleanup from 1996. At that time there was a 7,500 gal tank which leaked. This tank was removed and a new 9,000 gal AST tank was built in this room.To close out this spill number, PTC was directed to drill several soil borings in the floor to look for contamination. If these borings are clean, then PTC will put together a report with results along with photos and a request for closure.3/16/2004 Ray (PTC) asked if contamination was found in the borings would a new spill number be required? Sangesland said no just an update to this old spill number would be required.4/26/2004 Sangesland reviewed a

DEC Memo: 5/2/08 Sent ttf letter to:Carmen SantiagoThe Dermot Company1775 Broadway, Suite 510New York, NY 100191/15/09. J.Krimgold reviewed the letter-report submitted by Approved Oil Company of Brooklyn and dated 12/13/08. According to this letter, the tank is aboveground and was tested to to satisfy private requirements. The cause of the failure was a suction line which was at some time back temporarily replaced by cooper tubing leaving a gap in the tank topping. After replacing cooper tubing with permanent pipe the tank system was retested and passed. NFA. J.K.

Contact Name: SUPER
Contact Phone: (646) 721-4388
DEC Memo: 4/12/06 - Raphael Ketani. I called up (646) 721-4388, but it turned out to be a non-working cell number for a daughter of the super. I called up HESS and spoke to Mr. John Emms (201) 489-5100. He said that he sent out 2 of his own guys 4/17/06 - Raphael Ketani. I tried to contact the super, Mr. Grullon, at (917) 604-1500, but could only leave a voice mail message. Next, I tried to call Ultra Holdings at (212) 974-8546, but could only leave a voice mail message at their general mail box. Adriana Tejada, one of the daughters, called me back to say that PTC cleaned up inside and outside, but she didn't know how well things were done. I asked her to check. She said she would and will call me back. I asked her how bad the odors are in the building. She said that she didn't smell anything. I spoke with Joe from PTC (718)624-4842. He said that oil leaked out the vent line and the manhole on the tank. He said that the tank needs a new vent line, but the manhole just needed to be tightened. Joe added that they cleaned up oil soaked debris behind the tank. I asked if PTC power washed the floor. He said that HESS has its own crew that does that. I called up Mr. Emms and he said that Customer Service (800-242-4377) is now in charge of the spill case and they will get back to me. Ray Soika of HESS called me back and said that they power washed the sidewalk, put down material to absorb the oil in the tank room, and removed oil soaked debris. He said that he didn't power wash the tank room because the distance to reach it with hoses was too long. I asked him for a letter to this effect with all of the necessary information. He said he will send it to me. 6/16/06 - Raphael Ketani. I tried to call Mr. Soika, but he was on vacation. Mr. Steve King talked to me and said he would try to find the cleanup report and send it to me. 6/30/06 - Raphael Ketani. I called up HESS and asked where the cleanup report was. I was connected with Eric and he said the report was sent out 6/20/06. I told him I would keep an eye out for it. 7/18/06 - Raphael Ketani. I tried to call Eric of HESS Customer Service, but could only leave a message. 7/19/06 - Raphael Ketani. Eric called me back. He said he would FAX the invoice from PTC for the cleanup work and the manifests. He said that no drains or sewers were affected and that there were no cracks in the floor in the vicinity of the tank. I received the PTC invoice for the supplies and manpower needed to cleanup the spill and two manifests for removal of oil and removal of oil contaminated material. Based upon these documents and my conversation with Eric today, I am closing the

vault. found oil stain on broken concrete floor of adjacent room. site has one 5000 gal #6 oil tank sitting on floor. tank is being supported by (three) saddles on sides. found oil inside tank vault area. oil stain on wall from where fill line enters into tank vault. sump outside of tank vault room was impacted, but no free product found during site visit. met PTC crew on-site. they will do powerwash today.alternate address: 1631-1639 St Nicholas AvePBS #: 2-284106inspected fill and vent line location. fill box is located on sidewalk along St. Nicholas Ave. in front of Liranzo's Food Market at 1633 St. Nicholas Ave. found overflow at the vent pipe and oil spilled inside through cellar door.Miguel Grullon **building super**Ph. (212) 740-8068Liranzo's Food Market **impacted basement near vent pipe**1633 St. Nicholas AVENew York, NYContact: Raphael LiranzoPh. (212) 927-5371property owner (according to PBS record):192nd Street Realty LLC.1841 Broadway, Suite 1000New York, NY 10023Attn: Blanca BuduenPh. (212) 974-8433x208DEC requires: 1) immediate tank test, 2) cleanup inside basement at Liranzo's food market, 3) soil investigation under sidewalk along fill line11/24/08-Vought-Called and spoke to PTC Joe Ostrowski and he stated that crew was onsite today powerwashing and he felt that fill line was leaking and new tank may be needed as well and agreed with DEC requirement of immediate tightness testing. Vought called 192nd St Realty (Blanca Buduen 212-974-8433x208) and spoke to Buduen and faxed her CSL. Vought received call from and spoke to PTC Salamack and he suggested that gauge failed test last summer.12/1/08-Vought-Spoke to DEC Ajoku who is manager of open TTF spill #0807695 at same location who will perform PBS inspection for possible violations.12/15/08-Vought-Spoke with DEC Ajoku who spoke with Buduen who denied receiving letter dated 11/24/08 and original CSL, required proof of identity of DEC Ajoku and hung up phone. Vought left message for Buduen to return call.04/14/09 : Consequent upon review of the report documents dated March 3, 2009 which was prepared and submitted by PTC, DEC deems it fit to close the spill number associated with this facility. Full detail of the report can be found in the cross referenced spill number 0807695 which is equally closed. (MA for Vought).

Remarks:

Sill pipe corroded; about 40 gallons spilled ; Petroleum tanks cleaning up spill

Broadway, Suite 510New york, NY 10019Letter from True Blue
Environmental dated Aug 13, 2008 says this site is "Very Bad" see
eDocs.11/3/08 Recieved letter on 10/27/08 from Robert Urban of Pro
Test. Tank failed with a dry leak. Cut in top of tank was repaired.
Tank passed test on 8/29/08. Letter did not address contamination
found (if any). Sent request for contamination discussion in tt
return letter that was sent today to:91 Post LLCaccord Realty
Rervices, Inc.55 West 45th Street, 7th FloorNew York, NY 10036 Letter
also need clarification on gw determination and tank is registered as
AST, but is UST. Information correction application included.
bf8/6/12 Received call from E. Underwood of Dermot Company. He wanted
any available info on the spill case since he was not with Dermot at
the time of the incident. Carmen Santiago is no longer with the
company. I emailed the May 2008 ttf letter to:
eunderwood@dermotcompany.com. Sent him a second e-mail attached with
the letter from ProTest regarding the repairs which does not address
the contamination found (if any). bf8/6/12 received e-mail with
attached letter from ProTest regarding petroleum contamination. None
found. NFA. bf

DEC Memo: On site super/manager "Alicia" 914-441-2806PBS # 2-277789 ***PBS still lists former owner***Property was sold Dec.22, 2005 and new owner is:Lawrence Realty - 718-599-2047 (let ring 20 times)150 North 9th St Brooklyn, NY 11211Manager: Daniel Andrejczuk08/24/09 I responded to the site being directed by RSE.A 3,000 gallon vaulted AST leaking slowly in the vault.Oil escaped out of the vault through the bottom of the vault.They put down plenty of speedy dry under the tank and outside of the vault to prevent oil migration.I net onsite manager Alicia and asked her to have a contractor immediately to empty the tank. She said they hired ABC tank and ABC will empty the tank and clean the spill Monday. I told her that tank needs to be emptied immediately as it was leaking actively.She tried to call her office and informed me that PTC will be at the scene in the evening to empty the tank. She left the scene without saying anything and never picked up the phone again.Being failed to inspect the boiler room, I called PTC and they confirmed me that crews are enroute to the site.I asked them to inspect the boiler room also to look for any drain/cracks.This morning i called PTC again and they told me the tank was emptied and PTC will be doing the clean up.Spill clean up letter was sent to(via fax also @718-599-0046)Lawrence Street Corp.150 North 9th StreetBrooklyn, NY 11211Attn: Daniel Andrejczuk(sr)09/02/09 I spoke with Alicia today and she told me that the spill has not been cleaned up yet, they hired a new company to do the clean up but could not give me the name of the company.(sr)10/02/09 Rec'd closure report.Clean up was done by Enviro Waste. Disposal manifest and pictures of cleaned floor was provided.Report in edocs.(sr)

Spiller Phone: Not reported
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 82791
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL."This spill case was reassigned from DEC (Sigona) to Rommelon 02/10/2004.Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned.8/15/07 - Haggerty - Assumed management of site10/10/07 - Haggerty - approved Subsurface Investigation Work Plan11/19/07 - Haggerty - spoke with Jake Lauford, Esq. (212-422-8500) who represents the owner of RG Ortiz Funeral. The current funeral parlor and parking garage sit on the former Exxon gas station. Kleinfelder needs access to install 1 MW on-site, 3 more MW's are on the adjacent sidewalks. I assured him Kleinfelder is a competent consultant and we will do our best to limit any inconvenience to the property and business.1/3/08 - Haggerty - spoke with Shan Zuidema from Kleinfelder (845-567-6530). Property owner is requiring all work be done at night. Shan and I agree it isn't safe to have personnel working during January or February at night. Implementation of work plan will not proceed until March.9/10/08 - Haggerty: Spoke with ExxonMobil/ Kleinfelder concerning the work plan. The current owner of the site still will not grant access to install the one on-site well. The other 3 wells are in the sidewalk. PM agreed to remove the on-site well from the investigation.9/24/08 - Haggerty: PM on-site for the installation of MW-1. Slight staining encountered at the water table interface. MW-2 and MW-3 installed with no evidence of contamination. 1/02/09 - Haggerty: SIR reviewed, no soil contamination above standard. MW-1 Total BTEX 16ppb. PM would have closed spill at that time, but the dissolved lead concentrations in groundwater were elevated (810ppb). PM required groundwater sampling for RCRA 8 metals to see if this is a localized condition from the native soil or organic lead from the previous use of the site as a gas station. 3/20/09 - Haggerty: reviewed SIR Addendum, all RCRA 8 metals below standard. Most likely, turbidity of the original samples caused the elevated lead levels. This time, Kleinfelder used low-flow technique to collect the gw samples. The last samples were collected with a hand bailer. Spill closed

Remarks: DEC INVESTIGATING, Product REMOVED AND THE TANK WAS TAKEN OUT OF SERVICE

DEC Memo: 5/2/08 bf: This tank is not registered. I called Carmen Santiago, property manager, (646)673-6714 and she confirmed that the tank is not registered. I notified her that they are in violation for not registering the tank. I told her I will be sending a ttf letter today and include an application, but she should register the tank asap. Sent ttf letter to; Carmen Santiago The Dermot Company 1775 Broadway, Suite 510 New York, NY 10019 5/6/11 Today received letter and passing ttf. Tank failure was due to vent line. No evidence of contamination found. NFA. bf

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 01/09/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 04/21/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA

Number of Days to Update: 78	Next Scheduled EDR Contact: 04/21/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/08/2013	Telephone: 703-603-8704
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 01/10/2014
Number of Days to Update: 151	Next Scheduled EDR Contact: 04/21/2014
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/10/2013
Date Data Arrived at EDR: 10/02/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2014	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 03/10/2014
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/23/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2014	Telephone: 703-603-0695

	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/01/2013	Telephone: 202-267-2180
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 02/07/2014
Number of Days to Update: 66	Next Scheduled EDR Contact: 04/14/2014
	Data Release Frequency: Annually

State- and tribal - equivalent CERCLIS

NY SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 11/13/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 11/13/2013	Telephone: 518-402-9622
Date Made Active in Reports: 11/18/2013	Last EDR Contact: 02/19/2014
Number of Days to Update: 5	Next Scheduled EDR Contact: 06/02/2014
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

Date of Government Version: 04/17/2012	Source: New Jersey Department of Environmental Protection
Date Data Arrived at EDR: 05/31/2012	Telephone: 609-292-8761

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 11/13/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 11/13/2013	Telephone: 518-402-9711

State and tribal Brownfields sites

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Date of Government Version: 11/13/2013	Source: Department of Environmental Conservation

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Land Records

LIENS 2: CERCLA Lien Information

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

NJ LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

NY HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

Number of Days to Update: 13	Next Scheduled EDR Contact: 06/23/2014
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: No Update Planned

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 11/01/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/12/2013	Telephone: 202-564-8600

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2011	Source: EPA/NTIS
Date Data Arrived at EDR: 02/26/2013	Telephone: 800-424-9346
Date Made Active in Reports: 04/19/2013	Last EDR Contact: 02/28/2014
Number of Days to Update: 52	Next Scheduled EDR Contact: 06/09/2014
	Data Release Frequency: Biennially

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NY SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Most Recent Revision: 1998

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Precambrian
System: Precambrian
Series: Paragneiss and schist
Code: Ym (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Metamorphic Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Langan Engineering, Inc. on Mar 24, 2014.

TARGET PROPERTY

4650 Broadway
New York, NY 10040

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Compliance Status (Open/Resolved) relates to whether a violation has been corrected/uncorrected. Dismissed violations do not require filing a Certificate of Correction.

ECB Hearing Status and the **ECB Penalty Due** are separate from **Compliance Status** (i.e. a penalty is still due in many cases even when the violating condition has been fixed).

Severity Class	
Class 1 - Immediately Hazardous	HAZ - Hazardous - 1968 Building Code
Class 2 - Major	NON-HAZ - Non-hazardous - 1968 Building Code
Class 3 - Lesser	

Violation Status Descriptions	ECB Hearing Status
OPEN - No Compliance Recorded	CURED/IN-VIO - In Violation/no hearing required
OPEN - Certificate Pending (Certificate of Correction submitted and under review)	STIPULATION/IN-VIO - No hearing required/in violation
OPEN - Certificate Disapproved (Certificate of Correction disapproved/not in compliance)	IN VIOLATION - Hearing decision completed
RESOLVED - N/A-Dismissed (at ECB - no Certificate of Correction required)	DISMISSED - Hearing decision completed
RESOLVED - Certificate Accepted (Certification of Correction Accepted/in compliance)	DEFAULT - Respondent failed to appear at hearing
RESOLVED - Cure Accepted (early correction accepted - in violation/no penalty or hearing)	PUBLICLY-OWNED - No hearing required
RESOLVED - Compliance Insp/Doc (condition verified by Inspector or by Dept. documentation)	PENDING - Awaiting ECB hearing or decision
	ADMIT/IN-VIO - In Violation/no hearing required
	WRITTEN OFF - Imposed penalty legally uncollectable

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

NYC DPD Affidavit in Lieu of Registration Statement

THIS INDENTURE, made the 6th day of April, 2005

BETWEEN BERMONT OPERATING CORP., a New York corporation,
having an office c/o Phillips Nizer LLP, 656 Fifth Avenue,
New York, New York 10103

Witnesseth:

party of the first part, and ACADIA-P/A SHERMAN AVENUE, LLC, a Delaware
limited liability company, having an office c/o Acadia Realty
Trust, 1311 Mamaroneck Avenue, White Plains, New York 10605

Witnesseth:

party of the second part,

WITNESSETH, that the party of the first part, in consideration of two dollars and other valuable consideration paid by the party
of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of
the second part forever,

All that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the
Borough of Manhattan, City, County and State of New York, bounded
and described as set forth in schedule A.

This conveyance is made with the unanimous written consent of
the stockholders of the party of the first part.

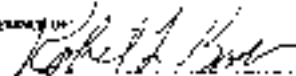

TOGETHER with all right, title and interest, if any, of the party of the first part, in and to any street and roads abutting the above-
described premises to the owner lines thereof. TOGETHER with the appurtenances and all the estate and rights of the party of the first
part in and to said premises; DO (GIVE AND GRANT) HOLD the premises herein granted unto the party of the second part, the heirs or
successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party first part will receive the
consideration for this conveyance and will hold the right to receive such consideration in a trust fund to be applied first for the purpose
of paying the cost of the improvements and will apply the same first to the payment of the cost of the improvements before using any
part of the trust of the same for any other purpose.

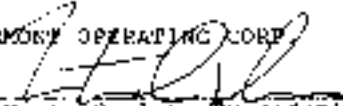

The word "party" shall be construed as if it read "parties" whenever the sense of this instrument so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

In presence of

BERMONT OPERATING CORP.

By: 
Monte Enjlet, President

SCHEDULE A
DESCRIPTION

All that lot or parcel of land, in the Borough of Manhattan, County of New York, City of New York, State of New York described as follows:

Parcel A:

Lot Numbers 1 and 4 in Section Number 8, Block Number 2175 on the land map of the County of New York, and bounded and described as follows:

BEGINNING a point on the easterly side of Broadway at the northeasterly line of said Lot Number 4;

RUNNING THENCE easterly, or nearly so along said Lot Number 4, 220 feet 5 inches to the westerly line of Lot Number 100 on said map.

THENCE 113 feet 8 inches southeasterly along said westerly line of said Lot Number 100 to the northerly side of Sherman Avenue;

THENCE westerly or nearly so along the northerly side of Sherman Avenue to a point thereon distant 204 feet 4-3/8 inches westerly from the westerly side of said Lot Number 100;

THENCE running on a curved line, 96 feet 9-5/8 inches to a point on the easterly side of Broadway, distant 130 feet 5/8 inch southerly from the northerly line of said Lot Number 4.

THENCE northerly along the easterly side of Broadway, 130 feet 5/8 inch to the point or place of **BEGINNING**. Be the said several distances, more or less.

Parcel B:

Lot Number 50 on a certain map entitled "Map of 128 acres of land situated in the 12th Ward of the City of New York, part of the Estate of Isaac Dyckman, deceased, known as Fort George Property", Dated September 15th, 1868 by R. Ross, Surveyor, and filed in the Office of the Register of the County of New York on November 7, 1868 as map number 697 and which said plot is bounded and described as follows:

BEGINNING at a point on the easterly side of Broadway or Kingsbridge Road, as widened, at the southwesterly corner of plot number 49 on said map.

THENCE easterly or nearly so along said plot number 49, 202 feet to plot number 53 on said map.

THENCE southeasterly along the said plot number 53 on said map and parallel with a new street laid out by the Commissioners of the Central Park and designated on said map as boulevard or Dyckman Street, 53 feet 3 inches;

THENCE westerly or nearly so and along plot number 51 on said map, 220 feet 5 inches to the present easterly side of Broadway or Kingsbridge Road, as widened;

THENCE northerly or nearly so along the said present easterly side of Broadway or Kingsbridge Road, 50 feet to the point or place of **BEGINNING**.

BEING known by the street numbers 4650/6 Broadway and 16 Sherman Avenue.

Resumes

Jennifer Armstrong, LEED AP

**Senior Staff Engineer
Environmental Scientist & Remedial Oversight**

11 years in the industry

Ms. Armstrong has 11 years of experience working on environmental projects in New York. She has conducted Phase I and II Environmental Site Assessments, remedial investigations, soil vapor and indoor air quality surveys, and waste characterization investigations. She has also developed remedial investigation and remedial action work plans and managed groundwater monitoring programs. Her field experience includes soil, soil vapor, and groundwater sampling, indoor air investigations, remedial excavation oversight, and Community Air Monitoring Program (CAMP) management. Ms. Armstrong also has several years of experience in evaluating asbestos consultants and contractors.

Mimi Raygorodetsky

Senior Project Scientist
Environmental Engineering

12 years in the industry

Ms. Raygorodetsky sources and directs large and complex environmental remediation and redevelopment projects from the earliest stages of pre-development diligence, through the remediation/construction phase, to long-term operation and monitoring of remedial systems and engineering controls. She has a comprehensive understanding of federal, state and local regulatory programs and she uses this expertise to guide her clients through a preliminary cost benefit analysis to select the right program(s) given the clients' legal obligations, development desires and risk tolerance. Her expertise consists of integrating the requirements of selected programs and client development needs to develop and design targeted and streamlined diligence programs and remediation strategies. Ms. Raygorodetsky is also highly skilled in integrating remediation with construction on large urban projects. She works with clients to develop construction bid specifications that clarify the remedial requirements for contractors and works with clients to appropriately evaluate bids and award contracts.

Specific skills include identification and evaluation of potential contaminant source areas; analysis selection and cost estimation of remedial alternatives; and identification and assessment of potential risks to stakeholders and development of risk management options.

1.0 INTRODUCTION

CNS Environmental Corp. (CNS) was retained by Acadia Realty Trust, LLC to conduct quarterly groundwater sampling for the property located at 4650 Broadway in New York, NY, referred to hereafter as the "subject site".

The subject site is improved with a two-story commercial building constructed c. 1925, located on the northeast corner of Broadway and Sherazan Avenue and currently occupied by a parking garage and a U-Haul Dealer. See Figure 1: Site Location Map.

2.0 BACKGROUND

Based on the findings of a subsurface investigation, gasoline contamination was identified within the groundwater at the subject site. Based on these findings CNS compiled and executed a NYSDEC approved Remedial Action Plan dated June 12, 2009 (NYSDEC RAP Approval Email dated July 10, 2009); bound under a separate cover, which consisted of the removal of Underground Storage Tanks (UST) and associated impacted soils, the installation of monitoring wells and utilized RegenOx™ chemical oxidizer injections, to effectively remediate the groundwater. Note: prior to the RegenOx™ application, CNS collected a round of groundwater samples from each monitoring well to establish a site baseline on March 12, 2009. Upon completion of the remediation, CNS submitted a Remediation Report (Remediation Report dated October 22, 2009 bound under a separate cover) and was subsequently directed by the NYSDEC to collect quarterly groundwater samples.

The previous rounds of quarterly sampling were performed on 9/30/2009, 12/29/2009, 3/29/2010, 6/28/2010, 9/30/2010, 12/30/2010, 3/29/2011, 6/28/2011, 10/7/2011, 12/28/2011, 4/13/2012, 9/29/12 and 12/31/2012.

Sometime after the 11th quarterly sampling event in December 2012, site contractors destroyed the installed monitoring wells on the subject site. CNS reinstalled the four (4) monitoring wells (MW1 through MW4) as well as an additional monitoring well (MW5) on September 9, 2014 in compliance with the approved June 12, 2009 RAP.

3.0 FIELD ACTIVITIES

On Friday, October 24, 2014, CNS collected groundwater samples from the five (5) existing monitoring wells MW1 through MW5 (See Figure II: Monitoring Well Locations). Prior to collecting the groundwater samples, CNS measured the depth to groundwater from the top of the well casings utilizing an electronic Kreck Water Level Meter.

Prior to sampling, the wells were purged of 3 to 5 well volumes utilizing a low flow submersible pump with disposable tubing. In addition, after the final well purge within each monitoring well, measurements for temperature, conductivity, pH, dissolved oxygen and oxygen-reduction potential (ORP) were collected, utilizing a YSI 556 Multi Probe System within non-chemically analyzed clean sample jars. See Table I for Groundwater Measurements.

The collected groundwater samples were collected in accordance with USEPA "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846) and analyzed for VOCs and SVOCs in

accordance with NYSDEC CP-51 Protocols under EPA analytical Methods 8260 and 8270. The groundwater samples were placed in laboratory supplied glassware, packed in an ice-filled cooler accompanied by a chain-of-custody documentation and delivered to Pace Analytical (NYSDEC ID# 10478) located at 575 Broad Hollow Road, Melville, New York 11747. See Appendix A for Laboratory Analytical Data Sheets.

The collected groundwater samples were compared against the NYSDEC's Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Groundwater Effluent Limitations (NYSDEC Groundwater Standards). A summary of the analytical results are presented in Table II.

4.0 GROUNDWATER MEASUREMENT PARAMETERS

As indicated in Table I, temperature levels ranged between 66.09°F through 68.46°F with an average temperature of 67.17°F. pH levels ranged between 7.95 through 8.01. Dissolved Oxygen levels ranged between 0.96 through 9.80 mg/l. Qualitative ORP levels ranged from -51.1 through -3.3.

No heavy metals were detected in Sept. 8, 2014

5.0 GROUNDWATER ANALYTICAL RESULT INTERPRETATION

The subject site's baseline groundwater sampling event occurred on March 12, 2009. Current analytical results were compared to the NYSDEC TOGS 1.1.1 GA values and are summarized herein within Table II on the following page. Analytical results associated with this sampling event are as follows:

MW1: The VOC constituents 1,2,4 -Trimethylbenzene (3,900 ppb), 1,3,5 -Trimethylbenzene (560 ppb), 4-Isopropyltoluene (9.5 ppb), Ethylbenzene (250 ppb), Isopropylbenzene (83 ppb), m&p-Xylene (2,100 ppb), n-Butylbenzene (44 ppb), n-Propylbenzene (190 ppb), o-Xylene (200 ppb), sec-Butylbenzene (13 ppb) and Toluene (27 ppb) exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. In addition, Total Xylenes was identified at 2400 ppb, Naphthalene at 130 ppb and Benzene at 46 ppb, exceeding their respective NYSDEC TOGS 1.1.1 GA value of 30 ppb and 1 ppb, respectively. The SVOC constituent Naphthalene was identified at 75 ppb, which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results, VOC and SVOC constituents have seen an overall decrease in concentrations with p-Isopropyltoluene no longer present, however, the VOC constituents Benzene, sec-Butylbenzene and Toluene were not identified in the baseline analytical results but were identified in the 14th quarter sampling event. When compared against the most recent prior sampling event, overall constituent concentrations have increased.

MW2: The VOC constituents 1,2,4 -Trimethylbenzene (71 ppb), 1,3,5 -Trimethylbenzene (23 ppb), Ethylbenzene (38 ppb), Isopropylbenzene (5.6 ppb), m&p-Xylene (140 ppb), n-Propylbenzene (7.7 ppb) and o-Xylene (6.7 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Naphthalene was identified at 14 ppb, which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results as well as the most recent prior sampling event, the VOC constituents have seen an overall decrease in concentrations with the exception of Ethylbenzene, Isopropylbenzene, m&p-Xylene, Naphthalene and o-Xylene slightly increasing from the baseline. The SVOC constituent Naphthalene is no longer present.

MW3: The VOC constituents 1,2,4 -Trimethylbenzene (1,500 ppb), 1,3,5 -Trimethylbenzene (390 ppb), Ethylbenzene (72 ppb), Isopropylbenzene (29 ppb), m&p-Xylene (2,000 ppb), n-Propylbenzene (72 ppb), o-Xylene (66 ppb) and sec-Butylbenzene (6.7 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Benzene was identified at 8 ppb, Naphthalene was identified at 38 ppb and Total Xylenes was identified at 690 ppb, exceeding their respective NYSDEC TOGS 1.1.1 GA values of 1 ppb and 10 ppb, respectively. The SVOC constituent Naphthalene was identified at 180 ppb, which exceeds its which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results, the VOC constituents have seen an overall decrease in concentrations with the exception of 1,2,4 -Trimethylbenzene and m&p-Xylene, which showed a slight increase. Additionally, the VOC constituent sec-Butylbenzene was not identified in the baseline analytical, but is identified in the 14th quarter sampling; however p-Isopropyltoluene is no longer present. The SVOC Naphthalene has increased from 65 ppb to 180 ppb, still exceeding its respective NYSDEC TOGS 1.1.1

GA value of 10 ppb. When compared against the most recent prior sampling event, overall constituent concentrations have slightly increased.

MW2: The VOC constituents 1,2,4 - Trimethylbenzene (17,000 ppb), 1,3,5 - Trimethylbenzene (230 ppb), 4-Isopropyltoluene (12 ppb), Isopropylbenzene (83 ppb), m&p-Xylene (14 ppb), o-Butylbenzene (60 ppb), n-Propylbenzene (160 ppb) and sec-Butylbenzene (12 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA value of 5.0 ppb.

Compared to the baseline analytical results as well as the most recent prior sampling event, VOC constituents have slightly increased with the exception of Ethylbenzene, o-Xylene and p-Isopropyltoluene, which are no longer present. Additionally, three new VOC constituents (4-Isopropyltoluene, n-Butylbenzene and sec-Butylbenzene) were identified exceeding their respective NYSDEC TOGS 1.1.1 GA values. The identified

MW5: The VOC constituent 1,2,4 - Trimethylbenzene was identified at 14 ppb exceeding its respective NYSDEC TOGS 1.1.1 GA value of 5.0 ppb.

MW5 is a new monitoring well installed on September 9, 2004; therefore, the 14th quarter sampling event will be used as the baseline analytical for future quarterly sampling events. The only VOC constituent identified was 1,2,4 - Trimethylbenzene exceeding its NYSDEC TOGS 1.1.1 GA value of 5.0 ppb.

6.3 CONCLUSIONS

Gasoline related contamination remains present at the subject site from the past underground storage tanks as observed within the past subsurface investigation and groundwater sampling completed by CNS. VOC contamination within monitoring wells MW1, MW2 and MW3 have decreased compared to the baseline sampling event, while monitoring well MW4 has seen an increase in VOC concentrations compared to the baseline sampling event. MW5 was installed on September 9, 2014 and identified one VOC constituent exceeding its NYDEC Groundwater Standard, which will be used as a baseline for future quarterly sampling events.

As indicated in Table 1, the groundwater measurement parameters of temperature, pH, dissolved oxygen and oxygen reduction potential (ORP) indicate favorable ranges for active oxidation and microorganisms; however, monitoring well MW1's dissolved oxygen has decreased since the baseline sampling event.

Due to exceedances of the NYDEC Groundwater Standards in monitoring wells MW1 through MW5, CNS will continue to monitor the groundwater contaminant levels at the subject site. The next groundwater sampling event is scheduled for January of 2015.

8.3 PROJECT LIMITATIONS

This report is written for the use of Acadia Realty Trust LLC and its partners. No other party shall have any right to rely on this report or any service provided by CNS Environmental Corp. without prior written consent by Acadia Realty Trust LLC and CNS Environmental Corp.

The subsurface investigation was performed in accordance with professional standards applicable to the industry today. The results of this assessment and the contents of this report are subject to revision based on future events and/or investigations. CNS Environmental Corporation assumes no responsibility for the property owner's actions related to the following:

- Violation of any federal, state or local statute or ordinance relating to identification or disposal of a hazardous substance or its constituents;
- Undertaking of, or arrangement for the handling, removal, treatment, storage, transportation, or disposal of hazardous substances or constituents found or identified, and;
- Changed conditions or hazardous substances or constituents introduced at the properties by Client or third persons to this contract during or after the completion of services provided by this report.

Therefore, the findings, conclusions and recommendations presented herein are based solely on the aforementioned scope of work and information gathering. Incomplete or outstanding information identified throughout this report is considered a limitation to the assessment.

All findings, conclusions and recommendations stated in this report are based upon facts, circumstances and industry-accepted procedures for such services, as they existed at the time this report was prepared. All findings, conclusions and recommendations stated in this reports are based on the data and information provided and observations and conditions that existed on the date and timework was performed. Responses received from local, state, or federal agencies or other out-sourced or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions or circumstances to the report. A change in fact, circumstance or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions and recommendations expressed in this report and is considered a limitation.

1.0 INTRODUCTION

CNS Environmental Corp. (CNS) was retained by Acadia Realty Trust, LLC to conduct quarterly groundwater sampling for the property located at 4650 Broadway in New York, NY; referred to hereafter as the "subject site".

The subject site is improved with a two-story commercial building constructed c. 1928, located on the northeast corner of Broadway and Sherman Avenue and currently occupied by a parking garage and a U-Haul Dealer. See Figure 1. Site Location Map.

2.0 BACKGROUND

Based on the findings of a subsurface investigation, gasoline contamination was identified within the groundwater at the subject site. Based on these findings CNS compiled and executed a NYSDEC approved Remedial Action Plan dated June 12, 2009 (NYSDEC RAP Approval Email dated July 10, 2009); bound under a separate cover, which consisted of the removal of Underground Storage Tanks (UST) and associated impacted soils, the installation of monitoring wells and utilized RegenOx™ chemical oxidizer injections, to effectively remediate the groundwater. Note: prior to the RegenOx™ application, CNS collected a round of groundwater samples from each monitoring well to establish a site baseline on March 12, 2009. Upon completion of the remediation, CNS submitted a Remediation Report (Remediation Report dated October 22, 2009 bound under a separate cover) and was subsequently directed by the NYSDEC to collect quarterly groundwater samples.

The previous rounds of quarterly sampling were performed on 9/30/2009, 12/29/2009, 3/29/2010, 6/28/2010, 9/24/2010, 12/24/2010, 3/29/2011, 6/28/2011, 10/7/2011, 12/28/2011, 4/13/2012, 9/25/12, 12/31/2012 and 10/24/2014.

Sometime after the sampling event in December of 2012, site contractors destroyed the installed monitoring wells. CNS reinstalled the four (4) monitoring wells (MW1 through MW4) as well as an additional monitoring well (MW5) on September 9, 2014 in compliance with the approved June 12, 2009 RAP.

3.0 FIELD ACTIVITIES

On Thursday, January 29, 2015, CNS collected groundwater samples from the five (5) existing monitoring wells labelled MW1 through MW5 (See Figure II: Monitoring Well Locations). Prior to collecting the groundwater samples, CNS measured the depth to groundwater from the top of the well casings utilizing an electronic Keck Water Level Meter.

Prior to sampling, the wells were purged of 3 to 5 well volumes utilizing a low flow submersible pump with disposable tubing. In addition, after the final well purge within each monitoring well, measurements for temperature, conductivity, pH, dissolved oxygen and oxygen-reduction potential (ORP) were collected utilizing a YSI 556 Multi Probe System within non-chemically analyzed clean sample jars. See Table I for Groundwater Measurements.

The collected groundwater samples were collected in accordance with USEPA "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846) and analyzed for VOCs and SVOCs in accordance with NYSDEC CP-51 Protocols under EPA analytical Methods 8260 and 8270. The groundwater samples were placed in laboratory supplied glassware, packed in an ice-filled cooler accompanied by a chain-of-custody documentation and delivered to Phoenix Environmental Laboratories (NYSDEC ID#: 11301) located at 587 East Middle Turnpike. See Appendix A for Laboratory Analytical Data Sheets.

The collected groundwater samples were compared against the NYSDEC's Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Groundwater Effluent Limitations (NYSDEC Groundwater Standards). A summary of the analytical results are presented in Table II.

4.0 GROUNDWATER MEASUREMENT PARAMETERS

As indicated in Table I, temperature levels ranged between 50.58 °F through 54.60 °F with an average temperature of 52.13 °F. pH levels ranged between 7.26 through 7.65. Dissolved Oxygen levels ranged between 1.77 through 15.04 mg/l. Qualitative ORP levels ranged from -132.2 through -3.

5.0 GROUNDWATER ANALYTICAL RESULT INTERPRETATION

The subject site's baseline groundwater sampling event occurred on March 12, 2009. Current analytical results were compared to the NYSDEC TOGS 1.1.1 GA values and are summarized herein within Table II on the following page. Analytical results associated with this sampling event are as follows:

MW1: The VOC constituents 1,2,4-Trimethylbenzene (1,800 ppb), 1,3,5-Trimethylbenzene (560 ppb), Ethylbenzene (350 ppb), Isopropylbenzene (32 ppb), m,p-Xylene (2,300 ppb), n-Butylbenzene (18 ppb), n-Propylbenzene (210 ppb), o-Xylene (290 ppb), sec-Butylbenzene (14 ppb) and Toluene (36 ppb) exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. In addition, Total Xylenes was identified at 2590 ppb, Naphthalene at 170 ppb and Benzene at 53 ppb, exceeding their respective NYSDEC TOGS 1.1.1 GA value of 10 ppb and 1 ppb, respectively. The SVOC constituent Naphthalene was identified at 160 ppb, which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results, VOC and SVOC constituents have seen an overall decrease in concentrations with p-Isopropyltoluene no longer present, however, the VOC constituents Benzene, sec-Butylbenzene and Toluene were not identified in the baseline analytical results but were identified in the previous sampling event. When compared against the most recent prior sampling event, overall constituent concentrations have increased.

MW2: The VOC constituents 1,2,4-Trimethylbenzene (670 ppb), 1,3,5-Trimethylbenzene (160 ppb), Ethylbenzene (200 ppb), Isopropylbenzene (35 ppb), m,p-Xylene (1500 ppb), n-Propylbenzene (59 ppb) and o-Xylene (570 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Naphthalene was identified at 150 ppb, which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb. The SVOC constituent Naphthalene was identified at 30 ppb, which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results as well as the most recent prior sampling event, the VOC and SVOC constituents have seen an overall increase in concentrations.

MW3: The VOC constituents 1,2,4-Trimethylbenzene (500 ppb), 1,3,5-Trimethylbenzene (160 ppb), Ethylbenzene (43 ppb), Isopropylbenzene (18 ppb), m,p-Xylene (320 ppb), n-Propylbenzene (53 ppb), o-Xylene (42 ppb) and sec-Butylbenzene (6.8 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Benzene was identified at 3.1 ppb, Naphthalene was identified at 48 ppb and Total Xylenes was identified at 362 ppb, exceeding their respective NYSDEC TOGS 1.1.1 GA values of 1 ppb and 10 ppb, respectively. The SVOC constituents Benzo(a)anthracene (0.04 ppb), Benzo(b)fluoranthene (0.03) and Chrysene (0.04 ppb) exceed their NYSDEC TOGS 1.1.1 GA value of 0.002 ppb. The SVOC constituent Naphthalene was identified at 180 ppb, which exceeds its which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results as well as the most recent prior sampling event, the VOC constituents have seen an overall decrease in concentrations with the exception of p-Isopropyltoluene, which showed a slight increase. The SVOC constituent Naphthalene has increased from the baseline sampling event. Additionally, three new SVOC constituents were identified in the recent sampling event, consisting of Benzo(a)anthracene, Benzo(b)fluoranthene, and Chrysene.

MW4: The VOC constituents 1, 2, 4-Trinitrobenzene (13,000 ppb), 1, 3, 5-Trinitrobenzene (520 ppb), Isopropylbenzene (75 ppb), o-Tolylbenzene (23 ppb), n-Propylbenzene (200 ppb) and sec-Tolylbenzene (19 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA value of 5.0 ppb. The SVOC constituent Naphthalene was identified at 11 ppb, which exceeds its which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results as well as the most recent prior sampling event, VOC constituents have slightly decreased with the exception of Isopropylbenzene, n-Propylbenzene sec-Tolylbenzene, which has slightly increased. Additionally, the VOC constituents 4-Isopropyltoluene m,p-Xylene, and total Xylenes are no longer present. The SVOC constituent Naphthalene which was not identified on the baseline sampling event is identified slightly above its respective NYSDEC TOGS 1.1.1 GA value.

MW5: No VOC or SVOC constituents were identified within this sampling event.

 NYSDC Standard of Meth. Toluene and Chloroform (ppb) 10. 1.1. NYSDC Standard of Meth. Toluene & Chloroform (ppb) 10.

6.3 CONCLUSIONS

Gasoline related contamination remains present at the subject site from the past underground storage tanks as observed within the past subsurface investigation and groundwater sampling completed by CNS. VOC contamination within monitoring wells MW1, MW3 and MW4 have decreased compared to the baseline sampling event, while monitoring well MW2 has seen an increase in VOC concentrations compared to the baseline sampling event. Laboratory analytical results did not identify any VOC or SVOC constituents in monitoring well MW5.

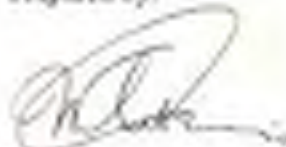

As indicated in Table 1, the groundwater measurement parameters of temperature, pH, dissolved oxygen and oxygen-reduction potential (ORP) indicate favorable ranges for active oxidation and microorganisms; however, monitoring wells MW1, MW2, MW4 and MW5 dissolved oxygen has decreased since the baseline sampling event.

Due to exceedances of the NYSDEC Groundwater Standards in monitoring wells MW1 through MW4, CNS will continue to monitor the groundwater contaminant levels at the subject site. The next groundwater sampling event is scheduled for April of 2015.

8.3 PROJECT LIMITATIONS

This report is written for the use of Acadia Realty Trust LLC and its partners. No other party shall have any right to rely on this report or any service provided by CNS Environmental Corp. without prior written consent by Acadia Realty Trust LLC and CNS Environmental Corp.

The subsurface investigation was performed in accordance with professional standards applicable to the industry today. The results of this assessment and the contents of this report are subject to revision based on future events and/or investigations. CNS Environmental Corporation assumes no responsibility for the property owner's actions related to the following:

- Violation of any federal, state or local statute or ordinance relating to identification or disposal of a hazardous substance or its constituents;
- Undertaking of, or arrangement for the handling, removal, treatment, storage, transportation, or disposal of hazardous substances or constituents found or identified, and;
- Changed conditions or hazardous substances or constituents introduced at the properties by Client or third persons to this contract during or after the completion of services provided by this report.

Therefore, the findings, conclusions and recommendations presented herein are based solely on the aforementioned scope of work and information gathering. Incomplete or outstanding information identified throughout this report is considered a limitation to the assessment.

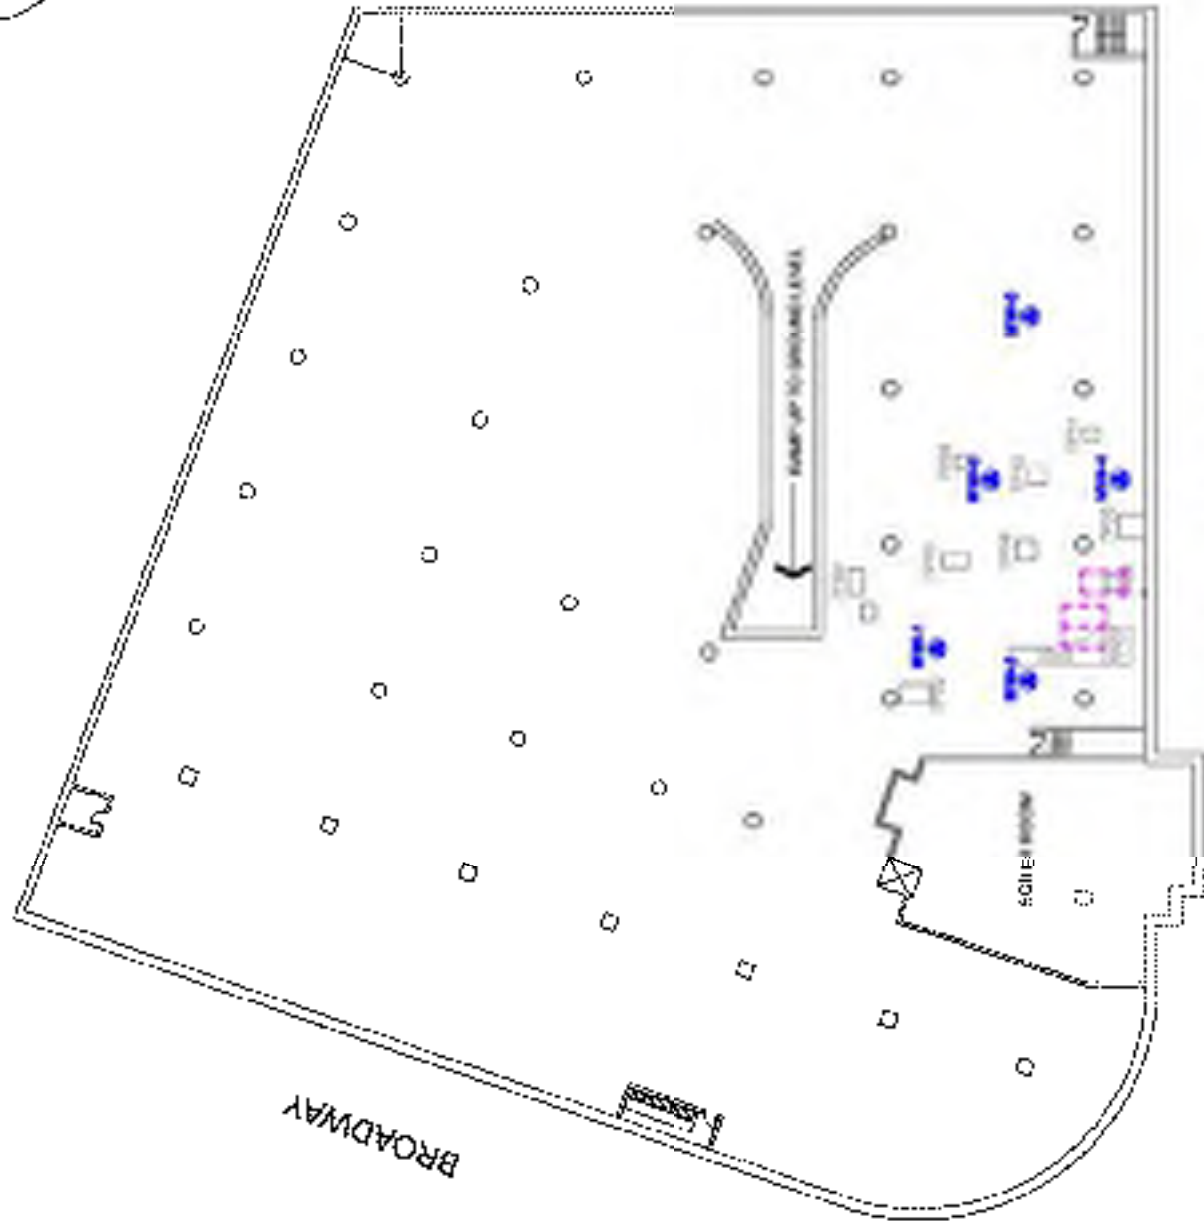

All findings, conclusions and recommendations stated in this report are based upon facts, circumstances and industry-accepted procedures for such services, as they existed at the time this report was prepared. All findings, conclusions and recommendations stated in this reports are based on the data and information provided and observations and conditions that existed on the date and timework was performed. Responses received from local, state, or federal agencies or other out-sourced or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions or circumstances to the report. A change in fact, circumstance or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions and recommendations expressed in this report and is considered a limitation.

Plainville, NY 11803-4307

Project ID: ACADIA
Sample IDs: BH66272 - BH66276

This laboratory is in compliance with the NELAP requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Comments:

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semi-volatile analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
 This report must not be reproduced except in full as defined by the attached chain of custody.

RL, PQL=Reporting/Practical Quantitation Level (Equivalent to NELAP LOQ, Limit of Quantitation) ND=Not Detected
 BPL=Below Reporting Level

Comments:

Volatile Comment:

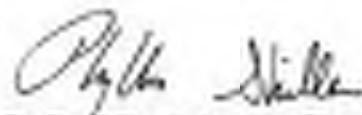

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1.0 INTRODUCTION

CNS Environmental Corp. (CNS) was retained by Acadia Realty Trust, LLC to conduct quarterly groundwater sampling for the property located at 4650 Broadway in New York, NY; referred to hereafter as the "subject site".

The subject site is improved with a two-story commercial building constructed c. 1928, located on the northeast corner of Broadway and Sherman Avenue and currently occupied by a parking garage and a U-Haul Dealer. See Figure 1. Site Location Map.

2.0 BACKGROUND

Based on the findings of a subsurface investigation, gasoline contamination was identified within the groundwater at the subject site. Based on these findings CNS compiled and executed a NYSDEC approved Remedial Action Plan dated June 12, 2009 (NYSDEC RAP Approval Email dated July 10, 2009); bound under a separate cover, which consisted of the removal of Underground Storage Tanks (UST) and associated impacted soils, the installation of monitoring wells and unlined RegenOx™ chemical oxidizer injections, to effectively remediate the groundwater. Note: prior to the RegenOx™ application, CNS collected a round of groundwater samples from each monitoring well to establish a site baseline on March 12, 2009. Upon completion of the remediation, CNS submitted a Remediation Report (Remediation Report dated October 22, 2009 bound under a separate cover) and was subsequently directed by the NYSDEC to collect quarterly groundwater samples.

Sometime after the sampling event in December of 2012, site contractors destroyed the installed monitoring wells. CNS reinstalled the four (4) monitoring wells (MW1 through MW4) as well as an additional monitoring well (MW5) on September 9, 2014 in compliance with the approved June 12, 2009 RAP.

The previous rounds of quarterly sampling were performed on 9/20/2009, 12/29/2009, 3/29/2010, 6/28/2010, 9/26/2010, 12/26/2010, 3/29/2011, 6/21/2011, 10/7/2011, 12/28/2011, 4/13/2012, 9/25/12, 12/31/2012, 10/24/2013, and 1/29/2015.

3.0 FIELD ACTIVITIES

On Wednesday, April 8, 2015, CNS collected groundwater samples from the five (5) existing monitoring wells labelled MW1 through MW5 (See Figure II: Monitoring Well Locations). Prior to collecting the groundwater samples, CNS measured the depth to groundwater from the top of the well casings utilizing an electronic Keck Water Level Meter.

Prior to sampling, the wells were purged of 3 to 5 well volumes utilizing a low flow submersible pump with disposable tubing. In addition, after the final well purge within each monitoring well, measurements for temperature, conductivity, pH, dissolved oxygen and oxygen-reduction potential (ORP) were collected utilizing a YSI 556 Multi Probe System within non-chemically analyzed clean sample jars. See Table I for Groundwater Measurements.

The collected groundwater samples were collected in accordance with USEPA "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846) and analyzed for VOCs and SVOCs in accordance with NYSDEC CP-51 Protocols under EPA analytical Methods 8260 and 8270.

The groundwater samples were placed in laboratory supplied glassware, packed in an ice-filled cooler accompanied by a chain-of-custody documentation and delivered to Phoenix Environmental Laboratories, Inc. (NYSDEC ID#: 11501) located at 587 East Middle Turnpike, Manchester, CT 06040. See Appendix A for Laboratory Analytical Data Sheets.

The collected groundwater samples were compared against the NYSDEC's Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Groundwater Effluent Limitations (NYSDEC Groundwater Standards). A summary of the analytical results are presented in Table II.

4.0 GROUNDWATER MEASUREMENT PARAMETERS

As indicated in Table I, temperature levels ranged between 53.29°F through 54.54°F with an average temperature of 54°F. pH levels ranged between 7.45 through 7.59. Dissolved Oxygen levels ranged between 4.19 through 11.2 mg/l. Qualitative ORP levels ranged from -360 through 11.5.

Measuring MW was conducted on 4/18/13

5.0 GROUNDWATER ANALYTICAL RESULT INTERPRETATION

The subject site's baseline groundwater sampling event occurred on March 12, 2009. Current analytical results were compared to the NYSDEC TOGS 1.1.1 GA values and are summarized herein within Table II on the following page. Analytical results associated with this sampling event are as follows:

M01: The VOC constituents 1,2,4-Trimethylbenzene (1,900 ppb), 1,3,5-Trimethylbenzene (640 ppb), Ethylbenzene (320 ppb), Isopropylbenzene (90 ppb), m,p-Xylene (2,200 ppb), n-Butylbenzene (26 ppb), n-Propylbenzene (230 ppb), o-Xylene (270 ppb), p-Isopropyltoluene (11 ppb), sec-Butylbenzene (18 ppb), Toluene (45 ppb) exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. In addition, Total Xylenes was identified at 2470 ppb, Naphthalene at 180 ppb and Benzene at 39 ppb, exceeding their respective NYSDEC TOGS 1.1.1 GA value of 30 ppb and 1 ppb, respectively. The SVOC constituent Naphthalene was identified at 130 ppb, which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results, VOC and SVOC constituents have seen an overall decrease in concentrations with p-Isopropyltoluene being identified exceeding its respective NYSDEC TOGS 1.1.1 GA value, after six quarters without detection; additionally, the VOC constituents Benzene, sec-Butylbenzene, and Toluene were not identified in the baseline analytical results but were identified during the current quarter sampling event. When compared to previous quarter sampling event sec-Butylbenzene and Toluene have slightly increase in concentration while Benzene has slightly decrease in concentration.

M02: The VOC constituents 1,2,4 -Trimethylbenzene (610 ppb), 1,3,5 -Trimethylbenzene (180 ppb), Ethylbenzene (260 ppb), Isopropylbenzene (33 ppb), m,p-Xylene (1400 ppb), n-Propylbenzene (52 ppb) and o-Xylene (1800 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Naphthalene was identified at 28 ppb, which exceeded its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical all the VOC constituents have seen an overall increase in concentration; however, when compared to the previous quarter, the VOC constituents have seen an overall decrease in concentrations with the exception of 1,3,5 -Trimethylbenzene and o-Xylene which slightly increased from the previous quarter. The SVOC constituent Naphthalene has decreased in concentration since the previous quarter; however, has still increased since the baseline analytical.

M03: The VOC constituents 1,2,4 -Trimethylbenzene (38 ppb), 1,3,5 -Trimethylbenzene (11 ppb), Ethylbenzene (18 ppb), m,p-Xylene (110 ppb), and o-Xylene (47 ppb) exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Total Xylenes was identified at 157 ppb, exceeding its respective NYSDEC TOGS 1.1.1 GA value 10 ppb. The SVOC constituents Benzo(a)anthracene (0.04 ppb), Benzo(b)fluoranthene (0.03) and Chrysene (0.02 ppb) exceed their NYSDEC TOGS 1.1.1 GA value of 0.002 ppb.

Compared to the baseline analytical results, the VOC constituents have seen an overall decrease in concentrations. The SVOC constituent Naphthalene is no longer exceeding its respective TOGS 1.1.1 GA value of 10 ppb, and the SVOC constituents Benzo(a)anthracene and Benzo(b)fluoranthene, have remained the same concentration as last quarter with Chrysene slightly decreasing in concentration from the previous quarter.

MHC: The VOC constituents 1, 2, 4 -Trimethylbenzene (12,000 ppb), 1, 3, 5 -Trimethylbenzene (490 ppb), Ethylbenzene (6.3 ppb), Isopropylbenzene (66 ppb), m,p-Xylene (43 ppb), o-Butylbenzene (23 ppb), n-Propylbenzene (170 ppb), p-Isopropyltoluene (15 ppb) and sec-Butylbenzene (17 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA value of 5.0 ppb. The SVOC constituent Benzo(b)fluoranthene (0.04 ppb) and Chrysene (0.10 ppb), were identified exceeding their respective NYSDEC TOGS 1.1.1 GA value of 0.002 ppb.

Compared to the baseline analytical results, the VOC constituents have slightly decreased with the exception to the constituents Isopropylbenzene, o-Butylbenzene, n-Propylbenzene, p-Isopropyltoluene, sec-Butylbenzene and Ethylbenzene which has slightly increased. Additionally, the VOC constituents m,p-Xylene, and total Xylenes have reappeared exceeding their respective value after being not detected in the previous quarters analytical. The SVOC constituent Naphthalene has decreased in concentration to below its respective TOGS value, and the SVOC constituents Benzo(b)fluoranthene and Chrysene were not detected on the baseline analytical, however were detected in the current quarters sample.

MHC: The VOC constituent 1,2,4-Trimethylbenzene (130 ppb), 1,3,5-Trimethylbenzene (51 ppb), Ethylbenzene (7.7 ppb), Isopropylbenzene (8 ppb), (16 ppb), n-Propylbenzene (18 ppb), and o-Xylene (8.6 ppb), exceeded their respective m,p-Xylene NYSDEC TOGS 1.1.1 GA value of 5.0 ppb. Additionally, the Total Xylenes was detected at 64.6 ppb exceeded its respective NYSDEC TOGS 1.1.1 GA value of 33.0 ppb. The SVOCs Benzo(a)anthracene (0.4 ppb), Benzo(b)fluoranthene (0.03 ppb), and Chrysene (0.04 ppb) were identified exceeding their respective NYSDEC TOGS 1.1.1 GA value of 0.002 ppb.

Compared to the baseline analytical results, 1,2,4 -Trimethylbenzene has increased in concentration and VOC constituents 1,3,5-Trimethylbenzene, Ethylbenzene, Isopropylbenzene, n-Propylbenzene, o-Xylene and the SVOC constituents Benzo(a)anthracene, Benzo(b)fluoranthene, and Chrysene were not detected on the baseline analytical, however were detected in this sampling event.

Notes:

All results are in units unless otherwise specified (i.e. parts per billion (ppb))
 ND = Not Detected based on analytical detection limits. Detection limits are listed in the table.
 NYSDC Spill # 09-02248 - MW-5 Station # MW-5 located at 6650 Broadway, Station # 11. Station Water Quality Standard is Subject to the
 Groundwater Monitoring Program for the Spill at this site.

6.3 CONCLUSIONS

Gasoline related contamination remains present at the subject site from the past underground storage tanks as observed within the past subsurface investigation and groundwater sampling completed by CNS. VOC contamination within monitoring wells MW1, MW3 and MW4 have decreased compared to the baseline sampling event, while monitoring well MW2 and MW5 has seen an increase in VOC and SVOC concentrations compared to their baseline sampling events.

As indicated in Table 1, the groundwater measurement parameters of temperature, pH, dissolved oxygen and oxygen-reduction potential (ORP) indicate favorable ranges for active oxidation and microorganisms; however, monitoring wells MW1, MW2, MW4 and MW5 dissolved oxygen has decreased since the baseline sampling event.

Due to exceedances of the NYSDEC Groundwater Standards in monitoring wells MW1 through MW5, CNS will continue to monitor the groundwater contaminant levels at the subject site. The next groundwater sampling event is scheduled for July, 2015.

8.9 PROJECT LIMITATIONS

This report is written for the use of Acadia Realty Trust LLC and its partners. No other party shall have any right to rely on this report or any service provided by CNS Environmental Corp. without prior written consent by Acadia Realty Trust LLC and CNS Environmental Corp.

The subsurface investigation was performed in accordance with professional standards applicable to the industry today. The results of this assessment and the contents of this report are subject to revision based on future events and/or investigations. CNS Environmental Corporation assumes no responsibility for the property owner's actions related to the following:

- Violation of any federal, state or local statute or ordinance relating to identification or disposal of a hazardous substance or its constituents;
- Undertaking of, or arrangement for the handling, removal, treatment, storage, transportation, or disposal of hazardous substances or constituents found or identified, and;
- Changed conditions or hazardous substances or constituents introduced at the properties by Client or third persons to this contract during or after the completion of services provided by this report.

Therefore, the findings, conclusions and recommendations presented herein are based solely on the aforementioned scope of work and information gathering. Incomplete or outstanding information identified throughout this report is considered a limitation to the assessment.

All findings, conclusions and recommendations stated in this report are based upon facts, circumstances and industry-accepted procedures for such services, as they existed at the time this report was prepared. All findings, conclusions and recommendations stated in this reports are based on the data and information provided and observations and conditions that existed on the date and timework was performed. Responses received from local, state, or federal agencies or other out-sourced or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions or circumstances to the report. A change in fact, circumstance or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions and recommendations expressed in this report and is considered a limitation.

Laboratory Analytical Report w/ Chain of Custody

Wednesday, April 15, 2015

Attn: Mr. Charles Powers
CNS Management Corp
208 Newtown Road
Plainville, NY 11803-4307

Project ID: E214-893
Sample IDs: BJ00622 - BJ00628

This laboratory is in compliance with the NELAP requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller".

RL, PQL=Reporting/Practical Quantitation Level (Equivalent to NELAP LOQ, Limit of Quantitation) ND=Not Detected
 BSL=Below Reporting Level

Comments:**Volatile Comment:**

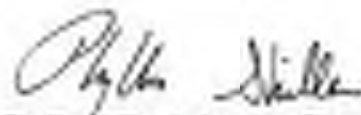

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1.0 INTRODUCTION

CNS Environmental Corp. (CNS) was retained by Acadia Realty Trust, LLC to conduct quarterly groundwater sampling for the property located at 4650 Broadway in New York, NY; referred to hereafter as the "subject site".

The subject site is improved with a two-story commercial building constructed c. 1928, located on the northeast corner of Broadway and Sherman Avenue and currently occupied by a parking garage and a U-Haul Dealer. See Figure 1. Site Location Map.

2.0 BACKGROUND

Based on the findings of a subsurface investigation, gasoline contamination was identified within the groundwater at the subject site. Based on these findings CNS compiled and executed a NYSDEC approved Remedial Action Plan dated June 12, 2009 (NYSDEC RAP Approval Email dated July 10, 2009); bound under a separate cover, which consisted of the removal of Underground Storage Tanks (UST) and associated impacted soils, the installation of monitoring wells and unlined RegenOx™ chemical oxidizer injections, to effectively remediate the groundwater. Note: prior to the RegenOx™ application, CNS collected a round of groundwater samples from each monitoring well to establish a site baseline on March 12, 2009. Upon completion of the remediation, CNS submitted a Remediation Report (Remediation Report dated October 22, 2009 bound under a separate cover) and was subsequently directed by the NYSDEC to collect quarterly groundwater samples.

Sometime after the quarterly sampling event in December 2012, site contractors destroyed the installed monitoring wells on the subject site. CNS reinstalled the four (4) monitoring wells (MW1 through MW4) as well as an additional monitoring well (MW5) on September 9, 2014 in compliance with the approved June 12, 2009 RAP.

The previous rounds of quarterly sampling were performed on 9/30/2009, 12/29/2009, 3/29/2010, 6/24/2010, 9/16/2010, 12/16/2010, 3/29/2011, 6/24/2011, 10/7/2011, 12/28/2011, 4/13/2012, 9/25/12, 12/31/2012, 10/24/2014, 1/29/2015, and 4/8/2015.

3.0 FIELD ACTIVITIES

On Friday, July 31, 2015, CNS collected groundwater samples from the five (5) existing monitoring wells MW1 through MW5 (See Figure II: Monitoring Well Locations). Prior to collecting the groundwater samples, CNS measured the depth to groundwater from the top of the well casings utilizing an electronic Keck Water Level Meter.

Prior to sampling, the wells were purged of 3 to 5 well volumes utilizing a low flow submersible pump with disposable tubing. In addition, after the final well purge within each monitoring well, measurements for temperature, conductivity, pH, dissolved oxygen and oxygen-reduction potential (ORP) were collected utilizing a YSI 556 Multi Probe System within non-chemically analyzed clean sample jars. See Table I for Groundwater Measurements.

The collected groundwater samples were collected in accordance with USEPA "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846) and analyzed for VOCs and SVOCs in accordance with NYSDEC CP-51 Protocols under EPA analytical Methods 8260 and 8270. The groundwater samples were placed in laboratory supplied glassware, packed in an ice-filled cooler accompanied by a chain-of-custody documentation and delivered to Phoenix Environmental Laboratories, Inc. (NYSDEC ID#: 11501) located at 587 East Middle Turnpike, Manchester, CT 06040. See Appendix A for Laboratory Analytical Data Sheets.

The collected groundwater samples were compared against the NYSDEC's Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Groundwater Effluent Limitations (NYSDEC Groundwater Standards). A summary of the analytical results are presented in Table II.

4.0 GROUNDWATER MEASUREMENT PARAMETERS

As indicated in Table I, temperature levels ranged between 53.09 °F through 54.51 °F with an average temperature of 53.79 °F. pH levels ranged between 8.11 through 8.15. Dissolved Oxygen levels ranged between 1.31 through 9.27 mg/L. Qualitative ORP levels ranged from -136 through -37.9.

5.0 GROUNDWATER ANALYTICAL RESULT INTERPRETATION

The subject site's baseline groundwater sampling event occurred on March 12, 2009. Current analytical results were compared to the NYSDEC TOGS 1.1.1 GA values and are summarized herein within Table II on the following page. Analytical results associated with this sampling event are as follows:

MW1: The VOC constituents 1,2,4-Trimethylbenzene (1,100 ppb), 1,3,5-Trimethylbenzene (440 ppb), Ethylbenzene (190 ppb), Isopropylbenzene (57 ppb), m&p-Xylene (1,100 ppb), n-Butylbenzene (29 ppb), n-Propylbenzene (150 ppb), o-Xylene (160 ppb), Toluene (22 ppb) exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. In addition, Total Xylenes was identified at 1260 ppb, Naphthalene at 92 ppb and Benzene at 29 ppb, exceeding their respective NYSDEC TOGS 1.1.1 GA value of 10 ppb and 1 ppb, respectively. The SVOC constituent Naphthalene was identified at 82 ppb, which exceeds its respective NYSDEC TOGS 1.1.1 GA value of 10 ppb.

Compared to the baseline analytical results, VOC and SVOC constituents have seen an overall decrease in concentrations with p-Isopropyltoluene and sec-Butylbenzene no longer being detected. When compared to previous quarter sampling event n-Butylbenzene has slightly increase in concentration.

MW2: The VOC constituents 1,2,4-Trimethylbenzene (390 ppb), 1,3,5-Trimethylbenzene (98 ppb), Ethylbenzene (119 ppb), Isopropylbenzene (17 ppb), m&p-Xylene (339 ppb), n-Propylbenzene (30 ppb) and o-Xylene (160 ppb), exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Naphthalene was identified at 38 ppb and Total Xylenes was identified at 690, which exceeded their respective NYSDEC TOGS 1.1.1 GA values of 10 ppb.

Compared to the baseline analytical all the VOC constituents have seen an overall increase in concentration; however, when compared to the previous quarter, the VOC constituents have seen an overall decrease in concentrations. The SVOC constituent Naphthalene is no longer identified exceeding its respective NYSDEC TOG 1.1.1 GA value.

MW3: The VOC constituents 1,2,4-Trimethylbenzene (720 ppb), 1,3,5-Trimethylbenzene (320 ppb), Ethylbenzene (110 ppb), Isopropylbenzene (36 ppb), m&p-Xylene (540 ppb), n-Butylbenzene (21), n-Propylbenzene (85 ppb), Toluene (9.9 ppb), o-Xylene (51 ppb), sec-Butylbenzene (13 ppb) and p-Isopropyltoluene (6.7 ppb) exceeded their respective NYSDEC TOGS 1.1.1 GA values of 5.0 ppb. Additionally, Total Xylenes (851 ppb) and Naphthalene (61 ppb) were identified exceeding their respective NYSDEC TOGS 1.1.1 GA value 10 ppb with the VOC constituent Benzene (18 ppb) exceeding its respective NYSDEC TOGS 1.1.1 GA value 1 ppb. The SVOC constituents Benz(a)anthracene (9.64 ppb) and Naphthalene (23 ppb) were identified exceeding their NYSDEC TOGS 1.1.1 GA values of 0.002 ppb and 10 ppb, respectively.

Compared to the baseline analytical results, the VOC constituents have seen an overall decrease in concentrations with the Toluene being identified during the recent quarter and not during the baseline sampling event. The SVOC constituent Naphthalene has been reidentified exceeding its respective TOGS 1.1.1 GA value of 10 ppb, and the SVOC constituent Benz(a)anthracene remains at the same concentration as the previous quarter.

MW4: The VOC constituents 1, 2, 4-Trimethylbenzene (580 ppb), 1, 3, 5-Trimethylbenzene (370 ppb), Isopropylbenzene (62 ppb), m&p-Xylene (7.5 ppb), o-Diethylbenzene (18 ppb), n-Propylbenzene (140 ppb), p-Isopropyltoluene (11 ppb) and sec-Butylbenzene (36 ppb), were identified exceeding their respective NYSDEC TOGS 1.1.1 GA value of 5.0 ppb.

Compared to the baseline analytical results, the identified VOC constituents have increased in concentration with the exception to the constituents Ethylbenzene and Total Xylenes which are no longer present. Additionally, the SVOC constituents Benz(a)fluoranthene and Chrysene are no longer detected in the recent quarter.

MW5: The SVOC Benz(a)anthracene was identified at 0.03 ppb exceeding its respective NYSDEC TOGS 1.1.1 GA value of 0.002 ppb .

When compared to the baseline analytical results, the VOC constituent 1,2,4-Trimethylbenzene is no longer detected. The VOC constituents 1,3,5-Trimethylbenzene, Ethylbenzene, Isopropylbenzene, m&p-Xylene, n-Propylbenzene, o-Xylene and Total Xylenes identified in the previous quarter are no longer detected. The SVOC constituent Benz(a)anthracene remains exceeding its respective NYSDEC TOGS 1.1.1 GA value.

 Concentrations exceeding the NYSDOC GW Maximum are highlighted in red.

6.3 CONCLUSIONS

Gasoline related contamination remains present at the subject site from the past underground storage tanks as observed within the past subsurface investigation and groundwater sampling completed by CNS. VOC contamination within monitoring wells MW1, MW3 and MW5 have decreased compared to the baseline sampling event, while monitoring well MW2 and MW4 has seen an increase in VOC and SVOC concentrations compared to the baseline sampling event.

As indicated in Table 1, the groundwater measurement parameters of temperature, pH, dissolved oxygen and oxygen-reduction potential (ORP) indicate favorable ranges for active oxidation and microorganisms; however, monitoring wells MW1, MW2, MW4 and MW5 dissolved oxygen has decreased since the baseline sampling event.

Due to exceedances of the NYSDEC Groundwater Standards in monitoring wells MW1 through MW5, CNS will continue to monitor the groundwater contaminant levels at the subject site. The next groundwater sampling event is scheduled for October, 2015.

8.3 PROJECT LIMITATIONS

This report is written for the use of Acadia Realty Trust LLC and its partners. No other party shall have any right to rely on this report or any service provided by CNS Environmental Corp. without prior written consent by Acadia Realty Trust LLC and CNS Environmental Corp.

The subsurface investigation was performed in accordance with professional standards applicable to the industry today. The results of this assessment and the contents of this report are subject to revision based on future events and/or investigations. CNS Environmental Corporation assumes no responsibility for the property owner's actions related to the following:

- Violation of any federal, state or local statute or ordinance relating to identification or disposal of a hazardous substance or its constituents;
- Undertaking of, or arrangement for the handling, removal, treatment, storage, transportation, or disposal of hazardous substances or constituents found or identified, and;
- Changed conditions or hazardous substances or constituents introduced at the properties by Client or third persons to this contract during or after the completion of services provided by this report.

Therefore, the findings, conclusions and recommendations presented herein are based solely on the aforementioned scope of work and information gathering. Incomplete or outstanding information identified throughout this report is considered a limitation to the assessment.

All findings, conclusions and recommendations stated in this report are based upon facts, circumstances and industry-accepted procedures for such services, as they existed at the time this report was prepared. All findings, conclusions and recommendations stated in this reports are based on the data and information provided and observations and conditions that existed on the date and timework was performed. Responses received from local, state, or federal agencies or other out-sourced or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions or circumstances to the report. A change in fact, circumstance or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions and recommendations expressed in this report and is considered a limitation.

Laboratory Analytical Report w/ Chain of Custody

Tuesday, September 08, 2015

Attn: Mr. Charles Powers
CNS Management Corp
208 Newtown Road
Plainville, NY 11803-4307

Project ID: SHERMAN AVE
Sample IDs: BJ67242 - BJ67246

This laboratory is in compliance with the NELAP requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

EL = Present in Blank, no/low suspected

RL, PQL = Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 EPL=Below Reporting Level

Comments:

Per 1.4.8 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

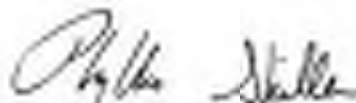

Volatile Comment:

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semi-volatile analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
 This report must not be reproduced except in full as defined by the attached chain-of-custody.

E = Present in Blank, no leak suspected

RL, PQL = Reporting/Practical Quantitation Level (Equivalent to NELAP LOQ, Limit of Quantitation) ND=Not Detected
 EPL=Below Reporting Level

Comments:

Per 1.4.8 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

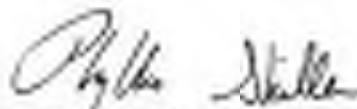

Volatile Comment:

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semi-volatile analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Linda,
in sample ID's BJ67342 - BJ67346 we ran EPA 8260 and EPA8270, can we actually have it for CP-51 VOC and CP-51 SVOC.

Please let me know if it is possible.

Thank you,

1.0 INTRODUCTION

CNS Environmental Corp. (CNS) was retained by Acadia Realty Trust, LLC to conduct quarterly groundwater sampling for the property located at 4650 Broadway in New York, NY; referred to hereafter as the "subject site".

The subject site is improved with a two-story commercial building with a basement constructed c. 1928, located on the northeast corner of Broadway and Sherman Avenue and currently occupied by a parking garage and a U-Haul Dealer. See Figure 1: Site Location Map.

2.0 BACKGROUND

Based on the findings of a subsurface investigation, gasoline contamination was identified within the groundwater at the subject site. Based on these findings CNS compiled and executed a NYSDEC approved Remedial Action Plan dated June 12, 2009 (NYSDEC RAP Approval Email dated July 10, 2009); bound under a separate cover, which consisted of the removal of Underground Storage Tanks (UST) and associated impacted soils, the installation of monitoring wells and utilized RegenOx™ chemical oxidizer injections, to effectively remediate the groundwater. Note: prior to the RegenOx™ application, CNS collected a round of groundwater samples from each monitoring well to establish a site baseline on March 12, 2009. Upon completion of the remediation, CNS submitted a Remediation Report (Remediation Report dated October 22, 2009 bound under a separate cover) and was subsequently directed by the NYSDEC to collect quarterly groundwater samples.

Sometime after the quarterly sampling event in December of 2012, site contractors destroyed all the on-site monitoring wells. CNS reinstalled the four (4) monitoring wells (MW1 through MW4) as well as an additional monitoring well (MW5) on September 9, 2014 in compliance with the approved June 12, 2009 RAP.

The previous rounds of quarterly sampling were performed on 9/30/2009, 12/29/2009, 3/29/2010, 6/24/2010, 9/30/2010, 12/30/2010, 3/29/2011, 6/24/2011, 10/7/2011, 12/28/2011, 4/13/2012, 9/25/12, 12/31/2012, 10/24/2013, 1/29/2015, 4/8/2015, and 7/31/2015.

3.0 FIELD ACTIVITIES

On Tuesday, October 20, 2015, CNS collected groundwater samples from the five (5) existing monitoring wells MW1 through MW5 (See Figure II: Monitoring Well Locations). Prior to collecting the groundwater samples, CNS measured the depth to groundwater from the top of the well casings utilizing an electronic K&K Water Level Meter.

Prior to sampling, the wells were purged of 3 to 5 well volumes utilizing a low flow submersible pump with disposable tubing. In addition, after the final well purge within each monitoring well, measurements for temperature, conductivity, pH, dissolved oxygen and oxygen-reduction potential (ORP) were collected utilizing a YSI 556 Multi Probe System within non-chemically analyzed clean sample jars. See Table I for Groundwater Measurements.

The collected groundwater samples were collected in accordance with USEPA "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846) and analyzed for VOCs and SVOCs in accordance with NYSDEC CP-51 Protocols under EPA analytical Methods 8260 and 8270. The groundwater samples were placed in laboratory supplied glassware, packed in an ice-filled cooler accompanied by a chain-of-custody documentation and delivered to Phoenix Environmental Laboratories, Inc. (NYSDEC ID#: 11301) located at 587 East Middle Turnpike, Manchester, CT 06040. See Appendix A for Laboratory Analytical Data Sheets.

The collected groundwater samples were compared against the NYSDEC's Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Groundwater Effluent Limitations (NYSDEC Groundwater Standards). A summary of the analytical results are presented in Table II.

4.0 GROUNDWATER MEASUREMENT PARAMETERS

As indicated in Table I on the following page, temperature levels ranged between 69.17 °F through 70.73 °F with an average temperature of 69.8 °F. pH levels ranged between 7.38 through 7.85. Dissolved Oxygen levels ranged between 1.51 through 4.21 mg/l. Qualitative ORP levels ranged from -119.7 through -52.96.

Table 1. Groundwater Measurements

Monitoring Well ID	Parameter			Sampling Date				Remarks
	Parameter	Unit	Value	10/1	10/2	10/3	10/4

5.0 GROUNDWATER ANALYTICAL RESULT INTERPRETATION

The subject site's baseline groundwater sampling event occurred on March 12, 2009. Current analytical results were compared to the NYSDEC Groundwater Standard values and are summarized herein within Table II on the following page. Analytical results associated with this sampling event are as follows:

M/W1: The VOC constituents 1,2,4-Trimethylbenzene (810 ppb), 1,3,5-Trimethylbenzene (220 ppb), Ethylbenzene (140 ppb), Isopropylbenzene (42 ppb), m,p-Xylene (860 ppb), n-Butylbenzene (12 ppb), n-Propylbenzene (87 ppb), o-Xylene (130 ppb), Toluene (23 ppb), sec-Butylbenzene (3.5 ppb) exceeded their respective NYSDEC Groundwater Standard values of 5.0 ppb. Additionally, Total Xylenes (990 ppb) and Naphthalene (94 ppb) were identified exceeding their respective NYSDEC Groundwater Standard value of 10 ppb, with Benzene (21 ppb) being identified exceeding its respective NYSDEC Groundwater Standard value of 1 ppb. The SVOC constituent Naphthalene was identified at 82 ppb, which exceeds its respective NYSDEC Groundwater Standard value of 10 ppb.

Compared to the baseline analytical results, VOC and SVOC constituents have seen an overall decrease in concentrations with sec-Butylbenzene being detected above its respective NYSDEC Groundwater Standard value. When compared to previous quarter sampling events, the concentration of constituents have overall decreased with the exception of n-Butylbenzene which has slightly increase in concentration.

M/W2: The VOC constituents 1, 2, 4-Trimethylbenzene (10 ppb), m,p-Xylene (15 ppb), and o-Xylene (5.5 ppb), exceeded their respective NYSDEC Groundwater Standard values of 5.0 ppb. Additionally, Total Xylenes was identified at 20.9 ppb, which exceeds its respective NYSDEC Groundwater Standard value of 10 ppb.

Compared to the baseline analytical all the VOC constituents have seen an overall decrease in concentration with 1, 3, 5-Trimethylbenzene, Ethylbenzene, Naphthalene, and n-Propylbenzene no longer being detected above their respective NYSDEC Groundwater Standard values. The SVOC constituent Naphthalene was identified above the laboratory minimum detection limit, however, below its respective NYSDEC Groundwater Standard value.

M/W3: The VOC constituents 1,2,4-Trimethylbenzene (7.6 ppb), exceeded it's respective NYSDEC Groundwater Standard value of 5.0 ppb. Additionally, The SVOC constituents Benz(a)anthracene (0.05 ppb), Benz(b)fluoranthene (0.05 ppb), Benz(k)fluoranthene (0.05 ppb), Chrysene (0.06 ppb), and Indeno(1,2,3-cd)pyrene (0.03 ppb) were identified exceeding their respective NYSDEC Groundwater Standard values of 0.002 ppb.

Compared to the baseline analytical results, the VOC constituents have seen an overall decrease in concentrations with 1, 3, 5-Trimethylbenzene, Isopropylbenzene and Total Xylenes no longer exceeding their respective NYSDEC Groundwater Standard values, and Benzene, Ethylbenzene, m,p-Xylene, Naphthalene, n-Butylbenzene, n-Propylbenzene, o-Xylene, p-Isopropyltoluene, sec-Butylbenzene and Toluene are no longer detected in the current quarter. The SVOC constituents Benz(a)anthracene, Benz(b)fluoranthene, Benz(k)fluoranthene, Chrysene, and Indeno(1,2,3-cd)pyrene were not identified in the baseline sampling event, however, were detected exceeding their respective NYSDEC Groundwater Standard values in the current quarter. Additionally the SVOC constituent Naphthalene is no longer

identified in the current quarter, and Pyrene and Benzo (a) pyrene has been detected above the laboratories minimum detection limit, however were below their respective NYSDDEC Groundwater Standard values.

MW2: The VOC constituents 1, 2, 4-Trimethylbenzene (640 ppb), 1, 3, 5-Trimethylbenzene (320 ppb), Isopropylbenzene (54 ppb), m&p-Xylene (6.5 ppb), n-Butylbenzene (8.2 ppb), n-Propylbenzene (120 ppb), p-Isopropyltoluene (6.2 ppb) and sec-Butylbenzene (7.2 ppb), were identified exceeding their respective NYSDDEC Groundwater Standard 1.1.1 GA value of 5.0 ppb. Additionally the SVOC constituent Chrysene (0.02 ppb) exceeded its respective NYSDDEC Groundwater Standard value of 0.002 ppb.

Compared to the baseline analytical results, the identified VOC constituents have decreased in concentration with Naphthalene and total Xylenes detected above the laboratories minimum detection limit, but remain below their respective NYSDDEC Groundwater Standard values. Chrysene is now identified in the recent quarter after not being detected in the previous quarter. Additionally, the SVOC constituent chrysene was not identified during the baseline sampling event; however, is identified exceeding its respective NYSDDEC Groundwater Standard value in the current quarter.

MW3: The SVOC constituents Benzo(b)fluoranthene was identified at 0.02 ppb and Chrysene was identified at 0.03 ppb exceeding their respective NYSDDEC Groundwater Standard value of 0.002 ppb.

When compared to the baseline analytical results, the VOC constituents are longer detected and when compared the previous quarter Benzo(a)anthracene is no longer detected, while Benzo(b)fluoranthene and Chrysene are now detected above their respective NYSDDEC Groundwater Standard values.

 NYSDC GW Standards = NYSDC Division of Water Pollution and Operational Standards (DWS) 2-115. Analyte listed below. Standards & Reference Values.
 Concentrations exceeding the NYSDC GW Standards are highlighted in red.

6.3 CONCLUSIONS

Gasoline related contamination remains present at the subject site from the past underground storage tanks as observed within the past subsurface investigation and groundwater sampling completed by CNS. VOC contamination within all the monitoring wells have an overall decrease in concentration when compared to the baseline sampling event, with the exception to MW1 which has seen an increase in concentration. Additionally, SVOC concentrations have increased in monitoring wells MW1, MW3, MW4, and MW5, when compared to the baseline sampling.

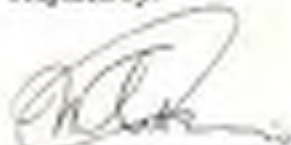

As indicated in Table 1, the groundwater measurement parameters of temperature, pH, dissolved oxygen and oxygen-reduction potential (ORP) indicate favorable ranges for active oxidation and microorganisms; however, monitoring wells MW1, MW3, MW4, and MW5 dissolved oxygen has decreased since the baseline sampling event.

Due to exceedances of the NYSDEC Groundwater Standards in monitoring wells MW1 through MW5, CNS will continue to monitor the groundwater contaminant levels at the subject site and is requesting to inject RegenOx™ in compliance with CNS's RAP dated June 12, 2009. The next groundwater sampling event is scheduled for January 2016.

SDG Comments

October 28, 2015

SDG I.D.: GBK12306

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS QA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

ND = Present in Blank, no data suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAP LOQ, Limit of Quantitation) ND=Not Detected (RL=Below Reporting Level)

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

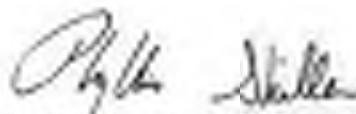

Comments:

Volatile Comment:

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as ordered by the analytical chain-of-custody.

1.0 INTRODUCTION

CNS Environmental Corp. (CNS) was retained by Acadia Realty Trust, LLC to conduct quarterly groundwater sampling for the property located at 4650 Broadway in New York, NY; referred to hereafter as the "subject site".

The subject site is improved with a two-story commercial building with a basement constructed c. 1928, located on the northeast corner of Broadway and Sherman Avenue and currently occupied by a parking garage and a U-Haul Dealer. See Figure 1: Site Location Map.

2.0 BACKGROUND

Based on the findings of a subsurface investigation, gasoline contamination was identified within the groundwater at the subject site. Based on these findings CNS compiled and executed a NYSDEC approved Remedial Action Plan dated June 12, 2009 (NYSDEC RAP Approval Email dated July 10, 2009); bound under a separate cover, which consisted of the removal of Underground Storage Tanks (UST) and associated impacted soils, the installation of monitoring wells and utilized RegenOx™ chemical oxidizer injections, to effectively remediate the groundwater. Note: prior to the RegenOx™ application, CNS collected a round of groundwater samples from each monitoring well to establish a site baseline on March 12, 2009. Upon completion of the remediation, CNS submitted a Remediation Report (Remediation Report dated October 22, 2009 bound under a separate cover) and was subsequently directed by the NYSDEC to collect quarterly groundwater samples.

Sometime after the quarterly sampling event in December of 2012, site contractors destroyed all the on-site monitoring wells. CNS reinstalled the four (4) monitoring wells (MW1 through MW4) as well as an additional monitoring well (MW5) on September 9, 2014 in compliance with the approved June 12, 2009 RAP.

The previous rounds of quarterly sampling were performed on 9/30/2009, 12/29/2009, 3/29/2010, 6/24/2010, 9/30/2010, 12/30/2010, 3/29/2011, 6/24/2011, 10/7/2011, 12/28/2011, 4/13/2012, 9/25/12, 12/31/2012, 10/24/2013, 1/29/2015, 4/8/2015, 7/31/2015, and 10/29/2015.

3.0 FIELD ACTIVITIES

On Wednesday, January 27, 2016, CNS collected groundwater samples from five (5) existing monitoring wells MW1 through MW5 (See Figure II: Monitoring Well Locations). Prior to collecting the groundwater samples, CNS measured the depth to groundwater from the top of the well casings utilizing an electronic Keck Water Level Meter.

Prior to sampling, the wells were purged of 3 to 5 well volumes utilizing a low flow submersible pump with disposable tubing. In addition, after the final well purge within each monitoring well, measurements for temperature, conductivity, pH, dissolved oxygen and oxygen-reduction potential (ORP) were collected utilizing a YSI 556 Multi Probe System within non-chemically analyzed clean sample jars. See Table I for Groundwater Measurements.

The collected groundwater samples were collected in accordance with USEPA "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846) and analyzed for VOCs and SVOCs in accordance with NYSDEC CP-51 Protocols under EPA analytical Methods 8260 and 8270. The groundwater samples were placed in laboratory supplied glassware, packed in an ice-filled cooler accompanied by a chain-of-custody documentation and delivered to Phoenix Environmental Laboratories, Inc. (NYSDEC ID#: 11301) located at 587 East Middle Turnpike, Manchester, CT 06040. See Appendix A for Laboratory Analytical Data Sheets.

The collected groundwater samples were compared against the NYSDEC's Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Groundwater Effluent Limitations (NYSDEC Groundwater Standards). A summary of the analytical results are presented in Table II.

4.0 GROUNDWATER MEASUREMENT PARAMETERS

As indicated in Table I, temperature levels ranged between 61.21 °F through 62.3 °F with an average temperature of 61.61 °F. pH levels ranged between 7.42 through 7.49. Dissolved Oxygen levels ranged between 7.2 through 12.37 mg/l. Qualitative ORP levels ranged from -18.5 through -66.9.

5.0 GROUNDWATER ANALYTICAL RESULT INTERPRETATION

The subject site's baseline groundwater sampling event occurred on March 12, 2009. Current analytical results were compared to the NYSDEC Groundwater Standard values and are summarized herein within Table II on the following page. Analytical results associated with this sampling event are as follows:

MW1: The VOC constituents 1,2,4-Trimethylbenzene (1,000 ppb), 1,3,5-Trimethylbenzene (350 ppb), Ethylbenzene (210 ppb), Isopropylbenzene (51 ppb), m,p-Xylene (1,600 ppb), n-Butylbenzene (10 ppb), n-Propylbenzene (120 ppb), o-Xylene (200 ppb), Toluene (38 ppb), and sec-Butylbenzene (8.4 ppb) exceeded their respective NYSDEC Groundwater Standard of 5.0 ppb. Additionally, Total Xylenes (1,000 ppb) and Naphthalene (120 ppb) were identified exceeding their respective NYSDEC Groundwater Standard of 10 ppb, with Benzene (22 ppb) being identified exceeding its respective NYSDEC Groundwater Standard of 1 ppb. The SVOC constituent Naphthalene was identified at 58 ppb, which exceeds its respective NYSDEC Groundwater Standard of 10 ppb.

When compared to the baseline analytical results, VOC and SVOC constituents have seen an overall decrease in concentrations with sec-Butylbenzene, Toluene and Benzene now being detected above their respective NYSDEC Groundwater Standard in the recent quarter. When compared to the previous quarter's sampling event, constituent concentrations have seen an overall increase with the exception of n-Butylbenzene, and sec-Butylbenzene which have slightly decreased in concentration.

MW2: The VOC constituents 1,2,4-Trimethylbenzene (350 ppb), 1,3,5-Trimethylbenzene (110 ppb), Ethylbenzene (110 ppb), Isopropylbenzene (25 ppb), m,p-Xylene (400 ppb), n-Propylbenzene (36 ppb), and o-Xylene (150 ppb), exceeded their respective NYSDEC Groundwater Standard of 5.0 ppb. Additionally, Total Xylenes was identified at 660 ppb and Naphthalene was identified at 67 ppb, both of which exceed their respective NYSDEC Groundwater Standard of 10 ppb. Additionally, the SVOC constituents 2-Methylnaphthalene and Naphthalene were identified above the laboratory's minimum detection limit (MDL) but below their respective NYSDEC Groundwater Standards.

When compared to the baseline analytical results, all VOC constituents have seen an overall increase in concentration. When compared to the previous quarter's sampling event, 1,3,5-Trimethylbenzene, Ethylbenzene, n-Propylbenzene, and Naphthalene have increased and now exceed their respective NYSDEC Groundwater Standard.

MW3: The VOC constituents 1,2,4-Trimethylbenzene (370 ppb), 1,3,5-Trimethylbenzene (110 ppb), Ethylbenzene (59 ppb), Isopropylbenzene (16 ppb), m,p-Xylene (400 ppb), n-Propylbenzene (38 ppb), o-Xylene (60 ppb), Toluene (10 ppb) and p-Isopropyltoluene (38 ppb) all exceed their respective NYSDEC Groundwater Standard of 5.0 ppb. Additionally, Benzene was identified at 6.8 ppb, Naphthalene was identified at 42 ppb, and Total Xylenes was identified at 490 ppb, all of which exceed their respective NYSDEC Groundwater Standard of 1 ppb and 10 ppb, respectively. The SVOC constituent Naphthalene was identified at 18 ppb, exceeding its respective NYSDEC Groundwater Standard of 10 ppb.

When compared to the baseline analytical results, VOC constituents have seen an overall decrease in concentration, with the exception of p-Isopropyltoluene which has seen a slight increase. Benzene, Toluene and n-Butylbenzene were not originally identified in the baseline analytical, however, are identified exceeding their NYSDEC Groundwater Standards during the current quarter. When compared to the

previous quarter's sampling event, VOC constituents have increased, however the SVOC constituents Benz(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene, and Indeno(1,2,3-cd)pyrene are no longer identified in the current quarter with only Naphthalene exceeding its respective NYSDEC Groundwater Standard.

MFC: The VOC constituents 1,2,4-Trimethylbenzene (910 ppb), 1,3,5-Trimethylbenzene (490 ppb), Isopropylbenzene (56 ppb), m&p-Xylene (18 ppb), n-Butylbenzene (9.2 ppb), n-Propylbenzene (120 ppb), and p-Isopropyltoluene (7 ppb), were identified exceeding their respective NYSDEC Groundwater Standard of 5.0 ppb. Additionally, Total Xylenes was identified at 18 ppb, exceeding its respective NYSDEC Groundwater Standard of 10 ppb.

When compared to the baseline analytical results, VOC constituents have seen an overall increase in concentrations, with the exception of Total Xylenes which has decreased in concentration. When compared to the previous quarter's sampling event, VOC constituent levels have slightly increased. Additionally, multiple SVOC constituents were identified above the laboratory's MDL, however are below the NYSDEC Groundwater Standards, with the previously identified Chrysene currently reported at non-detect.

MBS: The VOC constituents 1, 2, 4-Trimethylbenzene (61 ppb), 1, 3, 5-Trimethylbenzene (20 ppb), m&p-Xylene (17 ppb), and n-Propylbenzene (5.1 ppb) were identified exceeding their respective NYSDEC Groundwater Standard of 5.0 ppb. Additionally Total Xylenes was identified at 20.9 ppb, exceeding its respective NYSDEC Groundwater Standard.

When compared to the baseline analytical results, VOC constituent levels have slightly increased. When compared to the previous quarter's sampling event, VOC levels have increased to levels exceeding the NYSDEC Groundwater Standards; however SVOC constituents detected above the laboratory's minimum detection limit are now below the NYSDEC Groundwater Standards.

 Concentrations exceeding the NYDEC GW Standard are highlighted in red.

6.8 CONCLUSIONS

Gasoline related contamination remains present at the subject site from the past underground storage tanks as observed within the past subsurface investigation and groundwater sampling completed by CNS. In general, VOC levels within the monitoring wells have increased when compared to the baseline sampling event, with the exception to MW1 and MW3 which have seen a decrease in concentrations. Additionally, SVOC concentrations have also generally increased, however monitoring wells MW4 and MW5 reported levels below the NYSDEC Groundwater Standards.

As indicated in Table 1, the groundwater measurement parameters of temperature, pH, dissolved oxygen and oxygen-reduction potential (ORP) indicate favorable ranges for active oxidation and microorganisms; however, dissolved oxygen levels within monitoring wells MW1 and MW4 have decreased since the baseline sampling event.

Due to exceedances of the NYSDEC Groundwater Standards in monitoring wells MW1 through MW5, CNS will continue to monitor the groundwater contaminant levels at the subject site and is requesting to inject RegenOx™ in compliance with CNS's RAP dated June 12, 2009. The next groundwater sampling event is scheduled for April 2016.

APPENDIX C Tank Removal Affidavit

1.0 Introduction

CNS Environmental (CNS) was retained by Acadia Realty Trust, LLC to administer and oversee the removal of a 5,000-gallon Aboveground Storage Tank (AST) located at 4650 Broadway in New York, NY; referred to hereafter as the subject site. See Figure 1: Site Location Map.

The 5,000-gallon AST was located in the basement of the subject site encased in cinderblock. The AST was a single walled steel tank, formerly used for fuel oil storage which supplied multiple boilers.

2.0 Storage Tank Compliance Information

CNS completed a bulk storage and spill database search via New York State Department of Environmental Conservation (NYSDEC) website which identified three (3) removed 550-gallon gasoline USTs, one (1) removed 2,500-gallon #2 fuel oil UST, one (1) removed 5,000-gallon #2 fuel oil UST, and one (1) removed 5,000-gallon #4 fuel oil AST, and one Active Spill (# 09-02240), currently overseen by the NYSDEC.

NYSDEC Tank Number	Installation Date	Size	Contents	Type of Tank	Status
1	NA	5,000-Gallon	#2 Fuel Oil	UST	Closed-Removed (6/1/2000)
2	NA	2,500-Gallon	#2 Fuel Oil	UST	Closed-Removed (6/1/2000)
3	Oct-98	5,000-Gallon	#4 Fuel Oil	AST	Closed-Removed (8/7/2000)
4	NA	550-Gallon	Gasoline	UST	Closed-Removed (8/7/2000)
5	NA	550-Gallon	Gasoline	UST	Closed-Removed (8/7/2000)
6	NA	550-Gallon	Gasoline	UST	Closed-Removed (8/7/2000)

UST Owners Address: 1311 Manhattan Ave, Suite 260, White Plains, NY 10605

UST Owners Telephone Number: NA

NYSDEC Spill # 09-02240

3.0 Field Activities

From Thursday February 11, 2016 through Wednesday February 17, 2016, Mr. Wala Canario, of CNS, oversaw the removal of the said AST by Giuliano Environmental. Prior to removal activities it was determined that the AST has been removed of all product with no residual material remaining. The AST removal activities consisted of the removal of the associated cinderblock encasement and the dismantling of the AST. Upon completion of the dismantling, CNS observed the AST rested on the concrete slab with no staining, therefore end-point samples were not applicable. Additionally, Giuliano Environmental removed the associated fill and vent piping from the street level and sealed the penetrations with cement. See Figure II, Site Plan and Appendix A for Site Photographs.

Giuliano Environmental removed the associated scrap metal waste from the site and disposed of it at Scrap King Flushing, Inc. located at 35-32 College Point Blvd in Flushing, New York for recycling. See Appendix B for Tank Recycle Ticket.

Upon completion of the removal activities a Tank Removal Affidavit was filed with the New York City Fire Department, Bureau of Fire Prevention in accordance with local fire code. See Appendix C for the Tank Removal Affidavit.

4.0 Conclusion and Recommendations

As noted herein, CNS oversaw the removal of a 5,000-gallon AST located in the basement of the subject site. No residual fuel oil product or sludge was encountered within the AST, and the fill, vent and feed lines have been removed in compliance with applicable NYC regulations.

The tank and associated piping were removed from the site for recycling. Additionally, a Tank Removal Affidavit was filed with the New York City Fire Department, Bureau of Fire Prevention in accordance with state and local codes. Based upon the activities completed, No Further Action is required at this time.

If you have any questions or require additional information please call me at (516) 932-3228.

5.0 Project Limitations

This report is written for the use of Acadia Sherman Avenue, LLC and its partners. No other party shall have any right to rely on this report or any service provided by CNS Environmental without prior written consent by Acadia Sherman Avenue, LLC and CNS Environmental.

The above described work was performed in accordance with professional standards applicable to the industry today. The results and contents of this report are subject to revision based on future events and/or investigations. CNS Environmental assumes no responsibility for the property owner's actions related to the following:

- Violation of any federal, state or local statute or ordinance relating to identification or disposal of a hazardous substance or its constituents;
- Undertaking of, or arrangement for the handling, removal, treatment, storage, transportation, or disposal of hazardous substances or constituents found or identified, and
- Changed conditions or hazardous substances or constituents introduced at the properties by Client or third persons to this contract during or after the completion of services provided by this report.

Therefore, the findings, conclusions and recommendations presented herein are based solely on the aforementioned scope of work and information gathering. Incomplete or outstanding information identified throughout this report is considered a limitation to the assessment.

All findings, conclusions and recommendations stated in this report are based upon facts, circumstances and industry-accepted procedures for such services, as they existed at the time this report was prepared. All findings, conclusions and recommendations stated in this reports are based on the data and information provided and observations and conditions that existed on the date and timework was performed. Responses received from local, state, or federal agencies or other out-sourced or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions or circumstances to the report. A change in fact, circumstance or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions and recommendations expressed in this report.

Tank Removal Affidavit

March 27th, 2016

Attn: Supervisor Inspector Jesus Martinez
City of New York Fire Department
Bureau of Fire Prevention
9 Metrotech Center
New York, NY 11201-3857

Re: Removal Of (1) 5,000 Gallon Vaulted AST Containing #2 Fuel Oil @ 4650 Broadway
NY, NY

Dear Mr. Martinez:

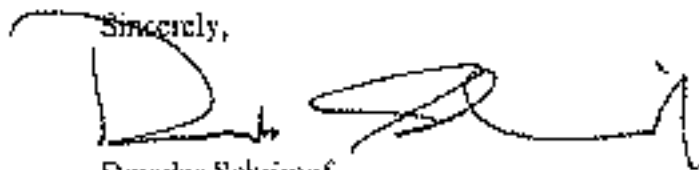

This is a letter of affidavit regarding the removal of (1) 5,000 Gallon AST Containing #2 Fuel at the above referenced address. **Tank was removed in accordance with guidelines described in FC3404.12.13 and R3401-01.** Tank was purged and cut open and cleaned and all tank contents were disposed of at a permitted disposal facility. Tank and all associated piping were removed or filled with concrete and disposed of at a permitted scrap metal facility.

- Work was completed on February 17th, 2016.

Please find attached site map of former tank location.

Should you have any additional questions, please do not hesitate to call me 631-727-2700.

Sincerely,

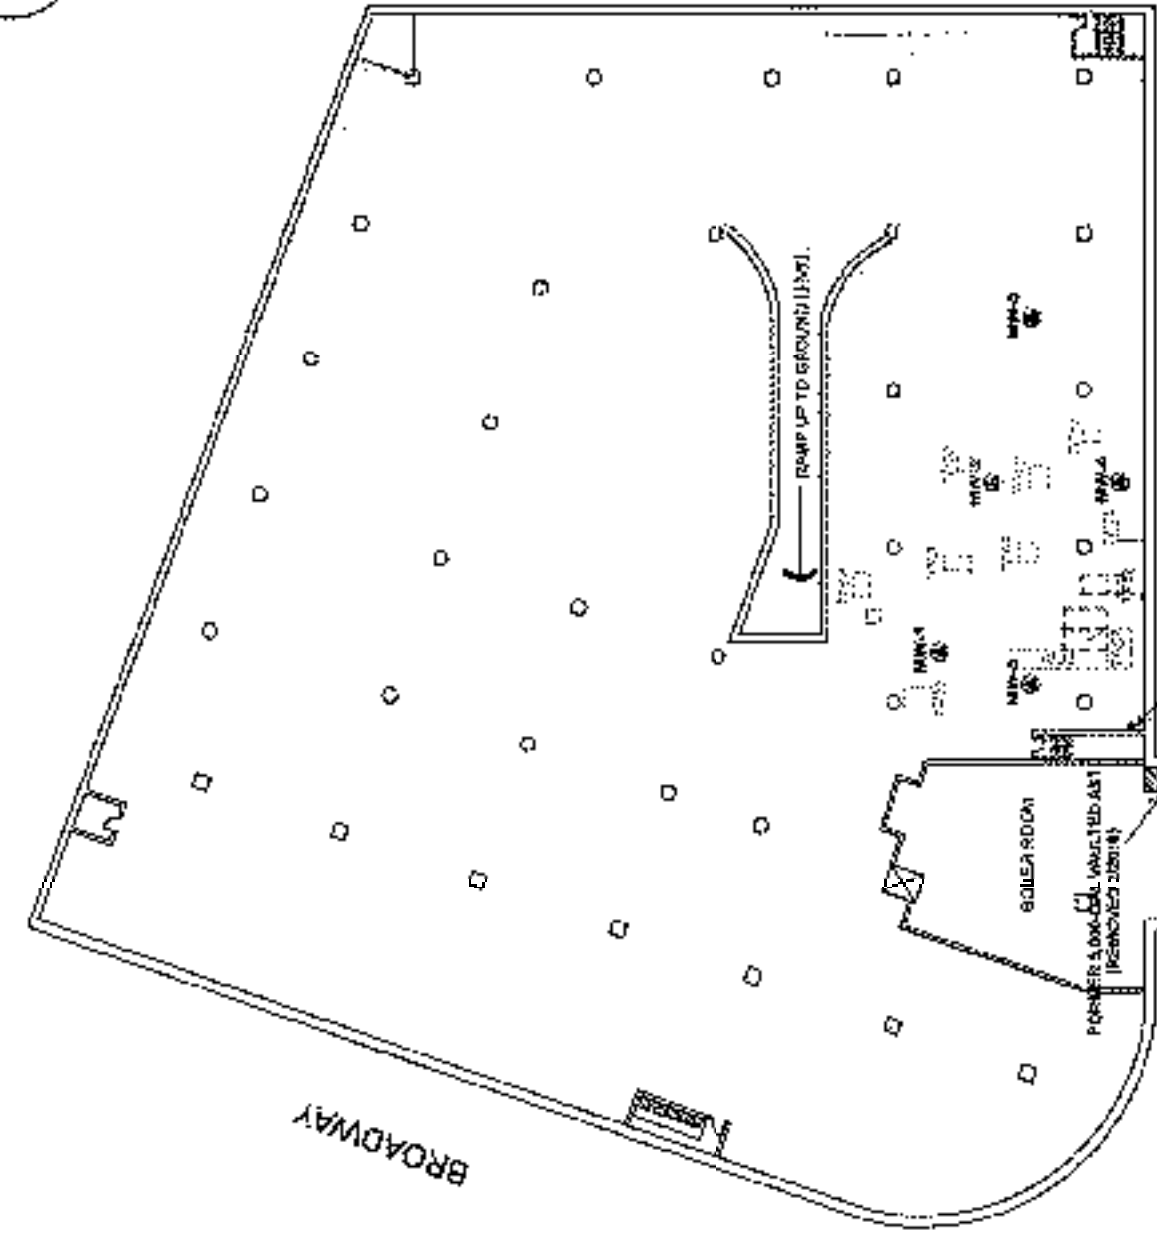

Douglas Schimpf
Vice President

EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) was retained by FBE Limited LLC (the User) to prepare this Phase I Environmental Site Assessment (ESA) for the property located at 4650 Broadway in the Inwood neighborhood of New York, New York (the Subject Property). The Subject Property is identified as Block 2175, Lot 1 on the Manhattan Borough Tax Map. The 47,175-square-foot lot is improved with a two-story parking garage with a full basement and partial sub-cellar. The property is located on the southwestern portion of the city block bound by Dongan Place to the north, Arden Street to the east, Sherman Avenue to the south, and Broadway to the west. The southern portion of the Subject Property building is operated by Park-it Pilot Parking LLC as a commercial parking garage. The northern portion of the building is used for storage of antique cars and construction materials.

This Phase I ESA was conducted in accordance with ASTM International (ASTM) Standard Practice for Environmental Site Assessments E1527-13 and the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) Rule, for the purpose of identifying recognized environmental conditions (REC), historical RECs (HREC), controlled RECs (CREC), and business environmental risks (BER).

Based on information obtained during the visual inspection of the Subject Property; review of environmental databases and historic information; and contact with federal, state, and local agencies; two on-site RECs, one off-site REC, one Non-ASTM Consideration, one BER, and one de minimis condition were identified at the Subject Property. CRECs, and HRECs were not identified.

RECs

A REC is defined by ASTM E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to any release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The Phase I ESA identified the following RECs:

REC 1 – Open Petroleum Spill

Petroleum-impacted soil and groundwater were documented near three historical gasoline underground storage tanks (USTs) and a former petroleum tank room in the southern portion of the basement in 2004 and 2009. New York State Department of Environmental Conservation (NYSDEC) Spill No. 0902240 was reported, and the USTs and petroleum-impacted soil were subsequently removed. Endpoint sampling results indicate that soil impacts were remediated;

however, quarterly monitoring performed through January 2016 indicates that petroleum contamination persists in groundwater and may impact soil vapor.

REC 2 – Historical Vehicle Repair

Vehicle repair was conducted at the Subject Property between about 1928 and at least 1950. Undocumented releases of petroleum, solvents, and/or other hazardous substances may have adversely impacted soil, groundwater, and/or soil vapor.

REC 3 – Off-Site Historical Petroleum Spill and Dry Cleaning Facility

A former petroleum spill and historical dry cleaning facility were located on the southern adjoining property at 107 Ellwood Street/7 Sherman Avenue. NYSDEC Spill No. 0809967 was associated with soil and groundwater contamination originating from a petroleum tank release in 2008. Although the spill was closed in 2013, endpoint groundwater sampling was not documented. A commercial dry cleaning facility was also located at the site between 2001 and 2008. Residual petroleum impacts from the former spill and undocumented releases of chlorinated solvents from the drycleaner may have adversely impacted soil vapor and groundwater at the Subject Property.

Non-ASTM Consideration

A Non-ASTM Consideration is identified by ASTM E1527-13 as an environmental issue or condition at a property that parties may wish to assess in connection with commercial real estate and are outside the scope of ASTM E1527-13. Lead based paint (LBP) identified on interior walls during a May 2009 site survey and potential PCB-containing hydraulic oil in former hydraulic lifts and fluorescent light ballasts are Non-ASTM Considerations.

De Minimis Condition

A de minimis condition is defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Localized staining observed on interior paved parking areas in the first and second floor portions of the garage is considered a de minimis condition. Staining was not observed near storm drains, and the concrete floor near the stained areas appeared to be intact.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) was retained by FBE Limited LLC (the User) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 4650 Broadway in the Inwood neighborhood of New York, New York (the Subject Property). This Phase I ESA was performed for due diligence in support of the potential acquisition of the Subject Property, and in general accordance with ASTM International (ASTM) Standard E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process) and the United States Environmental Protection Agency (USEPA) All Appropriate Inquires (AAI) Rule. The purpose of this Phase I ESA is to accomplish the following:

1. Identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.
2. Provide services consistent with the USEPA 40 Code of Federal Regulations (CFR) Part 312 Subpart C Standards and Practices §312.20 AAI Rule.

1.1 Scope of the ESA

This Phase I ESA was conducted using a standard of good commercial and customary practice that is consistent with ASTM International E1527-13. Any significant scope-of-work additions, deletions, or deviations to ASTM International E1527-13 are noted in Section 8.0 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Subject Property; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Subject Property; and conducting a site inspection. The specific scope of this assessment included the following:

1. A site reconnaissance to characterize conditions and assess the Subject Property's location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of

surrounding properties from public rights-of-way to identify obvious potential environmental conditions on neighboring properties. The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and then progressing to adjoining and surrounding properties. Photographs taken as part of the site reconnaissance are included in Appendix A.

2. An interview with a representative of the User/Client. A telephone correspondence log of the interview is included in Appendix B.
3. A review of available previous environmental reports completed for the Subject Property. Copies of the reports are included in Appendix C.
4. A review of environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search area. The environmental database report was provided by Environmental Data Resources, Inc. (EDR), and is included in Appendix D.
5. Filing of Freedom of Information Act (FOIA) requests with federal, state, and local agencies. Copies of the FOIA requests are included in Appendix E.
6. A review of New York City Department of Buildings (NYCDOB) and a Planning Commission Zoning Map. Available NYCDOB records are included in Appendix F, and the Zoning Map is included in Appendix G.
7. A review of physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soil, and hydrologic data.
8. A review and interpretation of aerial photographs, Sanborn[®] Fire Insurance Maps (Sanborn[®] Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Subject Property. Copies are included in Appendices H, I, J, and K, respectively.
9. A review of an environmental lien search for the Subject Property. A copy of the environmental lien search report is included in Appendix L.
10. A review of published radon occurrence maps to evaluate whether the Subject Property is located in an area prone to elevated radon levels.

1.2 Assumptions, Limitations, and Exceptions

This Phase I ESA report was prepared for FBE Limited LLC (the User) for the Subject Property located at 4650 Broadway in New York, New York (Subject Property). The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any

property other than the Subject Property addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.1, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E1527-13. Intrusive sampling (i.e., soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Subject Property. The purpose of this investigation was limited to determining if there are any RECs affecting the Subject Property. It should be understood that even the most comprehensive Phase I ESA might fail to detect environmental liabilities at a particular Subject Property. Therefore, Langan cannot "insure" or "certify" that the Subject Property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations included in this report are based solely on the specific activities as required for the performance of ASTM E1527-13 and are intended exclusively for the purpose stated herein, at the specified Subject Property, as it existed at the time of our site visit.

2.0 SITE DESCRIPTION

2.1 Location and Description

The Subject Property is located at 4650 Broadway in the Inwood neighborhood of New York, New York and is identified on the Manhattan Borough Tax Map as Block 2175, Lot 1. The 47,175-square-foot lot is improved with a two-story parking garage with a full basement and partial sub-cellar. The Subject Property is located on the southwestern portion of the city block bound by Dongan Place to the north, Arden Street to the east, Sherman Avenue to the south, and Broadway to the west. The southern portion of the Subject Property is operated by Park-it Pilot Parking LLC as a commercial parking garage. The northern portion of the building is used for the storage of antique cars and construction materials. A Site Location Map is included as Figure 1.

According to the United States Geological Survey (USGS) Central Park, N.Y.-N.J. 7.5-minute Series Topographic Quadrangle Map, the Subject Property elevation is about 40 feet above mean sea level (msl). Based on visual observations of the surrounding area, the Subject Property is located in an urban area characterized by multiple-story commercial and residential buildings and a municipal park. A New York City Transit Authority (NYCTA) subway tunnel for the "A" line is located about 300 feet northwest of the Subject Property beneath Fort Tryon Park. Site reconnaissance photographs are included in Appendix A. Adjoining and surrounding property use is summarized in the following table:

Direction	Adjoining Properties			Surrounding Properties
	Block No.	Lot No.	Description	
North	2175	10	Five-story residential/commercial building (4672 Broadway)	Multiple-story residential and commercial buildings and Fort Tryon Park
East	2175	100	Six-story residential/commercial building (20 Sherman Avenue)	Multiple-story commercial and residential buildings and a private school
	2175	113	Six-story residential building (19 Dongan Place)	
South	Sherman Avenue followed by:			
	2174	1	Five-story residential/commercial building (1 Sherman Avenue)	Multiple-story commercial and residential buildings
	2174	8	Six-story residential/commercial building (9 Sherman Avenue)	
West	Broadway followed by:			
	2179	625	Fort Tryon Park	Henry Hudson Parkway and Fort Washington Park

2.2 Description of Subject Property Improvements

Improvements at the Subject Property are summarized in the following table:

SUBJECT PROPERTY IMPROVEMENTS	
Size of the Subject Property	47,175 square feet
Buildings/Spaces/Structures	Two-story parking garage with a full basement level and partial sub-cellar
Surface Water	None
Potable Water Source	New York City
Sanitary and Storm Sewer Utilities	New York City
Electrical Utilities	Consolidated Edison Company of New York, Inc.
Construction Completion Date	1928
General Construction	Concrete masonry and steel
Cooling and Ventilation System	Window-mounted air conditioning unit for the office space
Heating System	Electric space heaters for the office space
Emergency Power	None

2.3 Title Records

Langan researched ownership records for the Subject Property on the Automated City Register Information System (ACRIS) website (<https://a836-acris.nyc.gov/DS/DocumentSearch/Index>). The records indicate that the Subject Property is currently owned by Acadia-P/A Sherman Avenue, LLC. Not all prior deed records could be obtained via ACRIS; however, available title information is summarized below.

Date Filed	Document Type	First Party	Second Party
05/24/2005	Deed	Belmont Operating Corp.	Acadia-P/A Sherman Avenue, LLC

The review of ownership records did not identify RECs associated with the Subject Property.

3.0 USER PROVIDED INFORMATION

3.1 User/Client Interview

Per ASTM E1527-13, Langan interviewed the User/Client regarding specialized information related to the Subject Property. Mr. Jesse Dorfman, owner's representative for FBE Limited LLC was interviewed via telephone correspondence on March 6, 2018. Mr. Dorfman stated that he is not aware of any environmental cleanup liens, land use limitations, chemical releases, or spills at the Subject Property. A telephone correspondence log of the interview is included in Appendix B.

3.2 Previous Environmental Reports

The following environmental reports were reviewed for the Subject Property. Copies of the reports are provided in Appendix C.

Phase I Environmental Site Assessment, dated February 21, 2003, prepared by Soil Mechanics Environmental Services (SMES)

SMES prepared a Phase I ESA for the Subject Property on behalf of Acadia Realty Trust in accordance with the previous ASTM E-1527-00 and 1528-00 standards. The northern portion of the first and second floors of the Subject Property was occupied by offices for the New York City (NYC) Human Resources Administration, and the basement and southern portion of the first and second floors contained a parking garage. SMES did not specify RECs; however, the following potential environmental concerns were discussed:

- Automotive sales and service activity at the Subject Property between 1928 and the 1950's.
- Petroleum bulk storage, including one active 5,000-gallon fuel oil aboveground storage tank (AST), a closed and removed 5,000-gallon fuel oil underground storage tank (UST), a closed and removed 2,500-gallon fuel oil UST, and three closed-in-place 550-gallon gasoline USTs.
- Waste oil drums, oil-like staining on the floor slab, and oil discharge into a floor drain inside the boiler room.
- A dry-cleaning facility (Henry's Cleaners) located at a southern adjoining property.

SMES recommended the following actions:

- Phase II investigation to investigate potential subsurface impacts from historical automotive service activity and petroleum storage.
- Trace dye analysis of interior floor drains to confirm discharge points.

- Registration and decommissioning of the former petroleum storage tanks in accordance with New York State regulations.
- Improvement of housekeeping for the storage of used oil drums, active fuel oil tank, and compressed gas cylinders, and containment of potential discharges from parked cars.

SMES concluded that nearby off-site petroleum storage facilities and commercial businesses were not environmental concerns, based on their relative locations and the absence of reported spills.

Asbestos Survey Report, dated January 21, 2005, prepared by CNS Management Corp.

CNS performed a site-wide asbestos survey on behalf of Acadia Realty Trust in January 2005. CNS identified asbestos containing material (ACM) on the roof, in the basement, and in the northern portion of the building, which was occupied by NYC Human Resources Administration offices. ACM was identified in floor tile, floor tile mastic, pipe insulation, spray-on fireproofing, roofing materials, duct tar, and roof mounted cooling towers. CNS recommended that the ACM be properly removed prior to renovations, or managed in-place with an Operations and Management (O&M) Plan.

Limited Phase II Subsurface Investigation, dated April 21, 2005, prepared by CNS

In January 2004, CNS was retained by Acadia Realty Trust to complete a subsurface investigation that included five soil borings in the basement around the perimeter of the boiler room. Borings west of the boiler room terminated at 2 and 8 feet below the basement slab. Borings east of the boiler room were terminated within a clay layer at 15 and 18 feet below the basement slab. Subsurface soil was described as brown fine loamy sand above clay or bedrock. Groundwater was encountered in two borings east of the boiler room at a depth of about 6 feet below the basement slab. Petroleum staining, odors, and photo-ionization detector (PID) measurements between 56 parts per million (ppm) and 356 ppm were observed in one boring located east of the boiler room. Staining, odors, or other indications of petroleum impacts were not identified in the other borings.

Five soil samples and one groundwater sample were collected and analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). The analytical results were compared to the New York State Department of Environmental Conservation (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) #4046 Allowable Soil Concentrations, Recommended Soil Cleanup Objectives (RSCOs), and Groundwater Standards, which were the applicable standards in 2005. Soil collected from the 4- to 7-foot and 15- to 18-foot depth intervals in one boring east of the boiler room contained the petroleum-related VOCs 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, m,p-xylene, and n-propylbenzene at concentrations

above the TAGM RSCOs. Acetone, a common laboratory artifact, was the only compound detected in the groundwater sample above the New York State Groundwater Standards.

The report concluded that the source of the VOC impacts may be the closed-in-place, 550-gallon gasoline USTs. The report recommended a geophysical survey to locate and evaluate the closed USTs as a contaminant source.

Petroleum Bulk Storage Registration letter, dated September 28, 2005, prepared by CNS

In response to an August 2005 filing violation issued by the New York City Fire Department (FDNY), CNS updated the ownership information for the existing 5,000-gallon fuel oil AST and provided supporting documentation for the removal of two prior fuel oil ASTs. According to the registration application, the AST contained No. 4 fuel oil and was installed on an impervious surface.

Asbestos Operations and Maintenance Manual, dated October 1, 2005, prepared by CNS

Following the recommendations of the January 2005 Asbestos Survey Report, CNS completed an Asbestos Operations and Maintenance (O&M) Manual to establish guidelines mitigating ACM exposure for occupants of the building.

Asbestos Abatement Specifications, dated July 30, 2007 and November 2, 2007, prepared by CNS

On behalf of Acadia P/A Sherman Avenue LLC, CNS solicited bids to remove the ACM identified in the January 2005 Asbestos Survey Report.

Air Monitoring Compliance Report, dated May 14, 2009, prepared by CNS

On behalf of Acadia P/A Sherman Avenue LLC, CNS monitored the abatement of asbestos identified in the January 2005 Asbestos Survey Report. Delta Environmental conducted the abatement between April 28, 2008 and April 2, 2009. A total of 534 cubic yards of ACM waste was removed and transported off-site for disposal. Following abatement, final air monitoring and visual inspections were performed. Sampling results indicated that all airborne asbestos fiber levels were below the regulatory limit for re-occupation of 0.01 fibers per cubic centimeter.

Lead-Based Paint Survey Report, dated May 25, 2009, prepared by CNS

CNS was retained by Acadia Realty Trust to conduct a site-wide survey for lead-based paint (LBP) in April 2009. CNS identified LBP on the interior perimeter walls of the parking garage (southern portion of the Subject Property) and on the walls of the vehicle ramps from the basement to the second floor. CNS concluded that the LBP surfaces were in good condition and could remain in place for management under an O&M Program if unaffected by renovation. CNS recommended lead abatement prior to renovation or demolition of the LBP containing surfaces.

Remedial Action Plan, dated June 12, 2009, prepared by CNS

On behalf of Acadia P/A Sherman Avenue LLC, CNS prepared a Remedial Action Plan (RAP) to address petroleum impacts associated with former USTs at the Subject Property. The RAP describes an investigation conducted between March 30 and April 1, 2009, which included excavation of 11 test pits on the southern portion of the property, east of the boiler room. The test pits were excavated to expose three closed, 550-gallon gasoline USTs and delineate petroleum contamination in soil and groundwater.

Soil observed in the test pits consisted of sandy loam extending about 10 feet below the cellar slab and underlain by clay to about 12 feet below the slab. Soil in the test pits exhibited petroleum odors and organic vapor readings up to 1,153 ppm. Groundwater was encountered between 5 and 10 feet below the cellar slab. Eighteen soil samples were collected from the test pits and analyzed for VOCs and SVOCs. The following petroleum-related VOCs were detected above the TAGM RSCOs in soil samples collected from five test pits: 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, isopropylbenzene, naphthalene, n-propylbenzene, and xylenes. SVOCs were not detected at concentrations above the TAGM RSCOs.

In May 2009, CNS installed four groundwater monitoring wells near the USTs and collected groundwater samples for VOC and SVOC analysis. The analytical results indicated that the following petroleum-related VOCs were detected in each sample at concentrations above the NYSDEC groundwater standards, which were misidentified in the RAP as "TAGM #4046 Groundwater Standards": 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, isopropylbenzene, naphthalene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, and xylenes.

Based on the investigation findings, NYSDEC was notified and subsequently assigned Spill No. 0902240 to the spill. CNS concluded that the contaminants were delineated and proposed (i)

the removal of the three 550-gallon gasoline USTs, (ii) excavation and removal of surrounding petroleum-impacted soil, and (iii) injections of chemical oxidizers to remediate groundwater.

New York City Department of Environmental Protection (NYCDEP) Groundwater Discharge letter, dated July 8, 2019, prepared by CNS

CNS installed two observation wells (OW-A and OW-B) in the northern portion of the basement in May 2009. CNS collected groundwater samples from each well for analysis of parameters required NYCDEP sewer discharge permitting. VOCs, polychlorinated biphenyls (PCBs), and petroleum-related SVOCs were not detected in the groundwater samples.

Remediation Report, dated October 22, 2009, prepared by CNS

On behalf of Acadia P/A Sherman Avenue LLC, CNS implemented the spill remediation as proposed in the June 2009 RAP. From August 5 to 16, 2009, the three closed 550-gallon gasoline USTs were removed along with 1,610 gallons of liquid product waste. The surrounding impacted soil was excavated to about 6 feet below the floor slab and transported off site for disposal. Analytical results from five confirmation sidewall and bottom soil samples indicated that petroleum-related VOCs and SVOCs were below the state regulatory guidelines. Following the removal of the USTs and surrounding petroleum impacted soil, CNS injected 300 pounds of RegenOx[®], a chemical oxidant, into three of the existing monitoring wells. Post injection groundwater samples contained petroleum-related VOCs and SVOCs at concentrations above state regulatory standards.

CNS requested that no further action be required for soil and recommended continued quarterly groundwater monitoring through 2009.

Groundwater Monitoring Reports, dated December 2009 through January 2016, prepared by CNS

CNS prepared 18 quarterly groundwater monitoring reports from December 2009 through January 2016. The reports summarize the collection of groundwater samples from four on-site wells for analysis of petroleum-related VOCs and SVOCs. A fifth well was installed in the basement down-gradient of the remediation area, and was sampled during quarterly events between October 2014 and January 2016. As of the most recent January 2016 report, VOCs and one SVOC, naphthalene, were detected above state regulatory standards.

Phase I Environmental Site Assessment, dated May 2014, prepared by Langan

Langan prepared a Phase I ESA for the Subject Property in accordance with the ASTM E-1527-13 standards. The report was prepared for Washington Square Partners, Inc., a consultant for Acadia P/A Sherman Avenue LLC. The following RECs were identified:

- The Subject Property was formerly identified as a garage and service station and contained a 2,500-gallon fuel oil UST, a 5,000-gallon fuel oil UST, a 5,000-gallon AST, and three 550-gallon gasoline USTs. During removal of the 550-gallon USTs, impacted soil and groundwater were observed, and NYSDEC Spill No 0902240 was assigned. Following injection of RegenOx[®], and continued groundwater monitoring, elevated concentrations of petroleum-related VOCs and SVOCs were detected above regulatory standards, and the spill remained open.
- A gasoline filling station, and manufacturing facility were located proximate to the Subject Property, at 4706 Broadway, and 1 Sherman Avenue, respectively. NYSDEC Spill No. 0809967 was assigned to 1 Sherman Avenue, and administratively closed in 2013. However, records indicate that impacted soil and groundwater remain at the site.

Aboveground Storage Tank Removal Report, dated February 17, 2016, prepared by CNS

CNS performed the removal of a 5,000-gallon fuel oil AST, on behalf of Acadia P/A Sherman Avenue LLC. The report indicates that the former AST rested on a competent concrete slab in the basement, and no staining was observed. The tank was emptied prior to the removal. Field activities included the removal of the cinderblock vault containment, steel tank and all piping components. An affidavit was filed with the New York City Fire Department (FDNY) documenting the tank removal.

Previous Environmental Report Review Conclusions

The Subject Property was used for automotive sales and service between 1928 and the 1950's, and contained petroleum bulk storage since the building's construction in 1928. Subsurface investigations performed in 2004 and 2009 identified petroleum impacts in soil and groundwater near three former gasoline USTs on the southern portion on the Subject Property. NYSDEC assigned Spill No. 0902240 to the Subject Property. In August 2009, the three gasoline USTs were removed along with the surrounding impacted soil. Confirmation samples collected from the base and sidewalls of the tank excavation indicated that petroleum impacts were remediated. Following the tank removal, chemical oxidant was injected into the groundwater. Quarterly groundwater monitoring through January 2016 indicates that petroleum-related VOCs and the SVOC naphthalene remain in groundwater at concentrations above regulatory standards. Additional spill-related information is provided in Section 4.2. The presence of petroleum-impacted groundwater and an open NYSDEC spill is a REC. Potential

solvent and petroleum-related impacts to soil, groundwater, and soil vapor associated with historical vehicle repair at the Subject Property are also considered a REC. Identifiable ACM was abated and removed from the Subject Property in 2009, according to the Air Monitoring Compliance Report. LBP identified in the May 2009 survey report is considered a Non-ASTM environmental concern.

4.0 ENVIRONMENTAL RECORDS

A regulatory database search was provided by EDR and is included in Appendix D. The EDR report provides a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-13. Langan reviewed each environmental database on a record-by-record basis to evaluate whether the identified sites represent a potential for environmental impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Orphan Sites identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below.

The following table lists the number of sites that are identified in standard and additional environmental record databases, are within the prescribed search radius, and appear in the EDR Report.

DATABASE RECORD SUMMARY			
Database Reviewed (Date of Government Version)	Minimum Search Area	Subject Property Listed	Number of Sites Within Minimum Search Area
USEPA DATABASES			
National Priorities List (NPL) (05/30/2017)	1 Mile Radius	No	1
Delisted NPL (05/30/2017)	1 Mile Radius	No	0

USEPA – United States Environmental Protection Agency; NYSDEC – New York State Department of Environmental Conservation; N/A – Not Applicable; databases are reviewed as part of the Phase I ESA but not required as per ASTM International E1527-13.

A description of the reviewed databases is provided in the EDR Report (Appendix D). A summary of sites identified within the prescribed search area is presented below.

4.1 Federal Agency Database Findings

The Subject Property and/or sites within the respective minimum search areas as specified by ASTM E1527-13 were not listed in the following federal agency databases: Delisted NPL, RCRA CORRACTS, RCRA TSD, FINDS, ERNS, US ENG CONTROLS, and US INST CONTROLS.

NPL

The NPL database identifies sites for priority cleanup under the Superfund Program. The Subject Property was not listed in the NPL database; however, one listing, 'Hudson River PCBs', was identified within the minimum search area. The listing refers to a 40-mile stretch of the Hudson River that contains sediment and water contaminated with polychlorinated

biphenyls (PCBs). The Hudson River NPL site is located over 100 miles north of the Subject Property and is not considered a REC.

SEMS (formerly CERCLIS) and SEMS-Archive (formerly CERCLIS-NFRAP)

The SEMS database contains data on potential hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). SEMS contains sites that are either proposed or on the NPL and sites that are in the screening assessment phase for possible inclusion on the NPL. SEMS-Archive sites are sites that have been removed and archived from the inventory of SEMS sites. Archived sites indicate that, to the best of USEPA's knowledge, assessment at a site has been completed and that USEPA determined no further steps will be taken to list this site on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

The Subject Property was not listed in the SEMS and SEMS-archive databases. One listing, 'Hudson River PCBs', was identified within the minimum search area in the SEMS database and is not considered a REC, based on its location more than 100 miles north of the Subject Property.

RCRA Generators Databases

The RCRA Generators database is USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database included selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. LQGs generate over 1,000 kilograms of hazardous waste or over 1 kilogram of acutely hazardous waste per month; SQGs generate between 100 and 1,000 kilograms of hazardous waste per month; CESQGs generate less than 100 kilograms of hazardous waste or less than 1 kilogram of acutely hazardous waste per month; and RCRA Non-Gen are former hazardous waste generators.

The Subject Property was not listed in the RCRA databases; however, 11 listings comprised of Con Edison facilities were identified in the sidewalks and streets adjoining the Subject Property to the west and south. The listings appear to reflect routine maintenance on Con Edison utility service boxes and vaults, and do not indicate releases of hazardous materials. The listings are therefore not considered RECs.

4.2 State Agency Database Findings

The Subject Property and/or sites within the respective minimum search areas as specified by ASTM E1527-13 were not listed in the following state agency databases: SWF/LF, SWRCY, NY ENG CONTROLS, NY INST CONTROLS, CBS, and MOSF.

SHWS

The SHWS records are the states' equivalent to SEMS and may or may not already be listed on the federal SEMS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The Subject Property was not listed in the SHWS database; however, one listing, 'NYCDGS – Public School IS 229X', was identified within the minimum search area. The listing is located over 4,100 feet southeast of the Subject Property and is not considered a REC.

LTANKS

The LTANKS database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The minimum search area for the LTANKS database includes the Subject Property and any sites within a 1/2-mile radius. The Subject Property is listed in the LTANKS database for Spill No. 0112246, which was reported in March 2002 following a tank overfill that resulted in spillage of 40 gallons of No. 4 fuel oil onto the sidewalk. The spill was cleaned up and the case was closed the following day. Records indicate that the spill did not impact the subsurface, and the spill is not considered a REC.

Additionally, 74 LTANKS listings were identified within the minimum search area. The listed incidents were primarily caused by tank test failures, tank failures, and tank overfills. All of the spills associated with the LTANKS listings were granted closed status by the NYSDEC, indicating that NYSDEC is satisfied with spill remediation. Closed LTANKS sites nearest the Subject Property are located at least 300 feet in a hydraulically down-gradient direction. Based on their regulatory status and distance from the Subject Property, the surrounding LTANKS listings are not considered RECs.

SPILLS

The NY SPILLS database, maintained and updated by NYSDEC, is an inventory of sites where spills have been identified and reported to the NYSDEC. The Subject Property was listed in the Spills database as "Acadia P/A Sherman Ave" (NYSDEC Spill No. 0902240). The spill was reported on May 26, 2009 after contaminated soil was observed during an investigation of three 550-gallon gasoline USTs. A summary of the spill discovery and remediation of the spill is provided in Section 3.2. Quarterly groundwater monitoring reports indicate that following an

injection of chemical oxidant in August 2009, petroleum-related contaminants remain in groundwater above regulatory standards. NYSDEC database records indicate that a second round of remedial groundwater injections will be conducted if necessary. The open spill is considered a REC, based on the documented groundwater impacts..

Additionally, 28 listings were identified within a 1/8-mile radius of the Subject Property. These spills were granted closed status by the NYSDEC, indicating that NYSDEC is satisfied with spill remediation. The majority of these nearby spills are located down-gradient from the Subject Property or involved surficial releases that did not impact the subsurface, and are therefore not considered RECs.

Closed Spill No. 0809967 was originally reported at 107 Ellwood Street (southern adjoining; hydraulically cross-gradient) in 2008, following an incidental tank overfill. Petroleum odors and elevated organic vapor readings were observed in the exposed soil during basement renovations in 2013. Soil samples contained petroleum-related VOCs at concentrations detected above the TAGM RSCOs. A subsequent groundwater investigation identified petroleum impacts above water quality standards. Groundwater remediation included the injection of chemical oxidizers; however, confirmation soil or groundwater sample results were not documented. The former spill is considered a REC, based on the potential that residual petroleum contamination may have impacted groundwater and soil vapor on the Subject Property.

PBS UST and AST

The PBS UST and AST databases contain records of registered USTs and ASTs. A registered PBS UST or AST does not constitute a REC in and of itself; however, properties listed on the UST or AST databases with a reported leak, spill, or release could constitute a REC with respect to the Subject Property. The Subject Property was identified in the UST and AST databases for the PBS facilities described below:

Site Name: City of NY HR Administration

Site Address: 4650 Broadway and 2 Sherman Avenue

Description: The site is listed as Facility ID: 2-077666 and is noted as Unregulated/Closed. The following table summarizes the former tanks under this PBS facility number.

Tank No.	Capacity (gal)	Installation/Closure Date	Type	Tank Contents	Status	Secondary Containment
UST 001	5,000	Not Reported / 09/01/1998	Steel/carbon steel	No. 2 Fuel Oil	Closed – Removed	Vault w/o access
UST 002	2,500	Not Reported / 09/01/1998	Steel/carbon steel	No. 2 Fuel Oil	Closed – Removed	Vault w/o access

Tank No.	Capacity (gal)	Installation/Closure Date	Type	Tank Contents	Status	Secondary Containment
AST 003	5,000	Not Reported / 10/01/1998	Steel tank in concrete	No. 4 Fuel Oil	Closed – Removed	Aboveground diking
UST 004	550	Not Reported / 08/07/2009	Fiberglass reinforced plastic	Gasoline	Closed – Removed	Vault w/o access
UST 005	550	Not Reported / 08/07/2009	Fiberglass reinforced plastic	Gasoline	Closed – Removed	Vault w/o access
UST 006	550	Not Reported / 08/07/2009	Fiberglass reinforced plastic	Gasoline	Closed – Removed	Vault w/o access

A gasoline release from the USTs was assigned as NYSDEC Spill No. 0902240, which is documented above in this section and in Section 3.2. Based on the potential for residual soil, groundwater, and soil vapor contamination, the open spill is considered a REC.

PBS facilities were identified at the following adjoining properties:

- 4672 Broadway (northern adjoining property): four active 5,000-gallon No. 6 fuel oil ASTs installed in November 1924 and January 1975 (PBS No. 2-612077)
- 19 Dongan Street (eastern adjoining property): one active 4,000-gallon No. 6 fuel oil UST installed in January 1946 (PBS No. 2-153729)
- 20 Sherman Avenue (eastern adjoining property): one former 5,000-gallon No. 2 fuel oil AST installed in February 1999, and closed and removed in December 2013 (PBS No. 2-334626)
- 1 Sherman Avenue (southern adjoining property): one former 3,000-gallon No. 2 fuel oil AST closed and removed in July 2009 (PBS No. 2-611123)
- 9-21 Sherman Avenue (southern adjoining property): one active 5,000-gallon No. 2 fuel oil AST installed in September 1924 (PBS No. 2-334499)
- 4646-4648 Broadway (southern adjoining property): one active 5,000-gallon No. 6 fuel oil AST installed in August 1999 (PBS No. 2-603931)
- 107 Ellwood Street (southern adjoining property): one active 4,500-gallon No. 2 fuel oil AST installed in February 2011, and one former 3,000-gallon No. 2 fuel oil AST closed and removed in February 2011 (PBS No. 2-189472)

As discussed above, residual impacts from a cross-listed petroleum spill (NYSDEC Spill No. 0809967) at 107 Ellwood Street may have adversely impacted groundwater and soil vapor at the Subject Property. The former spill is therefore considered a REC. The other adjoining PBS facilities are not considered RECs, based on the absence of associated cross-listed spills.

Brownfields

Brownfield sites are any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria, or guidance adopted by the NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations. The Subject Property was not listed in the database; however, one listing, 'BP SS #17889', was identified within the minimum search area. The listing is located over 900 feet southwest from the Subject Property in a hydraulically down-gradient direction, and is therefore not considered a REC.

Voluntary Cleanup Program (VCP)

The VCP uses private funds to remediate contaminated sites to levels allowing for the sites' productive use. The Subject Property was not listed in the VCP database; however, four listings were identified within the minimum search area. Three listings, '148-28 Hillside Avenue', '178-02 Hillside Avenue', and '153-157 Sherman Avenue', are located over 1,000 feet from the Subject Property and are not considered RECs.

The remaining VCP site, 'CE-Broadway/Dyckman St. Station' is located at 12 Dongan, which is about 150 feet north of the Subject Property in a cross-gradient direction. Multiple Con Edison gas holders were located at the site between about 1864 and the 1920's. A 2004 site characterization report indicated that no significant MGP contamination was present at the site, and a no further action letter was issued in September 2005. Based on the regulatory status, the site is not considered a REC.

NY Drycleaners and EDR Historic Cleaners

The NY Drycleaners database is a listing of registered drycleaning facilities. The EDR Historic Cleaners database is a proprietary database that is a listing of potential dry cleaner facilities based on a review of business directories. Drycleaning facilities are associated with the use of tetrachloroethylene (PCE), a solvent that has the potential to infiltrate groundwater and can readily migrate to surrounding properties. The Subject Property was not listed in either the NY Drycleaners or EDR Historical Cleaners databases; however, five listings were identified within the minimum search area. Four of the listings, 'Five Star Cleaners', 'Top Hat Cleaners', 'Nagle Cleaners', and 'Click/Nafco Cleaners', are located over 700 feet east of the Subject Property in a hydraulically down-gradient direction, and are therefore not considered RECs. The remaining listing, 'Henry Cleaners', adjoins the Subject Property to the south (hydraulically cross-gradient) and operated between 2001 and 2008. Based on the potential for releases of undocumented PCE, the former facility is considered a REC.

4.3 Other Database Findings

MGP Sites

The MGP sites database is a proprietary database that includes records of historical manufactured coal gas plants compiled by EDR. The Subject Property was not listed in the database; however, two listings were identified within the minimum search area. The 'Con Edison – Kingsbridge Station MGP' is located over 5,000 feet east of the Subject Property in the Bronx, and is not considered a REC. The 'Con Edison – Broadway/Dyckman St. Sta. MGP' located at 12 Dongan Place was also identified in the VCP database, which indicated that no significant MGP contamination was present at the site; the listing is therefore not considered a REC.

Historical Auto Stations

The Historical Auto Stations database is a proprietary database that includes records of historical auto stations compiled by EDR. The Subject Property was not listed in the database; however, two listings were identified within the minimum search area. The historical facilities are not considered RECs, based on their distances of about 500 feet from the Subject Property.

4.4 Local Regulatory Agency Findings

Freedom of Information Act (FOIA) Requests

FOIA requests were submitted during the week of December 1, 2017 to the following federal, state, and local agencies via written correspondence:

- New York City Department of Environmental Protection (NYCDEP);
- New York City Fire Department (FDNY);
- New York State Department of Health (NYSDOH);
- NYSDEC, Region 2; and
- USEPA, Region 2.

FOIA requests were also submitted to the NYSDEC for spill incidents at the Subject Property and southern adjoining property (Spill Nos. 0902240 and 0809967). Complete responses have not yet been received. Should future responses alter the conclusions of this Phase I ESA, an addendum will be issued. Copies of the FOIA requests and any responses received to date are included in Appendix E.

New York City Department of Buildings (NYCDOB)

Langan conducted a records search through the NYCDOB online query system on November 15, 2017. The Subject Property is identified as Block 2175, Lot 1 with corresponding Building Identification Number (BIN) 1064218. The Department of Finance classification is G1 – Garage/Gas Station, and is not within a special zoning or landmarked district.

There are 16 open NYCDOB and 8 open Environmental Control Board (ECB) violations listed for the Subject Property. The open NYCDOB violations pertain to inadequate inspection records for the elevator, boiler, and energy efficiency documentation. The ECB violations were reported for building and elevator maintenance, fire protection sprinklers, and a failure to vacate. Boiler records indicate that three No. 4 fuel oil-supplied commercial low pressure boilers are installed in the basement at the Subject Property. The three boilers were observed to be out of service during the site reconnaissance (Section 5.0).

Fourteen Certificates of Occupancy (COs) dated from 1927 to 1969 were available for review. Each CO indicates that the Subject Property was occupied by a two-story building with a basement used for various forms of automotive sales, service, and storage. The COs indicate the storage of gasoline and fuel oil between 1948 and 1969. Additional non-automotive uses of the Subject Property indicated on the COs included offices, a restaurant, and bowling alley (1958 to 1964), and a welfare center (1968 and 1969). Historical use of the Subject Property for automotive service, including the storage of fuel oil and gasoline, may have resulted in releases of solvents and petroleum. Historical vehicle repair and petroleum bulk storage is considered a REC. NYCDOB records, including COs, are included in Appendix F.

Zoning Department

According to the New York City Planning Commission Zoning Map 3a, the Subject Property is located within an R7-2 residential district. R7 districts are residential neighborhoods that are typically mapped within medium-density areas of New York City. The Subject Property is not assigned a restrictive 'E' Designation or Restrictive Declaration. A copy of the zoning map is included in Appendix G.

4.5 Physical Setting Sources

4.5.1 Topography

Based on the USGS Central Park, N.Y.-N.J. 7.5-minute Series Topographic Quadrangle Map, the elevation of the Subject Property is about 40 feet above mean sea level (msl). The property slopes gently to the east towards the Harlem River, which is located about 3,500 feet east of

the Subject Property. The Subject Property is located at the base of Fort Tryon Park, which slopes steeply upwards towards the west and reaches an elevation of about 200 feet msl.

4.5.2 Geology

Based on a review of the “Bedrock and Engineering Geologic Maps of Kings and Queens Counties, New York, and Parts of Bergen County, New Jersey” by Charles A. Baskerville, et al. bedrock underlying the Subject Property is part of the Inwood Marble and includes lenses of the Hartland Formation. The Inwood Marble is comprised of a white calcite-dolomite marble and coarse-grained siliceous dolomite. The western Subject Property boundary is congruent with a faulted contact between mica schist of the Manhattan Schist formation and the Inwood Marble. In areas west of the Subject Property within Fort Tryon Park, the Manhattan Schist slopes steeply upward and rock outcroppings are visible. A 2009 Supplemental Geotechnical Investigation conducted by Geo Tech Consultants, LLC identified the top of bedrock between 47 feet and 57 feet below the basement slab.

4.5.3 Hydrology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Based upon local topography, groundwater is inferred to flow to the east towards the Harlem River. During previous environmental investigations (see Section 3.2), groundwater was encountered at about 6 feet below the basement slab.

According to preliminary Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) No. 3604970081F (revised September 5, 2007), the Subject Property falls within Zone X, which is determined to be outside the 0.2% annual chance floodplain.

4.6 Historical Use Information

Langan reviewed available historical resources (including aerial photographs, Sanborn® and topographic maps, and city directories) dated 1893 to 2014. Findings of the review are presented below.

4.6.1 Aerial Photographs

Langan reviewed aerial photographs of the Subject Property and surrounding areas for the years 1924, 1940, 1951, 1954, 1961, 1966, 1974, 1976, 1984, 1991, 1995, 2006, 2009, and 2011. The photographs indicate that the Subject Property was located east of Fort Tyron Park, in a developed urban area as early as 1924. A multiple-story structure is visible on the southwestern portion of the Subject Property in the 1924 photograph. By 1940, the Subject Property was developed with what appears to be the current building. The Subject Property and surrounding area appear relatively unchanged in photographs from 1940 to 2011. Review of the aerial photographs did not identify RECs associated with the Subject Property. Copies of aerial photographs are included in Appendix H.

4.6.2 Sanborn® Fire Insurance Maps

A search for historical fire insurance maps for the Subject Property and surrounding properties was conducted by EDR and reviewed by Langan. Sanborn® Maps constitute a database of prior site uses of real property for many cities and towns in the United States. Langan reviewed Sanborn® Maps for the Subject Property for the years 1893, 1900, 1913, 1935, 1950, 1968, 1969, 1977, 1979 through 1981, 1983, 1985, 1986, 1988 through 1992, 1994 through 1996, and 2001 through 2005. Copies of Sanborn® Maps are included in Appendix I.

Langan's review revealed that the Subject Property was comprised of multiple undeveloped tax lots from 1893 to 1913. The maps indicate that the current two-story building with a basement was constructed over the entire footprint of the Subject Property by 1928. The building was occupied by an automotive garage and service facility. The 1968 map indicates that the northern portion of the building was occupied by NYC offices with an elevator in the northwestern corner, and the southern portion of the building continued as a vehicle repair garage. Two gasoline tanks are shown near the southwestern corner of the building in maps from 1977 through 1994. According to NYSDEC PBS database records, three gasoline USTs were removed from the Subject Property in August 2009. Historical vehicle repair and bulk petroleum storage is considered a REC.

A Consolidated Edison manufactured gas plant (MGP) associated gas holder is shown about 500 feet north of the Subject Property on maps between 1893 and 1913. By 1935, multiple-story residential buildings were constructed throughout the surrounding area, and a subway entrance building was constructed in Fort Tyron Park about 300 feet northwest of the Subject Property. The Subject Property and surrounding area appeared relatively unchanged in maps from 1950 to 2011. As discussed in Section 4.0, a site characterization report indicated that

significant MGP contamination was not identified at the former gas holder site north of the Subject Property.

4.6.3 Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Subject Property. Quadrangle maps were available for the Subject Property for the years 1897, 1898, 1900, 1947, 1956, 1966, 1979, 1997/1998 and 2013. On maps from 1897 to 1900, the Subject Property appeared to be undeveloped with few surrounding structures. A northwest-southeast trending inlet of the Harlem River estuary was located about 1,400 feet east of the Subject Property, and an eastward flowing creek was located about 600 feet south of the Subject Property. The 1947 map indicates that the former inlet and creek were reclaimed and developed with roads and buildings, and the Subject Property was located within a dense urban setting. The undeveloped and embankment surrounded area west of the Subject Property was first labeled as Fort Tryon Park in 1956. The Subject Property building is shown on maps from 1947 to 1998, and the surrounding area appears relatively unchanged between 1956 and 2013. Review of the historical topographic quadrangles did not identify RECs associated with the Subject Property. Copies of the topographic maps are included in Appendix J.

4.6.4 City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1920 through 2014. The directory was obtained for the Subject Property and surrounding area. A copy of the City Directory Abstract report is included in Appendix K.

City Directory listings for the Subject Property included automotive garages, service centers, and motor companies from about 1934 to 2014, a bowling alley in 1963, and New York City offices between 1973 and 2014. Historical listings at nearby properties generally included residential, commercial office, and retail tenants. Based on the potential for unreported releases of solvents, petroleum compounds, and other hazardous substances, historical use of the Subject Property for vehicle maintenance is a REC.

4.6.5 Environmental Lien Search

Langan contracted EDR to conduct an environmental lien search for the Subject Property. The result of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, did not reveal environmental liens or other

Activity and Use Limitations (AUL) associated with the Subject Property. A copy of the environmental lien search is provided in Appendix L.

5.0 SITE RECONNAISSANCE

The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and progressing to the adjacent and surrounding properties. The assessment of the adjacent and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures.

The site reconnaissance was performed at 9:00 AM on December 1, 2017 by Ken Simmons of Langan. Mr. Simmons was accompanied by Mr. Edward Garcia, the on-site manager of the parking garage. Mr. Garcia has been employed at the Subject Property since 2015. The weather at the time of the inspection was partly cloudy and about 45 degrees Fahrenheit (°F).

5.3 General Subject Property Setting and Reconnaissance Observations

The Subject Property is occupied by Park-it Pilot Parking LLC, a commercial parking facility, and is improved with a two-story parking garage with a full basement and partial sub-cellar. The southern portions of the first and second floors are used for commercial vehicle parking. An office and restrooms are located at the southwestern corner of the first floor garage. The northern portion of the first floor is used for the storage of antique automobiles, construction materials, automotive maintenance supplies, and disassembled hydraulically-powered vehicle lifts. The northern portion of the second floor is vacant. The basement is used for commercial parking. A partial sub-cellar in the southwestern portion of the property contains the boiler room and former tank room. A vehicle ramp and four staircases provide access from the basement to the second story. The roof is accessed by two staircases.

The sub-cellar contains three unused boilers, water heaters, fire protection water lines, and a former petroleum tank room. The former tank room contains fuel pumps and exhibited petroleum odors. Three monitoring wells and patched concrete indicative of former soil borings were observed in the basement near the entrance to the sub-cellar boiler room. According to Mr. Garcia, the wells and borings were installed within the last year; however, previous environmental reports indicate that the wells were installed in 2009 prior to preparation of the Remedial Action Plan (see Section 3.2). Soil is exposed along the southern interior wall of the basement.

The elevator indicated on Sanborn Maps was not observed; however, the northwestern corner of the property contains a concrete-enclosed shaft way that was likely a former elevator shaft.

Mr. Garcia was not aware of an elevator at the Subject Property. According to Mr. Garcia, the heating ventilation and air conditioning (HVAC) equipment on the roof and the boilers in the sub-cellar are not functional. These components were identified in the Asbestos Survey Report and may have been decommissioned during the asbestos abatement in 2009, as documented in the Air Monitoring Compliance Report (see Section 3.2).

Pits, Ponds, Lagoons

Pits, ponds, and lagoons were not observed.

Pools of Liquid

Pools of liquid were not observed.

Storm Drains, Wells, and Cisterns

Storm drains were observed on the roof and on each floor of the garage, including the basement and sub-cellar. Staining was not observed near the drains; however, localized oil staining was apparent on the concrete floors throughout the garage.

PCB Transformers and Hydraulic Equipment

Transformers were not observed. Hydraulically-powered vehicle lifts were disassembled and stored on the northern portion of the first floor. A hydraulic fluid compressor was stored on a wooden pallet. Staining, plastic, and absorbent material indicative of former hydraulic fluid leaks was observed on the floors near the disassembled hydraulic lines. Active vehicle lifts and evidence of former in-ground lifts were not observed.

Storage Containers, Drums, and Chemical Storage Areas

Chemical storage was observed in the northern portion of the first floor. About 50 gallons of paint and sealant were stored on the concrete slab. About 40 five-gallon containers of sodium hydroxide-based automotive paint stripper were stored on a wooden pallet. Staining or other indications of a release were not observed in the chemical storage areas.

Several fluorescent light tubes were stored in closets throughout the garage. These lamps commonly contain mercury, and may impact the Subject Property if broken or mishandled.

Sewage Ejector Pits and Sumps

Sumps were observed in the sub-cellar boiler room. Floor staining was not observed near the sumps. A sewage ejector pit was not observed.

Waste Generation, Storage, and Disposal

Domestic refuse is stored in a rolling dumpster on the first floor. According to Mr. Garcia, the waste is collected and disposed by a private disposal contractor.

Air Emissions or Wastewater Discharges

Air emissions and wastewater discharges were not observed.

USTs or ASTs

USTs or ASTs were not observed at the Subject Property. Fuel pumps and petroleum-like odors were observed in the former AST room in the sub-cellar. Historical ASTs and USTs at the Subject Property are discussed in Sections 3.2 and 4.0. Exposed soil near the southern interior wall of the basement may be the former location of three USTs.

Monitoring Wells or Remedial Activities

Three monitoring wells and evidence of soil borings were observed in the basement near the sub-cellar boiler and former tank room. Environmental reports indicate that the wells were installed in 2009 (see Section 3.2). Monitoring wells were also observed in the adjoining Arden Street and Dongan Place sidewalks.

Stained or Discolored Soil

Exposed soil observed in the southern portion of the basement was not stained or discolored. Soil is not exposed elsewhere on the Subject Property.

Leachate or Seeps

Evidence of leachate or seeps was not observed.

Adjoining and Surrounding Property Uses

The Subject Property is bound to the north by a mixed-use commercial and residential multiple-story building; to the east by two multiple-story residential buildings; to the south by Sherman Avenue followed by mixed-use commercial and residential multiple-story buildings; and to the west by Broadway and Fort Tryon Park. An NYCTA "A" line subway tunnel is located west of the Subject Property underneath Fort Tryon Park, and an NYCTA vent structure is located about 260 feet northwest of the Subject Property. Surrounding properties generally include multiple-story commercial and residential buildings and parks.

Monitoring wells were observed on the adjoining Dongan Place and Arden Street sidewalks. Multiple fuel oil tank fill and vent ports were observed on the sidewalks bordering the northern adjoining buildings along Dongan Place.

Site Reconnaissance Conclusions

Disassembled hydraulic vehicle lifts and buckets of paint remover on the northern portion of the property provide evidence of historical vehicle repair. Absorbent material near the severed hydraulic lift lines indicates that hydraulic oil spilled onto the basement concrete floor slab. Fuel pumps and petroleum-like odors in the sub-cellar tank room are indicative of a potential petroleum release. The exposed soil, monitoring wells and patched boreholes in the basement are indicative of historical investigations associated with NYSDEC Spill No. 0902240. The petroleum spill, corresponding investigation and remediation activities, and the historical use of the Subject Property, including petroleum bulk storage, are discussed in detail in Sections 3.0 and 4.0. Soil, groundwater, and potential soil vapor impacts associated with Spill No. 0902240 are considered a REC. Potential soil, groundwater, and soil vapor impacts associated with historical vehicle repair operations, including releases from the former hydraulic lifts and solvent use, is also considered a REC.

6.0 INTERVIEWS

6.1 Site Owner

The site owner was not interviewed as part of this Phase I ESA.

6.2 Site Occupants

Mr. Edward Garcia, the on-site manager, was interviewed during the site reconnaissance. With the exception of the aforementioned spill investigations, he was not aware of environmental concerns or incidents associated with the Subject Property. Mr. Garcia's responses to interview questions were incorporated into the text of Section 5.0, as necessary.

6.3 Owners/Tenants of Adjoining Properties

Owners/tenants of adjoining properties were not interviewed as part of this Phase I ESA.

7.0 ADDITIONAL SERVICES

7.1 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

The USEPA has established a recommended radon action level of 4.0 picoCuries per liter (pCi/L). According to the USEPA Radon Zone Map, the Subject Property is located in Zone 3, which indicates a predicted average indoor radon screening level less than 2 pCi/L. The NYSDOH maintains a database of radon test results on a local and county level. According to the NYSDOH, 121 basements and 64 first floor spaces have been tested for radon in New York County. The results indicate that about 11% of basements and 3% of first floor spaces have radon concentrations above the USEPA action level of 4 pCi/L. Based on this information, it is unlikely that elevated levels of radon gas exist in the soil vapor beneath the Subject Property.

7.2 ACM, LBP, and PCBs

A formal survey to identify ACM, LBP, and PCB-containing material was not conducted as part of this Phase I ESA. As documented in the Air Monitoring Compliance Report summarized in Section 3.2, the Subject Property was abated for ACM. CNS identified LBP on interior walls of the parking garage, as shown in the Lead-Based Paint Survey Report (see Section 3.2). LBP and potential PCB-containing materials are likely present in building materials at the Subject Property.

8.0 DEVIATIONS AND DATA GAPS

8.1 Deviations

Langan performed a Phase I ESA of the Subject Property using a standard of good commercial and customary practice that is consistent with the ASTM E1527-13 and the 40 CFR Part 312 Standards and Practices for AAI. Significant deviations were not made to the above-referenced standards.

8.2 Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I was completed without significant data gaps except for the following:

- Responses to FOIA letters have not been received from all federal, state, and local agencies.
- Parked cars obstructed observations of portions of the basement floor slab.

Sufficient information was provided from other sources to enable conclusions regarding RECs at the Subject Property. These data gaps are not expected to alter the conclusions of the Phase I ESA. If information becomes available that alters the conclusions of this report, an addendum will be issued.

9.0 FINDINGS, OPINIONS, AND CONCLUSIONS

This Phase I ESA was conducted in accordance with ASTM E1527-13 and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC.

Based on information obtained during the visual inspection of the Subject Property, review of environmental databases and historical information, and contact with federal, state, and local agencies; three RECs, one Non-ASTM Consideration, one Business Environmental Risk (BER), and one de minimis condition were identified. Controlled RECs and Historical RECs were not identified.

RECs

A REC is defined by ASTM E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to any release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The Phase I ESA identified the following RECs:

REC 1 – Open Petroleum Spill

Petroleum-impacted soil and groundwater were documented near three historical gasoline USTs and a former AST room in the southern portion of the basement in 2004 and 2009. NYSDEC Spill No. 0902240 was reported, and the USTs and petroleum-impacted soil were subsequently removed. Endpoint sampling results indicate that soil impacts were remediated; however, quarterly monitoring performed through January 2016 indicates that petroleum-related contamination persists in groundwater and may impact soil vapor.

REC 2 – Historical On-Site Vehicle Repair

Vehicle repair was conducted at the site between about 1928 and at least 1950. Undocumented releases of petroleum, solvents, and/or other hazardous substances may have adversely impacted soil, groundwater, and/or soil vapor.

REC 3 – Off-Site Historical Petroleum Spill and Dry Cleaning Facility

A former petroleum spill and historical dry cleaning facility were located on the southern adjoining property at 107 Ellwood Street/7 Sherman Avenue. NYSDEC Spill No. 0809967 was associated with soil and groundwater contamination originating from a petroleum tank release in 2008. Although the spill was closed in 2013, endpoint groundwater sampling was not documented. A commercial dry cleaning facility was also located at the site between 2001 and

2008. Residual petroleum impacts from the former spill and undocumented releases of chlorinated solvents from the drycleaner may have adversely impacted soil vapor and groundwater at the Subject Property.

Non-ASTM Consideration

A Non-ASTM Consideration is identified by ASTM E1527-13 as an environmental issue or condition at a property that parties may wish to assess in connection with commercial real estate and are outside the scope of ASTM E1527-13. Lead based paint (LBP) identified on interior walls during a May 2009 site survey and potential PCB-containing hydraulic oil in former hydraulic lifts and fluorescent light ballasts are Non-ASTM Considerations.

De Minimis Condition

A de minimis condition is defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Localized staining observed on interior paved parking areas in the first and second floor portions of the garage is considered a de minimis condition. Staining was not observed near storm drains, and the concrete floor near the stained areas appeared to be intact.

11.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312-10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. They have developed and performed the AAls in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are provided in Appendix M.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 05/30/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	WNW 1/4 - 1/2 (0.258 mi.)	0	17

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 08/10/2017 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	WNW 1/4 - 1/2 (0.258 mi.)	0	17

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 08/10/2017 has revealed that

EXECUTIVE SUMMARY

there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/15/2017 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/31/2017 has revealed that there are 74 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 13 NY UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 4 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 10/31/2017 has revealed that there are 28 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 80 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - BROADWA	12 DONGAN PLACE	N 0 - 1/8 (0.034 mi.)	C35	96

CON EDISON - KINGSBR	BLOCK 3236, LOT 25 A	E 1/2 - 1 (0.960 mi.)	403	979

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

DEC Memo:

"Sangesland spoke to Charles Powers at CNS Management. He's the environmental consultant for the site and has soil and groundwater data to show there is heavy contamination. Mr. Powers will e-mail a copy of his lab work to DEC for review. Once this groundwater/soil data comes in, the case may be referred to Remediation. Acadia Realty Trust, LLC 1311 Mamaroneck Ave, Suite 260 White Plains, NY 10605 Mr. Thomas Julius, Director of Non-conforming assets pbs- 2-077666 9/22/11- DEC Piper spoke with Charles Powers. He will sent reports for review. 12/9/15- Left message with Charles requesting info/ report. Latest Quarterly Report in DEC Docs. . In 2009, 3 - 550 gasoline USTs were removed along with a 5k heating oil tank. Residual contamination existed and an ORC injection was performed. The site is currently being monitored on a quarterly basis and will be looking into a second round of ORC injection if deemed necessary by remediation. Referred to remediation. 3/31/16 - Austin - Transferred to Remediation Section B (Vadim Brevdo) for further work - end"
Remarks: "CALLER STATES THAT 3 550 GALLON USTs WITH GASOLINE WERE DISCOVERED. THERE IS SOIL CONTAMINATION AND CLEAN UP IS PENDING."

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977,

HUDSON RIVER PCBs (Continued)

1000384273

PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology

companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CE - BROADWAY /DYCKMAN ST. STATION (Continued)

S109580153

Updated By: RXSCHICK
Site Description: The site is located on Broadway in Manhattan, between Dongan Place and Arden Street. It is currently occupied by an apartment building complex. A series of gas holders were constructed on the site starting in 1864 and occupied the site until the early 1920s. A Site Characterization was performed in December 2004. No significant MGP contamination was encountered and a no further action letter was issued in September 2005. A release and covenant not to sue was issued by DEE. No ECs/ICs required.
Env Problem: A Site Characterization was performed in December 2004 which identified no impacts to the environment.
Health Problem: Public water is provided to the area, thereby preventing exposures to groundwater. Public exposures are not expected since the investigation of the site found little evidence of waste material.

Investor, LLC 1775 Broadway, Suite 510 New York, NY 10019
08/22/08-Vought-See also spill #08057914 for separate location owned
by same RP. 1/15/09 On 12/31/08, received letter from Asher Taub
attorney of Alatsas and Taub, P.C. dated 12/29/08 requesting closure
of spill. Letter included passing tank tightness test report. Tank is
AST. called Mr. Taub today. (718)891-1200. Told him i need closure
letter explaining why tank failed, repairs, and contamination. bf bf
01/26/10-Vought-DEC Sangesland received call from attorney for Dermot
Properties (Evan Katin-Borland Ph:646-822-1321) who noted that he was
calling concerning DEC legal case and requested further information.
8/18/11 Received letter on 8/17/11, dated 3/31/11, from Bob urban of
Pro Test. Failure was due to a dry leak. The return line at the
connection to the tank and a portion of the fill line inside the tank
room was the cause of failure. Both line were repaired. No visible
contamination was found. Tank passed tightness test on 3/29/11. NFA.

Contact Name: ERIC (HESS OIL)
DEC Memo: "08/21/08-Vought-Off hours responder. Called Eric Sutphin (Hess 908-392-0136) and as per Eric AL Eastmond on site and spill on concrete in rear of property and oil ran down wall and affected concrete on adjacent property as well. Two drains affected and no spill inside. Vought called AL Eastmond (718-378-3000) and spoke to Troy and both drains were concrete bottomed and AL Eastmond returning to site today to finish powerwashing second drain and concrete as well. As per Troy no cracks in concrete or pathways to subsurface. Vought discussed site with DEC Austin who suggested that confirmatory site visit be performed by DEC Patel. Vought spoke to Patel who will perform site visit. 08/22/08-Vought-DEC Patel performed site visit and concrete in good condition and site was clean including impacted alleyway and adjacent property. Spil closed by Vought. "

Remarks: "OVERFILL. SPILL IS ONTO CONCRETE IN REAR OF BUILDING. SPILL IS CONTAINED. EASTMAN & SONS ON SITE FOR CLEAN UP."

DEC Memo: "12/08/08-Zhune spoke to Joe Ostrowski from Petroleum Tank Cleaners (718)624-4842. He said we cleaned the tank on Friday 12/04/08. We put oil and the tank leaked from the bottom. Spill cleaned.
12/12/08-Zhune spoke to Paula Madritao (212)889-0201 Ext. 305 from Gateway ventures LLC. she said PTC cleaned the spill approximately 30 gallons. Spill was contained in the tank room. Concrete floor No drains, no soil impacted. PTC installed a temporary tank they will test the old tank. Lidia Montoya **property manager** Gateway Ventures LLC. 243 5th Ave, Suite 701 New York, NY 10016 Ph. (212) 889-0201 (212) 684-4141 Ext. 313 (818) 822-5132 (C) (818) 907-0800 (O) email: lidiain@ gmail.com 12/16/08 A CSL letter was sent to Robin Ignico at the above address. 12/18/08- Zhune spoke to Mark Salamack from PTC. He said they cleaned the tank. The oil company filled it up. Later on they called PTC saying tank was leaking. PTC empty the tank out put a temporary tank. Tank is sitting on soil. They cleaned as much as they can but still they have to remove the tank and clean. they need new tank. 01/09/09-Hiralkumar Patel. received another complaint (spill #: 0811168) from Island tank. Vinny reported spill of 2000 gal from tanks. visited site. met Bill (646-215-1168) at the site. Bill mentioned that management is handling two buildings on Ellwood Street: 97-105 Ellwood st (spill #: 0810144) and 107-119 Ellwood st (spill #: 0809967). both buildings have 3000 gal aboveground tanks sitting on floor. both tanks were in use to store #2 oil. both tanks were found leaking and has open spill cases. Bill mentioned that they found contaminated material around tanks and after cleaning those material, found leak from tanks on tank room floor. management hired PTC who removed product from tanks and cleaned those tanks from inside. found tanks in poor condition. Bill mentioned that management is planning to replace these tanks. both buildings have two 275 gal temporary ASTs. no soil investigation has done to confirm any contamination under tank room floor. PBS #: 2-189472. PBS expired on 04/17/08. received call from Chris from Gateway Ventures. they are currently getting proposals for tank repair. he mentioned that owner wants to repair these tanks. tanks will be cut from bottom and new bottom plate will be installed and then tanks will be installed on saddles. as there is no room above tank at 107-119 Ellwood street, owner is planning to lower tank room floor by excavating concrete and some soil. and there will be no change in elevation at 97-105 Ellwood street location. explained him that the department can wait for tank repair/replacement but requires confirmation that there is no contamination under any tank. told him that the department requires soil investigation under the tank for any contamination. asked him to call DEC Veronica on 01/12/09 with their decision regarding soil investigation. also asked him to renew PBS registrations for both tanks. Chris Darbidian or Sal Guyomi Ph. (212) 684-4141 Ext. 311 email: christmaint@ gmail.com Carol Lillienfeld 212-683-3344 212-286-8481 sent email to Chris with PBS renewal forms and instruction. 01/22/09-Hiralkumar Patel. received message from Ms.

Montoya requesting list of contractors for required soil investigation. sent email to Ms. Montoya with list of contractors. **refer to spill #: 0810144 for next door site under same managment.**06/01/10- miller 06/01/10-Zhune. Miller Environmental Group Inc. emailed the Report. Report dated 11/4/09 Equipment failure was discovered and an unknown amount of # 2 fuel oil was released. The client has stated that the above ground storage tank (AST's)located in the basement of the building were cleand and refill with #2 fuel oil. Immediately after fill up, the oil was observed leaking from the AST'. An Environmental cleaning company came to the site and removed the remaining oil from the tank and cleaned up any spill in the basement area. Later on, the AST's were cleaned and removed from buildings and temporary AST's were put into service. On October22, 2009, MEG advanced four (4)borings at the AST bed. Soil samples were taken at depth of S-1 3-4', S-2 4-5', S-3 4-5', S-4 2-3'. Perched groundwater was encountered 4 to 5 feet below grade. Refusal was found in S-1 4'bg. Borings S-2, S-3, S-4 has strong olfactory emanations and high PID readings. The soil analitical results indicated VOC's above the NYSDEC TAGM 4046 in sample S-2 (1.3.5 Trimethylbenzene 3800 ug/kg,)and sample S-3 (1,2,4 Trimethylbenzene 32000 ug/kg, 1.3.5 Trimethylbenzene 11000 ug/kg, Naphthalene 18000 ug /kg, Total xylenes 1200 ug/kg). SVOC's were detected above tha NYSDEC TAGM 4046 in samples S-1(Benzo(a)anthracene 300 ug/kg) and S-3 (Naphthalene 19000 ug/kg). The Subsurface Investigation Work Plan dated 2/27/13 proposes the installation of (4) borings surrounding the replacement AST and one(1)groundwater sample that will be collected from the top of the water table. The Subsurface Investigation Report dated April 19, 2013 was received and reviewed. Four (8) borings were drilled surroundinf the AST, S-4 through S-11. Two soil samples were collected from each boring. Groundwater samples from each soil boring were collected from 3 feet to 7 feet below the basement grade in borings SB-9 and SB-10 and from 5 feet to 9 feet below the basement slab in borimngs SB-4, SB-5, SB-6, SB-7, SB-8 and SB-10. The soil analitical result detected no concentrations of VOCs in any of the soil samples collected. Six SVOCs were detected above the acceptable limit in sample SB-9. The result of groundwater sample analysis detected petroleum impacts above the water quality standards in five (5) samples GW-4, GW-5, GW-6, GW-7 and GW-11. The Remedial Action Report dated October 29, 2013 was received and reviewed. On August 23, 2013 the ORM injections were conducted at six locations correspondimg with the prior soil borings SB-4, SB-5, SB-6, SB-7, SB-8 and SB-11. "

Remarks:

"CALLER STATES THAT THEY CLEANED A TANK TODAY AND NOW THEY GOT A CALL STATING THAT AFTER THE TANK WAS FILLED THERE IS A SPILL IN THE BASEMENT. THE BOTTOM OF THE TANK IS ROTTED. CLEAN UP IS PENDING. TANK IS A 3000 GALLON VAULTED, PRODUCT IS CONTAINED TO THE VAULT."

leak 3 or 4 days ago 12/05/08 from the first tank. Both tanks/cases will be managed by Veronica Zhune. 12/16/08 A CSL letter was sent to Robin Ignico at: Gateway Ventures LLC. 243 5th Ave, Suite 701 New York, NY 10016 12/18/08- Zhune spoke to Mark Salamack from PTC. He said they cleaned the tank. The oil company filled it up. Later on they called PTC saying tank was leaking. PTC empty the tank out put a temporary tank. Tank is sitting on soil. They cleaned as much as they can but still they have to remove the tank and cleaned underneath the tank. They need new tank. PBS #: 2-254614. PBS expired on 04/17/08. see notes for spill #: 0809967 for more details. **refer to spill #: 0809967 for next door site under same managment.** 06/01/10- miller Environmental Group Inc. sent the report The client has stated that the (2)two above ground storage tank (AST's)located in the basement of the building were cleand and refill with #2 fuel oil. Immediately after fill up, the oil was observed leaking from the AST'. An Environmental cleaning company came to the site and removed the remaining oil from the tanks and cleaned up any spill in the basement are. Later on, the AST's were cleaned and removed from buildings and temporary Ast's were put into service. On October 22, 2009, MEG arrived at the 107-119 Ellwood street location and advanced four (4)borings at the AST bed 02/05/13- John Schretcmayer from Associate Environmental called. He said the owner of the building hired Associate Environmental to close this spill. 7/19/13 Associated Environmental Services, Ltda sent the Subsurface Investigatio Report dated April 19, 2013. Natural gas was installed with a boiler conversion at 97 Ellwood Street. Three soil borings were installed within the former footprint of the AST and a total of six soil samples were collected from the three borings. Groundwater samples wee collected from each boring at three to seven feet below the basement grade. The soil analitycal result indicate no VOCs and no SVOCs detected in any of the eight samples collected. The groundwater analitycal result inicate one VOC detected toluene at 14 microgram per liter (ug/lit) slightly exceeding the water quality standards. Spill Closed."

DEC Memo: "Sangesland spoke to Rob Hill at Castle. Castle driver overfilled the tank. Approx 25 gal of #6 spilled onto a dirt area. As of 2PM they have dug down approx 3 or 4 inches deep. Sangesland asked Castle for photographs showing the original spill on the ground (taken when cleanup crew first arrived) and a photo of the area after all excavation is completed (before clean fill is put back in the hole) 11/14/06-Hiralkumar Patel. spoke with Rob Hill at Castle oil. he has hired Petroleum for cleanup. as per Mr. Hill, PTC has removed about 4 drums of contaminated soil. Mr. Hill has some photographs after they done excavation, which he will email me. 11/20/06-Hiralkumar Patel. spoke with Mark at PTC. they have removed 15 drums of contaminated

dirt from tank room as well as outside at vent. no soil excavation done at site. as per Mark, area was mostly clean after they removed this dirt. spoke with Mr. Hill. he will send photographs in email. 11/21/06-Hiralkumar Patel. visited site. spoke with Richard (212-942-9080), super at building. as per super, during oil delivery due to high pressure, petrometer gauge line got ruptured. they have replace this line. as per super, there was no oil spill inside tank room. spill was at vent pipe. area around vent pipe is clean now. as looking photographs from Mr. Hill, found one photograph which shows oil spill inside building and also shows oil on wall. doesn't know which part of building it is. left message for Mr. Hill to explain this photograph. during site visit i haven't walked through tank room, so not sure whether any oil spill inside tank room or not. spoke with Mark at PTC to know whether there was any oil spill inside tank room or not. Mark will call back once he check with his technician. spoke with Mr. Hill. he explained that the oil on wall inside tank came through window close to vent pipe. this window was open during oil delivery and whatever oil spill, part of that splashed inside window into tank room. as per Mr. Hill there is no leak in any pipe. spoke with Richard, super of building. he mentioned that some oil came through window. other than that there is no any oil stain inside tank room. based on site observations and available information, case closed."

Contact Name: JAMES WILSON
DEC Memo: "3/9/16: J.Kann - spoke with Bob Hammon of RND Services (845-348-6355). He indicated that his company was called in by the church/school after oil was observed in a drain last week. His crew opened up the concrete in an outdoor stairway platform where the drain is (a 4'x3' area) and saturated soils and product were observed. RND field personnel indicated that the oil observed was dark and either weathered no. 2 or no. 4. The oil was in the process of being vacced out. Minimal odors were noted in the area of the excavation. Removed soils are being drummed. A former sidewalk underground fill line was located. Currently the site is serviced by an AST, aboveground fill and vent. Reverend Antonio of the church was contacted. He confirmed that there were no odors in the building (to his knowledge). 3/11/16: J.Kann - A CSL is was drafted and sent indicating work should only be done during non-school hours. Rashad was the runner for the day and spill was assigned to him. 3/14/2016: Rashad 71 Arden Street has an alternate address of 71-89 Arden Street. PBS#2-081337 has a 1,500 gallon #2 fuel oil AST. Sharima from WCB Group called and said they have soil borings scheduled for 3/30/16 (which is a Wednesday), she wanted to know if community air monitoring was necessary at this time, she also noted school will not be in session this day. I told her she can proceed with soil borings without community air monitoring for the soil boring activities based on that school will not be in session and only soil borings will be taken. 4/20/2016: Rashad Sent email to Sharima: I am just following up on Spill#1511665 for 71 Arden Street, is there any update on the work currently being done there? Have you received the results of the soil borings taken on 3/30/16? Thank you. Sharima responded: We were at the site yesterday, coincidentally. I was planning on sending you an update but in lieu of that I am attaching the email I sent to the client last night. We are in receipt of the soil sample results (attached here). The results did not indicate a significant impact to the subsurface beneath the sidewalk. I am in the process of preparing a formal report. Please let me know if there is any additional

CHURCH SCHOOL (Continued)

S118636602

information you require at this time. Thanks, Sharima sent me email string of her and owner as well as analytical data. Email string is a summary of work on site and is as follows: On 4/14 Sharima sent email: Since we installed the recovery sumps on March 22, 2016 we have not returned to recover any oil from the sumps. When we were drilling on April 1, we observed approximately of oil in the inside sump and 1/8 in the outside sump. I have been looking into options for automatically recovering and am working on various options for the site. In the meantime it is my opinion that it would behoove the facility to have the sumps pumped out at this time. We may have a break in our schedule and can accomplish this tomorrow. Please let me know if this is something you would like us to do. We performed this similar service at Saint Brigid. PS. The NYSDEC project manager has asked that whatever we do at the site, that he be kept abreast of the activities. David responded: Send someone tomorrow and report on how much oil they pump out so we know for the future. Sharima: We did not make it on Friday so will be at the site tomorrow. I will email with a status at the end of the day tomorrow. Sharima wrote on 4/19: We visited the site today. We measured inch of oil in the first sump we installed (Sump-1 Outside, installed March 10, 2016) and 8 of oil in the second sump we installed (Sump-2 Inside, installed March 23, 2016). Both sumps are 15-inches in diameter. We pumped both sumps with a transfer pump. The oil water mixture recovered was pumped into three (3) drums that are presently on-site. We waited approximately 1 hours for the sumps to recharge. Sump-1 recharged with 2 inches of water and a film of oil. Sump-2 recharged with 8 inches of water and a film of oil. We did not pump out the sumps a second time. This is the first time we have pumped the sumps out since they were installed. I recommend a re-visit to the site in approximately two weeks to evaluate the recharge rate of the oil and at that time we can consider options for on-going recovery. However, if there is substantial rain prior to the two weeks, I would recommend an earlier visit. I will include this information in a formal letter to the NYSDEC case manager. Please let me know if you have any questions. Email string and analytical results will be uploaded to D2. 8/1/2016: Rashad Sent email to Sharima: How is the work progressing at this site? Are you still encountering oil in the sump pits? Thanks. 8/2/2016: Rashad Received email from Sharima: Our last visit at the site was May 12. We pumped out both sumps at that time. The oil level is much reduced and we only see a film of oil now. After pumping the recharge shows minimal sheen in both sumps. 8/10/2016: Rashad Review of analyticals submitted on April 1st are as follows: SB-1 (11-12ft): 1,2,4 trimethylbenzene: 44ppm, 1,3,5 trimethylbenzene-12ppm, ethyl benzene-11ppm, isopropylbenzene-5.1ppm, methylcyclohexane-9.1ppm, n-propylbenzene-10ppm, xylene-41ppm, toluene-1.6ppm, 2-methylnaphthalene-4.05ppm SB-2 (12-13ft): 1,2,4 trimethylbenzene-4.7ppm SB-3 (11-12ft): No exceedances SB-4 (12-13ft): No exceedances SB-7 (11-12ft): ND SB-8 (12-13ft): ND Sent email to Sharima: Thank you for the update below, what is the plan moving forward? Will you continue monitoring sumps? Also in regards to the soil samples collected on April 1st, was a site plan developed showing where borings were taken and were additional soils removed after the samples were collected? Thank you. Received email from Sharima: We will most likely go back to the sumps for now. I believe we will be able to clean it up however, we have also tossed ideas around for automatic recovery but have not moved on any other option yet for recovery. We have a site sketch (attached) - we have not

CHURCH SCHOOL (Continued)

S118636602

turned it into a more formal drawing yet. We have not conducted any soil removal as the samples did not indicate that this was warranted. Results of soil samples attached. 2 documents were attached to email, they were uploaded to D2. 10/27/2016: Rashad Received email from Sharima with report. Report has been uploaded to D2. Review of report is as follows: The reported release was first suspected on March 3, 2016 when they were asked to clean up an oil/water mixture on the floor of the boiler room. It appeared that the oil water mixture was entering the boiler room from around a drain pipe located at the bottom of the outdoor stairs landing that led into the boiler room. WCD began removing product and discovered an old unsealed remote fill was observed along the street curb however it did not appear to have been used. A new fill pipe was installed about 2 years ago. WCD investigated possible sources of the fuel oil seen in the basement by removing the concrete landing at the bottom of the stairs. Upon encountering free product at 12 inches below grade the spill was reported. The drain line was exposed during excavation, at the point where the drain penetrated the wall, a breach had occurred which served as a pathway for the oil seen on the basement floor. A section of the drain was removed and 6 drums of affected soil was removed from below the landing area and around the pipe sections below the boiler room floor. The breach in the wall was sealed with hydraulic cement. On March 10, 2016 a 15 inch by 42 inch galvanized perforated pipe was installed in the excavation at 48 inch bg to act as a recovery sump. Filter fabric was placed at the base of the sump over which 12 inches of gravel was installed. A fan was installed to mitigate vapor impacts to the school. WCD installed a secondary recovery sump inside that basement about 10 feet away from Sump 1. During installation of the second sump, separate phase product was again observed about 12 inch bg. Sump-1 53 inch deep: 4/19/16 - 0.25 inches of product. 5/12/16 - sheen. 9/29/16 - 6 inches of product. Sump-2 48 inch deep: 4/19/16 - 8 inches of product. 5/12/16 - film. 9/29/16 - 7 inches of product. Groundwater was encountered at depths of 11-15 ftbg. 6 discrete soil samples were taken. Boring results are as follows; SB3, SB5, SB6, SB8, and SB10 were not sampled due to no PID hits; SB-1 (11-12ft): 1,2,4 Trimethylbenzene-44ppm, 1,3,5 Trimethylbenzene-12ppm, ethylbenzene-11ppm, xylene-41ppm. SB-2 (12-13ft): 1,2,4 Trimethylbenzene-4.7ppm SB-3 (11-12ft): ND SB-4 (12-13ft): Under unrestricted SB-7 (11-12ft): ND SB-8 (12-13ft): ND The soil sample results indicate that there is minimal residual petroleum impacted soil located adjacent to the building which may have been the result of the spill mentioned by the principal as having occurred 2 years ago. Any release from the spill appeared to have been confined along the building foundation wall and accumulating below the landing and basement floor in the area of the sumps. WCD recommends the on-gong passive recovery of separate phase product from the sumps by the installation of a Geotech™ Filter buckets in the sumps. The Geotech™ Filter Bucket is a floating passive skimmer equipped with a visual alarm to indicate when the 2-liter capacity bucket is full. When the bucket is full the oil will be manually transferred to a 55-gallon DOT drum. Due to the minimal observance of petroleum affected soil, no recommendation for soil remediation is made. It is anticipated that residual separate phase product will be captured over time. Once the accumulation in the sumps have diminished to less than a sheen (we believe less than a year based on other similar release situations), a request for spill closure will be made. 1/17/17 - Obligado - Spill transferred from

S118636602

Omar to Obligado as per Austin. 1/30/17 - Obligado - I called Sharima Ryan at WCD. I left a message to call back the NYSDEC. 2/6/17 - Obligado - I emailed Sharima Ryan and cc'd to David Minervini requesting an update on the site. 2/13/17 - Obligado - I received an email from Sharima. Yes, we implemented a passive recovery system and I had forwarded a letter summarizing such to Omar but perhaps in the transition it was not received. I have attached it here. If after you read this you need additional information please let me know. We are scheduled for a site visit the end of this month to monitor/measure/recover product. 3/1/17 - Obligado - I inspected the site and met James from WCD. Free phase product was present in sump2 and the passive bailer was nearly full. I recommended they do more frequent recovery events. 3/15/17 - Obligado - After review of the site file and in consideration of my site inspection I determined the extent of the plume has not been defined. SB1 and SB9 in the sidewalk had extensive contamination from the surface to the water table, indicating the release occurred beneath the sidewalk and traveled down to the water table. It is highly probable that there is floating product underneath the sidewalk. It is unknown whether the recovery sump within the building basement is recovering product from underneath the sidewalk. The Department requires the following: 1) more frequent product removal from the sumps/recovery devices 2) Delineation of the free product plume - 3 monitoring/recovery monitoring wells, 1 in the sidewalk and 2 downgradient in the alley way. I sent a requirement letter to Mr. Minervini at Aramark requiring submission of a workplan for the delineation within 30 days. 4/24/17 - Obligado - I extension request submitted by Sharima Ryan. She requests additional time to gain off-site access in the neighboring alleyway which is owned by the adjacent building. I approved the extension request. 5/11/17 - Obligado - I received an email from Sharima Ryan with photographs of the alley way stating that it would be difficult to install wells in that area. I responded that while traditional drilling methods may not be feasible, due to the shallow depth of water wells could be installed via other methods, such as with a Vactron, by hand, or with a Limited Access Geoprobe rig. I sent an letter to the adjacent property owner requesting 65 Arden Realty Corp provide access to WCD to install the 2 off-site monitoring wells. 6/22/17 - Obligado - I reviewed and approved the IWP. 10/2/17 - Obligado - I received an email from Mr. Minervi indicating they were not able to get access and they requested my help. 10/25/17 - Obligado - I called Steve Kaplan who is the property manager at 65 Arden. He said he was willing to provide access and that Sharima should contact him directly. I emailed Mr. Minervi and told him to call Steve Kaplan to arrange the access agreement."

Remarks: "found contamination during investigation"

04/23/2009 as 10 gal #6 oil spilled to the pavement due to broken gauge. case closed. spill # 1216538 was reported on 03/19/2013 as 20 gal #2 oil spilled onto concrete sidewalk due to faulty gauge. case closed. spill # 1300913 was reported on 04/26/2013 due to tank test failure. case closed and merged with the subject spill.

05/06/13-Hiralkumar Patel. 12:28 PM:- spoke with Bob at Protest. he mentioned that a tank system test was performed on 04/30/13 which failed. they performed isolation test today and found leak in remote fill line and vent line. Bob mentioned that tank and supply/return lines are tight. 12:30 PM:- spoke with Ms. Santana. informed her that the department requires further investigation of the leaking fill line and cleanup of any associated spill. she mentioned that the leaking fill line will be replace. she will talk to Protest. asked her to call for an inspection prior to backfilling the fill line excavation. 1:07 PM:- sent letter to Ms. Santana requiring cleanup of any spill associated with leaking lines. asked her to submit report by the end of 06/21/13. letter emailed to Ms. Santana and Bob.

05/08/13-Hiralkumar Patel. 3:29 PM:- spoke with Bob. he mentioned that Protest will submit work proposal for required investigation. he mentioned that field work along leaking fill line is not possible until scaffolding is removed, which is located right in area of the remote fill line. Bob confirmed that the remote fill line has been capped to prevent future oil deliveries. 06/05/13-Hiralkumar Patel. 2:04 PM:- spoke with Ms. Santana. she mentioned that scaffolding along Sherman Ave (where remote fill line located) will be removed within two weeks and then only NYC DOT will issue permit to open sidewalk for fill line replacement. informed Ms. Santana that the department must be informed prior to backfilling the excavation along remote fill line. 06/06/13-Hiralkumar Patel. 8:15 AM:- received email from Tom. he requested two week extension to submit report.

06/07/13-Hiralkumar Patel. 3:01 PM:- sent email to Tom approving two week extension. asked him to submit report by 07/08/13.

06/24/13-Hiralkumar Patel. 9:18 AM:- received email from Bob from Protest. he mentioned that DOT permit should be received this week and they are planning to start work on 07/01/13. 07/01/13-Hiralkumar Patel. 1:20 PM:- received email from Bob. they removed remote fill line and discovered contamination in two locations: a small spot near the curb and more near the building. 3:10 PM:- spoke with Bob and scheduled site visit tomorrow at 9 AM. 07/02/13-Hiralkumar Patel. 9:00 AM:- visited site. met crew from Protest. as per crew, old fill line was about 3 inches below surface near the curb and about 8 inches below surface near the building's foundation wall. observed old fill pipe. found petroleum product on elbow under the fill port indicating leak near elbow. observed contaminated soil in excavation near curb. also observed two holes in old fill line. these holes were found in section which was close to foundation wall. Protest crew started removal of contaminated soil from area close to foundation wall. found large boulders in excavation. as per crew member, there is more contamination under the boulder, so they will remove the boulder. based on observations during site visit, it looks like there is more contamination horizontally. 11:49 AM:- spoke with Bob. due to proximity to building's foundation wall, size of boulders in excavation and possible need for larger excavation, asked Bob to consult with structural engineer (for both building safety and pedestrian/resident's safety) prior to any deeper/wider excavation under the sidewalk. asked Bob to call for an inspection prior to backfilling the excavation. also asked him to record observations

LEMLE WOLFF MANAGEMENT (Continued)

S113494302

during field work. 11:52 AM:- spoke with Ms. Santana and Chris Anelante (Ms. Santana's supervisor). informed them about observations during site visit today. strongly suggested them to consult with structural engineer to ensure safety. informed Ms. Santana and Mr. Anelante that the Department must be informed prior to backfilling of the excavation. Mr. Anelante inquired about other remedial methods. informed him that prior to finalizing remedial method, the department requires complete delineation of contamination. they will discuss with consultant and will call back next week with answer: excavation or in-situ remediation. 12:43 PM:- sent email to Ms. Santana suggesting consultation with structural engineer. asked her to call for site visit prior to backfilling. informed her that contamination must be delineated completely prior to finalizing remedial method. 07/08/13-Hiralkumar Patel. 1:57 PM:- left message for Ms. Santana. 07/10/13-Hiralkumar Patel. 2:49 PM:- spoke with Ms. Santana. she mentioned that a large boulder found in excavation. due to safety reason, they stopped work. structural engineer is inspecting the area on 07/12/13. based on his inspection, they may continue further excavation. Ms. Santana mentioned that prior to any further excavation, if possible, they have to finish rehab work and remove sidewalk scaffolding, which may be done in four weeks from now. asked Ms. Santana to provide copy of structure engineer's report. informed Ms. Santana that the department may require installation and monitoring of groundwater monitoring well(s), regardless of results of excavation. 07/30/13-Hiralkumar Patel. scheduled a site meeting at 9:30 AM tomorrow. 07/31/13-Hiralkumar Patel. 9:15 AM:- visited site. met Nick Recchia (GEI Consultants) and Ed Miller (Lemle & Wolff). informed them about on-going spill remediation at 50 Thayer St (spill #: 9514651). inspected remote fill line excavation. excavation was not expanded since earlier site visit on 07/02/13. found large boulders in excavation. found oil impact on eastern sidewall of the excavation, towards 50 Thayer St. asked Mr. Miller to submit structural engineer's inspection report. due to large boulders in excavation, Mr. Miller is not sure about further excavation. asked him to call back by the end of 08/07/13 with final decision: either further excavation with shoring or delineation. informed him that the department requires complete delineation of contamination. suggested Mr. Miller to install monitoring well(s) during delineation as they need heavy machine due to boulders under sidewalk and possible shallow bedrock. Nicholas Recchia GEI Consultants, Inc. Ph. (631) 759-2973 (O) (516) 395-8763 (C) email: nrecchia@geiconsultants.com Edmund Miller Lemle & Wolff, Inc. Ph. (718) 884-7676 Ext. 219 (917) 567-5173 (C) email: EMiller@LemleWolff.com 08/02/13-Hiralkumar Patel. 12:21 PM:- received email from Mr. Miller including structural engineer's report. Steven Kaplan, licensed engineer, recommended no further excavation and stated that removing boulders or bedrock from underneath the sidewalk will negatively impact the structural stability of the building and sidewalk area. 08/09/13-Hiralkumar Patel. 2:16 PM:- left message for Mr. Miller. 08/12/13-Hiralkumar Patel. 11:40 AM:- spoke with Nick. he got approval on cost estimate for delineation. he is planning to install three bedrock wells: one at leaking fill line location, one at intersection of Sherman Ave and Arden ST and one in between. he will submit work plan with details. 11:50 AM:- sent email to Mr. Miller. informed him that endpoint soil samples must be collected and analyzed from fill line excavation area. asked him to submit schedule for sampling and backfilling, so duplicate soil samples can be collected by DEC contractor (as part of

LEMLE WOLFF MANAGEMENT (Continued)

S113494302

ongoing PIN job at 50 Thayer St). email copied to Nick.
08/13/13-Hiralkumar Patel. 12:59 PM:- received email from Nick. he mentioned that due to safety concerns, the fill line excavation was backfilled after site visit on 07/31/13. Nick proposed to install soil boring in former fill line excavation area. 1:26 PM:- sent email to Nick. informed him that based on available information, soil boring is needed in former fill line excavation area. 1:27 PM:- spoke with Nick. informed him about soil must be sampled during boring/well installation. he will submit work plan, including schedule, for soil and groundwater sampling. 08/16/13-Hiralkumar Patel. 12:03 PM:- received email from Nick including work plan for bedrock well installation. Nick proposes to install three (3) 2-inch bedrock wells to 15 ft depth. he also proposes to collect two soil samples using soil borings. soil borings will be completed to the top of bedrock or drilling refusal, using split spoon samplers. soil and groundwater samples will be analyzed via 8260/8270. 12:31 PM:- spoke with Nick. informed him that wells must be installed to a minimum depth of five ft below water table, which may be deeper than 15 ft. also, the department requires continuous split spoon sampling during investigation in the former leaking fill line area. due to the release of viscous #6 oil, suggested Nick to install at least four inch wells. Nick will talk to Mr. Miller. 12:35 PM:- left message for Mr. Miller. informed him that borings must continue until clean zone found. suggested him to install 4 inch wells, instead of proposed 2 inch wells. 12:45 PM:- spoke with Dave Lothior at EnviroTrac. informed him about proposed delineation at the site. asked him to review proposed work plan for any comments/suggestions. 12:55 PM:- forwarded work plan to Dave for review. 2:03 PM:- received email from Dave. he suggested installation of two wells on Sherman Ave sidewalk and two wells on Arden Ave sidewalk. he also suggested that wells should be installed to a depth of 20 ft bg. 08/19/13-Hiralkumar Patel. 10:17 AM:- received email from Mr. Miller. he mentioned that scaffolding/sidewalk bridge may be removed by the end of this month. 1:16 PM:- sent email to Dave requesting call back. 3:45 PM:- received call from Dave. discussed the proposed work plan. Dave will send comments on the proposed work plan. 08/28/13-Hiralkumar Patel. 2:17 PM:- spoke with Dave. he will submit comments on proposed work plan, by 09/04/13. 09/20/13-Hiralkumar Patel. 2:05 PM:- received email from Dave including letter with recommendations, after reviewing the proposed work plan from Nick. - instead of three wells in line on Sherman Ave sidewalk, Dave recommends installation of one well in vicinity of remote fill line, one well on the corner of Arden St and Sherman Ave and one well on Arden St, approx. 20 to 30 ft from corner - based on groundwater depth found at Verizon site, Dave recommends well installation to a minimum depth of 20 ft, unless conditions observed during drilling warrant otherwise - due to the potential for the presence of free product, well should be four inch in diameter - all borings/wells should be advanced and sampled continuously until bedrock is encountered 10/15/13-Hiralkumar Patel. 12:43 PM:- left message for Nick. 10/17/13-Hiralkumar Patel. received email from Nick (at 8:34 PM on 10/16/13) stating that scaffolding was removed this week. 10:12 AM:- sent letter to Mr. Miller, including copy of recommendation letter from EnviroTrac, and asked to submit a revised work plan by the end of 11/29/13. letters emailed to Mr. Miller, Nick and Dave. 11/06/13-Hiralkumar Patel. received email from Nick (at 3 PM on 10/31/13) including revised work plan. Nick proposed to collect soil samples from each borehole using split spoon sampling

techniques. split spoons will be collected at the surface (0-2 ft) interval and at 5 ft increments (5-7 ft, 10-12 ft) and at the soil/groundwater interface. three (3) 4-inch wells will be installed. soil samples with high PID readings and groundwater samples will be analyzed for VOCs and SVOCs. 10:36 AM:- sent work plan approval letter to Mr. Miller and asked to submit investigation report by the end of 02/28/2014. letter emailed to Mr. Miller, Nick and Dave. 11/07/13-Hiralkumar Patel. 6:14 AM:- received email from Nick. he scheduled bedrock well installation on Nov. 18 and 19th. 9:54 AM:- spoke with Dave. he will check schedule and confirm availability. 11/19/13-Hiralkumar Patel. 10:00 AM:- visited site with DEC Vought. met with Dave and Nick. Allied drilling started installing well at the corner of Arden St and Sherman Ave. left site at 1 PM. Vought will visit site again tomorrow to inspect well installation in the area of remote fill line. 11/21/13-Vought-Site visit by Vought while wells being installed at 52 Arden Street as part of investigation of fill line contamination. Onsite was EnviroTrac (Lorthior), EEA and Allied Drilling. Three monitoring wells were installed (one on Arden Street adjacent to 52 Arden, one on southwest corner of intersection of Arden and Sherman Avenue and one well at former fill line of 52 Arden Avenue). Initial field observations showed a few drops of oil on water in well on Arden adjacent to 52 Arden Avenue and also showed some sheen on water at boring at fill line. No heavy oil, olfactory signs of oil or PID readings noted in soil samples at fill line however some grey discolored soil noted. Vought noted that due to lack of field evidence of contamination at fill line that only one well was needed at this location and second boring at fill line as proposed in the Work Plan was no longer required. A total of seven soils samples will be submitted for analysis (and at location of fill line, samples for analysis will be the two deepest dry samples). Vought spoke with EnviroTrac Lorthior who noted that wells across Sherman Avenue had not been gauged in a long time and Vought required that all wells (onsite and off-site) be gauged in two weeks as agreed upon with EEA. 12/11/13-Hiralkumar Patel. 9:30 AM:- visited site. met Dave, member of GEI and Mr. Miller. EnviroTrac and EEA collected water samples from wells installed at the site. no free phase product noted in wells. 02/06/14-Hiralkumar Patel. received email from Nick (at 8:12 AM on 02/05/14) including investigation report. abstract: - three(3) 2-inch wells were installed to a depth of 20 ft bg - split spoon samples were collected at the surface (0-2 ft) interval and continuously at 2 ft intervals until bedrock was encountered - bedrock was found to be at a depth of approx. 20 ft below sidewalk surface - soil samples B-2 (11-13 ft) and B-2 (15 ft) had slight petroleum odors and slight elevated PID readings - as per boring log, found oil in water during installation of boring B-2 ----- - groundwater samples were collected on 12/11/13 - slight petroleum odor and sheen were observed in the sample collected from MW-2 ----- - no VOC compounds found in soil or groundwater samples - some SVOC compounds were found above cleanup standard in soil sample from 11-13 ft depth in boring B-2; but no SVOCs found in deeper soil at 15 ft depth the investigation report is missing following: - scaled site map with boring/well locations, fill line location - depth of water table in each well - site-specific groundwater flow direction also, the department has not received a report for tank system tightness testing and removal of leaking fill line. 02/07/14-Hiralkumar Patel. 2:41 PM:- left message for Mr. Miller. 2:44 PM:- left message for Nick. 3:49 PM:- received call from Erik Curran from GEI. informed him

about missing information in the submitted investigation report. asked him to submit a revised report. also informed him that based on observation of petroleum impact in B-2/MW-2, the department requires at least one more round of groundwater monitoring and sampling. he will discuss with property owner. 02/10/14-Hiralkumar Patel. 11:56 AM:- received message from Mr. Miller. he will submit report for work done by Protest. he will also discuss with GEI about groundwater monitoring/sampling. 04/08/14-Hiralkumar Patel. received email from Nick (at 8:22 AM on 04/07/14) including report. second round of groundwater sampling conducted on 03/03/14. no observations of petroleum product or sheen were made in samples collected from three wells. the general direction of groundwater flow was found to be towards the southwest. no contamination noted in the groundwater samples. the report is missing lab package. 8:29 AM:- sent email to Nick and asked to submit lab package for recent groundwater sampling. 8:46 AM:- left message for Mr. Miller inquiring about report from Protest. 12:42 PM:- received email from Nick including lab package for recent groundwater sampling. 04/15/14-Hiralkumar Patel. received email from Mr. Miller (at 12:23 PM on 04/14/14) including result of tank only test conducted by All-Boro on 10/05/12. email does not include any document regarding Protest's remote fill line work. 04/16/14-Hiralkumar Patel. 3:21 PM:- left message for Mr. Miller. 05/01/14-Hiralkumar Patel. 11:58 AM:- received message from Tom Leddy from Protest. 12:03 PM:- spoke with Tom. he inquired about documents needed from Protest. asked him to submit report for work done by Protest. 05/09/14-Hiralkumar Patel. received email from Tom (at 4:03 PM on 05/08/14) from Protest including letter describing work done by Protest. Tom mentioned that Protest removed nine (9) 55 gal drums of contaminated soil after removing an old remote fill line. the letter from Protest does not mention about holes found in remote fill line which were observed during the site visit on 07/02/13. 06/26/14-Hiralkumar Patel. discussed with DEC Vought. based on available information/data, no further work needed. Vought mentioned that the three existing monitoring wells at the site can be used as part of well network under spill #: 9514651. 3:17 PM:- left message for Mr. Miller. 06/30/14-Hiralkumar Patel. 9:26 AM:- received message from Mr. Miller. 10:32 AM:- spoke with Mr. Miller. informed him that based on available information/data, the department does not require any further investigation/remediation under the subject spill and case will be closed today. requested Mr. Miller not to close three wells installed at the site as those can be used as part of ongoing investigation/remediation project at 50 Thayer Street. Mr. Miller agreed to leave three wells in-place. discussed with DEC Urda and OAG Thomas Schrempf regarding use of three wells at 52 Arden Street for ongoing investigation/remediation for spill 9514651 at 50 Thayer Street (PIN #: 94970). 11:59 AM:- sent spill closure letter to Mr. Miller. letter emailed to Mr. Miller and Nick, including: As discussed and agreed upon, the Department will use three existing monitoring wells at 52 Arden Street as part of the ongoing investigation/remediation of petroleum contamination at 50 Thayer Street (spill #: 9514651). The wells will be monitored, sampled, maintained and closed as part of spill # 9514651. case closed."

DEC Memo: "03/04/13-Hiralkumar Patel. alternate address: none no other spills found. PBS #: 2-363332. as per PBS record, building has one active 3,000 gal #4 oil AST in contact with soil. the tank was installed in Apr. 1984. Juan Portorreal **super for building 47 Arden St** Ph. (917) 348-6306 47 Arden LLC. **owner for building 47 Arden St** c/o Weiss Realty LLC. 1775 Broadway, Suite 532 New York, NY 10019 Attn.: Ken Yustman Ph. (718) 892-9200 email: kyustman@weissrealtyllc.com visited site on 02/21/13 (at 9:30 AM) as part of investigation under spill #: 9514651 for 50 Thayer St. met with Juan, building super, who is working at the building for past 29 years. he mentioned that building was using #6 oil, but changed grade to #4 oil just when he started working at the building. the tank at 47 Arden St is completely aboveground on saddles. all lines to/from tank are aboveground, except portion of fill line that runs about 12 ft under the sidewalk. no oil found in sump in boiler room. tank/boiler room at 47 Arden street are located along the Arden St. as portion of fill line was underground, asked Mr. Yustman to test it, which failed. Mr. Yustman also manages property 42 Thayer Street, which is located on east of the subject site. fill line at 42 Thayer St was also found leaking (spill #: 1216055). both buildings 42 Thayer St and 47 Arden Street were owned by JH Associates in past and were sold to different entities, but all three companies (JH Associates, 42 Thayer LLC and 47 Arden LLC) have same address. <----- 03/06/13-Hiralkumar Patel. 9:25 AM:- spoke with Mr. Yustman. based on line test failure, asked him to investigate the leak point and any associated contamination. he already spoke with Riteway to remove and replace the leaking fill line. asked him to schedule for site inspection prior to backfilling the sidewalk excavation. 9:29 AM:- spoke with Rob at Riteway. they are preparing work proposal and will submit to property manager soon. asked him to call for site inspection, prior to backfilling. 10:54 AM:- sent letter to Mr. Yustman requiring investigation for line failure. asked him to submit report by the end

DEC Memo: "notes from 02/15/96 to 01/14/13 are on e-docs due to space limitation. prior to Sept. 2004, DEC Tibbe was project manager. then case transferred to DEC Tipple on 03/29/05, to DEC Ketani, to DEC Vought on 08/23/05, to DEC Ketani on 07/25/08, to DEC Vought on 10/31/11 and to me on 01/15/13. 01/15/13-Hiralkumar Patel. after discussing with DEC Austin, case transferred from DEC Vought to DEC Patel. 1/16/12-Vought-Called and spoke to AG Riggi and no ISR received for spill to date and as such costs can only be recovered for last six years and as such an Intermin ISR must be submitted to AG immediately BEFORE use of state contractor services. 01/30/13-Hiralkumar Patel. after discussion with DEC Austin, case transferred from DEC Vought to DEC Patel. Contract Payment Package (EnviroTrac) (11/26/12-12/30/12). Well gauging, EFR event oversight, review and tabulation of EFR data, site map for monthly EFR event and map creation. 02/06/13-Hiralkumar Patel. reviewed available documents.

-***** 1) 1996/07/08: Fuel Oil Discovery in Basement: - report prepared by Lexicon Environmental Associates - oil discovered within the basement of the site - a sample of oil was collected for analysis - during site visit on 02/23/96, Lexicon found fuel oil within a sump which has several inlet pipes - removed total 1,650 gal oil/water mix - a portion of the facility's french drainage system, located in the west corner of the building, was excavated ----- - when the trench was first excavated, only droplets of oil were evident. however, by the next day a 0.25 to 0.5 inch layer of oil was present within the trench ----- - result of fingerprint analysis indicated that the oil most closely matched a weathered #2 fuel oil. however, the analysis was only an approximation due to the poor match of the sample pattern with that of the reference standard. as a result, the sample could also consist of #4 fuel oil or kerosene ----- - the basement floor plan (1963) provided by NYNEX indicated that there are two fuel oil tank storage rooms present at the facility which are used for the boiler and turbine - the tanks consist of one 4,200 gal #2 oil AST for turbine and one 4,600 gal #2 oil AST for boiler - in addition,

- product noted in wells MW-1, MW-4 and MW-9 11) 2004/12/03: fingerprint analysis result: - Miller collected samples of fuel oil from the site and from 75 Thayer Street for comparison - one oil/water sample was collected from a well, located at 50 Thayer St, just prior to VEFR activities - second oil/water sample was collected from an excavation within the basement of 75 Thayer St - samples were analysed for method 8015 (fingerprint) - analyticals results provided by lab indicated that there was a 24% probability the two samples were from the same source - upon review of the chromatograms provided by lab, Miller Env. believes that the identified fuel oil from the sample obtained from the well at 50 Thayer St is less weathered version of the sample obtained from the tank excavation in basement of 75 Thayer St ----- despite the difference in concentrations between the two samples (100% fuel oil for the building and 24% from the well), a comparison between the two chromatograms indicates numerous similarities between the chromatogram peaks and their times ----- further confirmation would require a subsurface investigation to delineate the extent of the plume resulting from the release at 75 Thayer St 12) National Environmental performed monthly VEFR events and fluid-level gauging from Mar. 2005 to July 2008. during this period, product found in in wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-9 and MW-10. wells MW-3, MW-7, MW-8, MW-11 and MW-12 were inaccessible. 13) 2009/05/06: Groundwater Monitoring Report for Jan. 2009: - Envirotrac was contracted in Oct. 2008 - groundwater sample was collected from well MW-10 on 01/15/09 - product found in wells MW-1 through MW-6 and MW-9 - wells MW-7, MW-8, MW-11 and MW-12 were not accessible due to new sidewalk construction - groundwater found between 11.88 and 13.07 ft below top of casing - minor VOCs detected in groundwater sample from well MW-10 (max: 1.8 ppb Naphthalene) 14) 2009/06/05: Groundwater Monitoring Report for Apr. 2009: - groundwater samples were collected from wells MW-2, MW-3, MW-5, MW-6 and MW-9 on 04/30/09 - product found in wells MW-1, MW-4 and MW-9 - the detected free-phase petroleum appears to be #6 fuel oil - wells MW-7, MW-8, MW-11 and MW-12 were not accessible due to new sidewalk construction - groundwater found between 11.88 and 13.07 ft below top of casing - groundwater flows to north-northeast ----- minor VOCs detected in groundwater samples (max: 6.8 ppb Xylene in MW-5) - minor SVOCs detected in groundwater samples (max: 58 ppb Pyrene in MW-2) 15) 2009/10/06: Groundwater Monitoring Report for Jul. 2009: - groundwater samples were collected from wells MW-3, MW-5 and MW-10 on 07/30/09 - product found in wells MW-1, MW-2, MW-4, MW-6 and MW-9 - the detected free-phase petroleum appears to be #6 fuel oil - wells MW-7, MW-8, MW-11 and MW-12 were not accessible due to new sidewalk construction - groundwater found between 11.37 and 12.96 ft below top of casing - groundwater flows to north-northeast less than ----- minor VOCs detected in groundwater samples (max: 81 ppb Naphthalene in MW-10) - SVOCs detected in groundwater samples (max: 170 ppb Phenanthrene in MW-10) 16) 2010/02/02: Groundwater Monitoring Report for Oct. 2009: - groundwater samples were collected from wells MW-1 through MW-7, MW-9 and MW-10 on 10/20/09 - product found in wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-9 and MW-10 - the detected free-phase petroleum appears to be #6 fuel oil - wells MW-8, MW-11 and MW-12 were not accessible due to new sidewalk construction - groundwater found between 9.82 and 18.42 ft below top of casing - groundwater flows to north-northeast less than ----- minor VOCs detected in groundwater samples (max: 84 ppb Naphthalene in

spills at 75 Thayer St: 9914701, 0406853 spill # 9914701 was reported on 03/28/2000 as #6 oil spill due to broken oil line in boiler room. case closed and referred to spill # 0406853. spill # 0406853 was reported on 09/21/2004 as tank let go and oil showed up in basement. as per remarks, the tank was located on floor with approx. 10% below ground. there was no oil noticed around tank, but oil showed up in adjacent boiler room which is 3 ft lower than the tank room. 75 Thayer LLC. **owner of 75 Thayer St** 98 Cuttermill Road Great Neck, NY 11021

*****_-----*****

***** based on available documents: - wells MW-1, MW-2 and MW-3 were installed sometime before Aug. 1997 - wells MW-1 and MW-2 were installed in straight line along north side of the verizon building (on south sidewalk of Sherman Ave) and well MW-3 was installed within the verizon building in southwest corner of the building - wells MW-4, MW-5 and MW-6 were installed 10/29/1997, in straight line of MW-1 and MW-2, along north side of the verizon building - wells MW-7, MW-8, MW-9 and MW-10 were installed between April and May of 1998 - wells MW-9 and MW-10 were also installed in straight line of MW-1/2/4/5/6 - well MW-7 was installed in northeast corner of the intersection of Arden St and Sherman Ave - well MW-8 was installed in northwest corner of the intersection of Arden St and Sherman Ave - wells MW-11 and MW-12 were installed between Sep. and Oct. 1998. also, as per lab result from Pedneault Associates dated 10/21/1998, groundwater samples were collected from wells MW-11 and MW-12 on 10/16/98 and no contamination was found. - well MW-11 and MW-12 were installed in straight line of MW-8, on west sidewalk of Arden Street, along eastern line of property 40 Sherman Ave - as per text of the report, groundwater flows to north-northeast, but as per maps in report, groundwater flows to southeast - based on stated groundwater flow direction to north-northeast, the wells MW-7, MW-8, MW-11 and MW-12 are located crossgradient (and not upgradient), in northwest direction, from the Verizon facility - as per letter dated 12/18/08, job was contracted to Envirotrac - as per report from Envirotrac dated 05/06/09, wells MW-7, MW-8, MW-11 and MW-12 were not accessible due to new sidewalk construction - based on stated groundwater flow direction to north-northeast, property 75 Thayer Street is located downgradient from the Verizon facility
02/07/13-Hiralkumar Patel. 1:26 PM:- spoke with Dave Lothior at Envirotrac. asked him to submit report for work done after July 2010. also asked him to hold on to monitoring/VEFRing events. 2:05 PM:- received email from Dave. he confirmed that all field activities will be stopped. he will submit report for work done since 2010. he asked to increase budget amount as total expense is over the previous budget. 2:40 PM:- visited site. no-one inside the Verizon building. found monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-7, MW-9 and MW-10. as building was closed, could not confirm location of well MW-3. wells MW-8, MW-11 and MW-12 were probably destroyed during sidewalk work. during inspection, found two fire hose connections on building walls: one on building's northern foundation wall (in line with well MW-4) and second on building's eastern foundation wall. also, found circular concrete patch at sidewalk curb along the eastern side of the building, little north from the fire hose connection. another circular patch with metal plate found at sidewalk curb along northern side of the building, almost in line with fire hose connection. the western portion of the site, along Arden St, is an open vacant lot. during site visit, noted fill port/vent pipe at

(Verizon). inspected basement of verizon building. Tom showed sump in boiler room where product found initially. clear water noted in sump. the sump is located more than 30 ft away from northern foundation wall of the verizon building. there is a cable vault between the northern foundation wall along Sherman Ave and sump in boiler room. no major impact noted in cable vault, except area near outside well MW-1 where some black stains found on vault floor. Tom mentioned that the black material could be water proofing material. also found cable penetrating foundation wall in area close to outside well MW-1. no sign of oil seepage found through cable penetration in wall. asked Tom to provide details about foundation depth, water proofing project and cable conduit that leaves the northwest corner of the building (area between outside wells MW-1 and MW-2). inspected entire basement along the foundation wall area. there is a vault under the sidewalk along Thayer St. the active fill line cross the sidewalk into this vault and then fill line runs aboveground. the concrete patch along the Thayer St curb line was probably the old fill port, but it is also above the sidewalk vault area. no sign of oil seepage found through southern foundation wall, towards buildings 42 Thayer St/47 Arden St. there is open parking lot in northwestern corner of the property and southern side of the site (between the verizon building and 42 Thayer St/47 Arden St properties). discussed about circular patch with metal plate along Sherman Ave side, in line with well MW-4 and fire hose connection. Tom mentioned that it could be water main valve. the verizon building basement is approx. 12 ft bg. during site visit, all wells were gauged. groundwater found between 10 and 12.7 ft bg. during well gauging, product found in wells MW-1, MW-4 and MW-9. no product found in wells MW-2, MW-3, MW-5, MW-6, MW-7 and MW-10. collected water samples from wells where no product detected, except well MW-5 where not enough water found. found sewer smell in groundwater from wells where no product found. less than ----- during site inspection, discussed with Tom about further investigation needed on south and west side of verizon building. due to vault under the sidewalk along east side of building (along Thayer St), no need for investigation in that direction. during inspection, both Verizon and EnviroTrac requested copy all available documents related to this project. 3:45 PM:- revisited area to inspect additional possible sources. based on available data to date and site location, other possible sources for petroleum product on south side of Sherman Ave are: 1. 65 Arden St 2. 60 Thayer St 3. 68 Thayer St 4. 75 Sherman Ave

S102151015

02/22/13-Hiralkumar Patel. 10:10 AM:- received email from Melissa Haas from Test America requesting updated callout. Melissa Haas Test America 128 Long Hill Cross Road Shelton, CT 06484 Ph. (203) 929-8140 (203) 944-1310 email: Melissa.Haas@testamericainc.com 10:30 AM:- spoke with Ms. Haas. she mentioned that they need new authorization form as contract number has changed. she asked about turnaround time and deliverables. asked her to analyze samples for STARs 8260/8270. asked her for standard 30 day turnaround time (samples will be analyzed with its holding time) and submit deliverable A. 12:41 PM:- sent email to Ms. Haas with contractor authorization form.

02/26/13-Hiralkumar Patel. 11:41 AM:- spoke with Tom regarding his request for older documents. as this is state funded work, asked Tom to submit FOIL application. 11:48 AM:- spoke with Mr. Yustman, manager for properties 42 Thayer ST and 47 Arden St. based on observations during site visit, asked him to test fill lines at both buildings. he mentioned that after receiving NOV on 02/14/13, he contacted Riteway to perform line test. asked him to submit copy of test results. 12:27 PM:- sent email to Mr. Yutsman and asked to submit result of fill line tightness test, at 42 Thayer St and 47 Arden ST, by the end of 03/05/13. email copied to Anthony at Riteway. 12:30 PM:- spoke with Ms. Santana and informed her that the department requires tightness testing of the fill line at 52 Arden St. asked her to submit test result by the end of 03/05/13. 12:32 PM:- sent email to Ms. Santana with fill line test requirement. 12:38 PM:- spoke with Ms. Quinonen at Edel Family Management, property manager for building 60 Thayer St. informed her about spill investigation. as she was busy, she will call back tomorrow. 1:00 PM:- spoke with Brian Shalit, property manager for 68 Thayer St. informed him about incorrect product type in PBS registration for 3,500 gal tank and expired registration for 5,000 gal diesel tank. Mr. Shalit mentioned that he will submit PBS application to correct product type in PBS #: 2-403083 (from #6 to #4 oil). he mentioned that their company (Miriam L LLC) purchased the property in Mar. 2001 and he has no knowledge of tank change in 1999/2000. he mentioned that there are no other tanks at the site and the 5,000 gal diesel tank listed under PBS #: 2-603930 could be the old 5,000 gal #6 oil tank, which was removed by previous owner. asked him to submit PBS application to correct information regarding 5,000 gal tank. informed Mr. Shalit about ongoing spill investigation. as 3,500 gal heating oil tank and portion of its fill line are not visible, asked Mr. Shalit to perform tightness test of the heating oil tank and fill line. asked him to submit tightness test result by the end of 03/05/13. 1:21 PM:- sent email to Mr. Shalit with copy of both PBS registration application. also asked him to submit result of tightness test of the heating oil tank and its fill line, by the end of 03/05/13. 1:27 PM:- left message for Mr. Kaplan, property manager for building 65 Arden ST. 3:25 PM:- received call from Mr. Kaplan. asked him about tank position. he will check and will call back with tank location: whether tank bottom touching floor or tank completely aboveground. informed him that if tank is sitting on floor, the department requires tank only test. he will send information. 3:29 PM:- sent email to Mr. Kaplan. asked him to provide information about tank position. 3:38 PM:- received email from Mr. Kaplan. he mentioned that tank at 65 Arden St is on rack and not sitting on the floor. reviewed previous project manager's notes. DEC Ketani spoke with Walter Berninger (631) 589-6521 regarding the site. Mr. Berninger said that his company installed about 12 wells using air rotary.

VERIZON (Continued)

S102151015

that's why there are no boring logs. the wells were all in bedrock.
===== 02/27/13-Hiralkumar Patel. 3:33 PM:- left message for Ms. Quinonen at 60 Thayer St. 02/28/13-Hiralkumar Patel. 3:25 PM:- received call from Tom. he mentioned that they will discuss with their legal team about investigation around facility done by Verizon. 3:39 PM:- left message for Marcia at 60 Thayer St. 03/01/13-Hiralkumar Patel. 11:01 AM:- received message from Ms. Quinonen. 11:29 AM:- spoke with Ms. Quinonen. informed her about ongoing spill investigation. based on tank location at 60 Thayer St, informed her that the department requires tightness testing of the tank system. 11:55 AM:- sent email to Ms. Quinonen requiring tank system tightness test. informed her that the test result must be submitted by the end of 03/11/13. 3:10 PM:- received call from Mr. Shalit from 68 Thayer St. he mentioned that tightness test was conducted today and will submit result next week. he inquired about PBS application. asked him to contact DEC Falvey. 03/04/13-Hiralkumar Patel. Rob Hill from Riteway Tank reported line test failure for 42 Thayer St (1216055) and 47 Arden St (1216056). sent letters to Mr. Yustman requiring further investigation for line failure. 03/12/13-Hiralkumar Patel. received message from Tom (at 1:02 PM on 03/11/13). he has discussed with their legal counsel who asked to get copies of available documents for review prior to any work by Verizon. Tom will submit FOIL application. he has also contacted their real estate team to get copies of building drawings. after reviewing building drawings and spill documents, he will call back. 11:21 AM:- spoke with Mr. Shalit regarding tank test result. he mentioned that NYC Tank Testing performed the test. asked him to submit result by end of today. 11:24 AM:- sent email to Ms. Quinonen and asked to submit tank test result. 11:26 AM:- spoke with Ms. Santana. she mentioned that due to ongoing boiler replacement project, fill line test was delayed. but they have scheduled line test on 03/18/13 and result will be submitted by the end of 03/18/13. 03/15/13-Hiralkumar Patel. received message from Mr. Shalit (at 1:52 PM on 03/13/13). 10:25 AM:- left message for Mr. Shalit. 10:26 AM:- spoke with Ms. Quinonen. she mentioned that tank test will be performed by end of next week. received email from Jennifer Capece (jennifer.capece@testamericainc.com) from TestAmerica including water sample results. groundwater sample from wells MW-2, MW-3, MW-6, MW-7 and MW-10 were analyzed for VOCs and SVOCs. no contamination found in samples. 03/19/13-Hiralkumar Patel. 11:26 AM:- received call from Ms. Quinonen. she mentioned that tank system at 60 Thayer St was tested this morning and it passed. Ms. Quinonen will send result for review. 11:28 AM:- received email from Ms. Quinonen including copy of invoice from PTC stating tank test passed. 11:32 AM:- sent email to Ms. Quinonen and asked to submit test result for review. 03/27/13-Hiralkumar Patel. approved Contract Payment Package (EnviroTrac) (02/01/13-02/24/13). scheduling of EFR event, preparation/submission of report, site inspection and well monitoring/sampling. 03/28/13-Hiralkumar Patel. 12:00 PM:- received message from Tom. he mentioned that real estate group has checked their database and were unable to find building construction drawings. they will look into archived material which may take couple of weeks. 03/29/13-Hiralkumar Patel. 3:11 PM:- spoke with Mr. Shalit regarding tightness test result. he will contact NYC Tank Testing and will submit result on 04/03/13 (testing company is closed during religious holidays). 3:15 PM:- spoke with Ms. Quinonen regarding test result. she will submit on 04/01/13. 3:16 PM:- spoke

S102151015

with Ms. Santana. she is currently out of office and will return on 04/01/13. 04/01/13-Hiralkumar Patel. received fax from Ms. Quinonen including result of tank system test. the tank system at 60 Thayer St was tested tight on 03/19/13. 04/09/13-Hiralkumar Patel. 11:40 AM:- received email from Gavin from Envirotrac requesting copy of available documents for review prior to making any conclusions or recommendations in future reports. 04/16/13-Hiralkumar Patel. approved Contract Payment Package from TestAmerica (02/21/13-03/31/13), for analysis of groundwater samples. 1:48 PM:- left message for Mr. Shalit. 2:18 PM:- sent available letters/reports/workplan to Gavin and Dave using DEC file transfer service. 04/18/13-Hiralkumar Patel. 3:35 PM:- received email from Mr. Shalit including result of tank tightness test. NYC Tank Testing performed tank system test on 04/16/13 and system was found tight. as per Mr. Shalit, tank test was performed on 03/01/13, but report showed that test was done on 04/16/13. 4:01 PM:- spoke with Mr. Shalit about tank test date. he mentioned that tank system test was not done on 03/01/13, but was performed on 04/16/13. 04/26/13-Hiralkumar Patel. 9:42 AM:- received call from Chris from All Boro testing. All Boro did tank only isolation test during boiler conversion and it passed. now, management asked for fill line test, but fill line enters into tank through manhole. Chris mentioned that to test fill line, they have to empty the tank. he is waiting for response from management. discussed about testing underground portion only of the fill line. Chris mentioned that it is possible by cutting aboveground portion of fill line in the tank room and then close it with union. 9:55 AM:- left message for Ms. Santana. informed her that fill line test result must be submitted by the end of 04/30/13. 05/03/13-Hiralkumar Patel. approved Contract Payment Package from Envirotrac (02/25/13-03/31/13), for review and tabulation of lab data. 08/07/13-Hiralkumar Patel. 11:15 AM:- left message for Tom at Verizon. 08/23/13-Hiralkumar Patel. 11:01 AM:- received call from Tom. he just came back from vacation. he will follow up on building drawings. Tom asked for written request to see building drawings. 10/02/13-Hiralkumar Patel. approved invoice # DC2019.01-50 from EnviroTrac: review of work plan prepared by 52 Arden St. 1:28 PM:- left message for Tom inquiring about building drawings. 10/04/13-Hiralkumar Patel. received message from Tom (at 11:05 AM on 10/03/13). 11/21/13-Vought-Site visit by Vought while wells being installed at 52 Arden Street as part of investigation of fill line contamination. Onsite was EnviroTrac (Lorthior), EEA and Allied Drilling. Three monitoring wells were installed (one on Arden Street adjacent to 52 Arden, one on southwest corner of intersection of Arden and Sherman Avenue and one well at former fill line of 52 Arden Avenue). Initial field observations showed a few drops of oil on water in well on Arden adjacent to 52 Arden Avenue and also showed some sheen on water at boring at fill line. No heavy oil, olfactory signs of oil or PID readings noted in soil samples at fill line however some grey discolored soil noted. Vought noted that due to lack of field evidence of contamination at fill line that only one well was needed at this location and second boring at fill line as proposed in the Work Plan was no longer required. A total of seven soils samples will be submitted for analysis (and at location of fill line, samples for analysis will be the two deepest dry samples). Vought spoke with EnviroTrac Lorthior who noted that wells across Sherman Avenue had not been gauged in a long time and Vought required that all wells (onsite and off-site be gauged in two weeks as agreed upon with EEA).

S102151015

01/06/14-Hiralkumar Patel. 4:18 PM:- sent email to Dave including standby contractor authorization form. 01/07/14-Hiralkumar Patel. 12:36 PM:- received email from Maegen Pane (maegen.pane@testamericainc.com) from TestAmerica including result of soil fingerprint analysis. 01/09/14-Hiralkumar Patel. 11:52 AM:- received email from Janet Mosley (janet.mosley@testamericainc.com) from TestAmerica including results of groundwater samples. 01/27/14-Hiralkumar Patel. 9:47 AM:- received email from Dave including status report. abstract: - on 12/11/13, gauged all twelve (12) wells: MW-1 through MW-7, MW-9, MW-10 at 50 Thayer; GEI-1 through GEI-3 at 52 Arden - product found in wells MW-1, MW-2, MW-5, MW-6 and MW-9 - groundwater samples were collected from wells MW-3, MW-4, MW-7, MW-10, GEI-1, GEI-2 and GEI-3 - water sample was also collected from sump in the basement of 50 Thayer St - on 12/18/13, surveyed all 12 wells - groundwater flows to the east
----- on 12/18/13, free phase product found in wells MW-1 (0.16 ft), MW-2 (0.09 ft), MW-4 (0.01 ft), MW-6 (0.07 ft), MW-9 (0.28 ft) and MW-10 (0.01 ft) - on 12/11/13, a product sample was collected from sump (in cable vault room) which is adjacent to the building foundation near the southwest corner of 50 Thayer - due to an inadequate quantity of oil, no fingerprint analysis could be performed on the liquid product sample from sump in cable vault room
----- a soil/sludge sample was collected on 12/18/13 in a stained area along the west interior basement wall (in cable vault room) - fingerprint analysis of soil/sludge sample from cable vault room wall shows presence of petroleum product which closely resembles degraded #4 fuel oil ----- no VOC contamination noted in groundwater samples - minor SVOC contamination found in some groundwater samples previously received results from TestAmerica are included in report from EnviroTrac. discussed with DEC Austin and DEC Vought. based on available information, need to discuss with AG's office prior to any further field work. 02/04/14-Hiralkumar Patel. approved invoice # DC2019.01-53 from EnviroTrac: project management, site visits, sampling and survey of existing wells, data review. 02/12/14-Hiralkumar Patel. approved invoice # 46213171M from TestAmerica for analysis of groundwater samples and product sample. 03/07/14-Hiralkumar Patel. 11:04 AM:- received email from Thomas Schrempf from NYSOAG. 11:08 AM:- spoke with Tom at NYSOAG. he has been assigned to this case. informed him about case history and current status. he requested copy of case file. 03/10/14-Hiralkumar Patel. approved invoice # DC2019.01-54 from EnviroTrac for project coordination and report preparation and submission. 03/11/14-Hiralkumar Patel. after discussing with DEC Austin and DEC legal, all available documents were sent to Tom at NYSOAG using the Department's file transfer service. 04/01/14-Hiralkumar Patel. approved invoice # DC2019.01-55 from EnviroTrac for project coordination and management. 05/20/14-Hiralkumar Patel. monitoring well MW-3 is located in an open lot along Arden Street, and not inside the building as thought earlier. 06/13/14-Hiralkumar Patel. 12:59 PM:- sent letter to Tom (Verizon) requiring Phase I and GPR survey at verizon site. asked him to submit reports by the end of 09/05/14. letter emailed to Tom and Dave (EnviroTrac). letter copied to NYSOAG. 06/27/14-Hiralkumar Patel. reviewed NYC DEP boiler information and found a document (application #: CA390163) showing use of #4 oil at 50 Thayer Street. 12:46 PM:- spoke with Tom at Verizon and informed him about DEP boiler document confirming use of #4 oil at the site. Tom requested

S102151015

copy of that. Tom also mentined that they have hired ARCADIS for required Phase I and GPR survey and field work will happen probably in mid of July 2014. 12:52 PM:- sent email to Tom at NYS OAG with copy of NYCDEP boiler document. 1:34 PM:- left message for Angel at NYC DEP. Angel NYC DEP Boiler Unit Ph. (718) 535-4075 2:10 PM:- sent email to Tom at Verizon including DEP boiler record. also sent copy of remarks from various reports confirming presence of product similar to #4 oil in existing wells at the site. 06/30/14-Hiralkumar Patel. 11:42 AM:- spoke with Angel at NYC DEP. they don't have any document older than 1984. he mentioned that the boiler information document dated 08/19/1984 confirms use of #4 oil boiler at the site in past. 08/19/14-Hiralkumar Patel. received email from Tom (at 8:16 AM on 07/09/14). he mentioned that Phase I and GPR was scheduled on 07/15/14. 09/04/14-Hiralkumar Patel. 2:55 PM:- sent email to Tom reminding that Phase I and GPR reports are due tomorrow. 10/10/14-Hiralkumar Patel. received environmental assessment report and geophysical survey report from Tom. abstract of environmental assessment report: - subject site is developed with a 3-story brick and mortar building, with basement, constructed in 1926 by the New York Telephone Company for use as a customer communications exchange center - building currently and historically housed telephone communications equipment and ancillary facilities - building was historically heated by low-pressure steam boilers - heating fuel was originally coal and was converted to #4 oil (prior to 1940) and later #2 oil (prior 1985) - Jan 1926 drawing 393-B1 depicts basement coal vault, ash storage and coal holes above ----- from 1939 to 1963, fuel oil type was not specified. they presumed #4 oil ----- - 1940 General Construction Work & Piping Arrangement Plan for installation of 1,500 gal diesel storage tank at basement depicts Existing Fuel Oil Tank (permit no. 316540 with expiration 10-27-1941) which corresponds to current 4,600 gal fuel oil tank at basement ----- abstract of geophysical survey report: - geophysical survey was conducted using three methods: time domain electromagnetic induction (EM61), ground penetrating radar (GPR), and precision utility location (PUL) - with EM61, one anomaly is located along Sherman Ave and one anomaly is located in the narrow alley at the south end of the site. the features causing EM anomalies could not be identified with the GPR method - GPR records do not exhibit reflections typical for a UST - piping between a UST (actually AST) fill port near the curb on Thayer St and a known UST (actually AST) in the building basement was not detected ----- - communication lines that must be present for the Verizon facility were not detected and must be located at a depth below the GPR signal penetration ----- - sewer and drain lines were not detected ----- - gas service, if present, was not detected ----- as per assessment report, fuel oil type was not specified on documents from 1939 to 1963. fuel type for this period was presumed #4 oil, which may be #6 oil. the assessment report is missing historical drawings/plans. also, during geophysical survey, fill line for existing AST, communication lines, and sewer and drain pipes were not detected. 10/14/14-Hiralkumar Patel. 9:19 AM:- sent email to Tom and asked him to submit all drawings/plans mentioned in the site assessment report. 11:34 AM:- received missing drawings/plans/permit copies from Tom. 12:20 PM:- send email to Dave at EnviroTrac including copy of site assessment/geophysical survey reports for review and comment. 11/04/14-Hiralkumar Patel. 2:59 PM:- received email from Dave. after reviewing report, Dave feels that

Verizon's previous statements of no USTs at the site are justified. he also mentioned that based on the records, building used #4 oil from about 1940 to about 1985. Dave suggested to collect product sample from wells and have it age dated. 12/01/14-Hiralkumar Patel. 1:49 PM:- spoke with NYSOAG Tom. informed him about GPR and Phase I reports from Verizon and EnviroTrac's comments/suggestion on these reports. Tom asked for copy of reports. 2:21 PM:- sent email to Tom at AG's office, including copy of Phase I/GPR report from Verizon. discussed with DEC Austin about collection of product samples for age analysis. he agreed to it as results will indicate whether a historical release or an active leak from somewhere. he asked to discuss with DEC DeMeo. 12/09/14-Hiralkumar Patel. discussed with DEC DeMeo and DEC Austin regarding further investigation on sidewalk along the verizon building to locate any source under the sidewalk. based on available information, they both agreed to conduct further delineation using geoprobe along southern sidewalk of Sherman Ave and in northeast corner of the intersection of Sherman Ave and Thayer Street. 1:46 PM:- spoke with Dave and asked him to schedule installation of soil borings along Sherman Ave sidewalk and in northeast corner of the intersection of Sherman Ave and Thayer Street. 01/12/15-Hiralkumar Patel. approved EnviroTrac invoice # DC2019.01-56 for reviewing Verizon's GPR and Phase I reports. **need to review Verizon building's construction drawings prior to any field work. **wells in bedrock. no well logs available. **no dissolved contamination in groundwater.**"

Remarks: "FUEL OIL FOUND IN SUMP HOLE. POSSIBLE FROM A FUEL OIL TANK ON ADJACENT PROPERTY. FURTHER INVESTIGATION TO FOLLOW. SPOKE TO MARK TIBBE IN REGION 2."

FINDS:

Registry ID: 110004548188

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110044959532

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "DEC Piper spoke with Mark at PTC. 5K vaulted ust with debris around it is leaking .Managing agent has proposal to pump and remove tank and cont. CSL sent. PBS # 2- 091480. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A. 10/14/10 - Raphael Ketani. The spill took place on 3/30/10 and consisted of a release of 20 gals. of #6 oil to the soil. It is an equipment failure, but the type of failure is not indicated. The owner is Inwood Ventura Associates, LLC, 149-45 Northern Blvd., apt 6V, Flushing, NY, 11354. The PBS case is #2-091480. It lists a 5,000 gal. tank in a vault with #6 oil that is in service. The contact is Steven Lavelle (718) 463-0470, ext 16. There is no paper file and there is only a CSL in the E-docs. I tried to contact Mr. Lavelle regarding the status of the cleanup, but I could only leave a voice message. 12/6/10 - Raphael Ketani. I spoke to Mr. Lavelle. He said that PTC finished putting in the replacement oil tank just 2 weeks ago. He said that the problem has been going on since March and now it's December. He said that he will have his assistant look for the closure report and send it to the DEC. 12/9/10 - Raphael Ketani. Mr. Lavelle sent me three invoices from PTC showing that Inwood Ventura Associates had been billed for the cleanup work. Two invoices listed the specific work and materials used in the cleanup. 1/11/10 - Raphael Ketani. Mark Salamack of PTC (718) 624-4842 sent me a letter report explaining the work that took place. The letter was accompanied by a disposal manifest, a hand drawn diagram, and pictures of the cleaned tank room floor. I reviewed the documents and determined that they accurately reflected the work that took place and that the spill had been cleaned up. As the spill was small and contained to the tank room, and as the oil was thick #6 oil that had spilled onto a concrete floor with no cracks, I determined that the threat to the public and the environment were minimal to non-existent. Therefore, I closed the spill case. "
Remarks: "not contained,caller is trying to get approval to empty the tank. clean up pending"

Tank Info:

Tank Number: 001
Tank Id: 20022
Material Code: 0002
Common Name of Substance: #4 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 07/01/1953
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was GRATHWOL Joe Ksturski - 1540. Ordered 3000 gallons - could not find super - found woman - this woman signed for delivery. 4/11/88 @ 1530. Talked to owner of building - Topk Realty. New line, 3 feet above old line. call office. broke old fill without checking first. Said they will document their side of the story. Sent out Grathwol to investigate. Petroleum Tank Cleaners - Anthony on scene. Belcher oil delivery was put in the wrong fill pipie. Invoice quoted 3000 gallons was delivered. Spill approximately 350 gallons. Fill pipe had been sealed with concrete and covered with epoxy. Driver hurried and left site. Two hours later, spill was discovered in basement. 5k tank. Brick vault. 200 gallons vacced out. Speedi dri dropped, cleaned, dropped and cleaned again. Recommended no electricity for ththe basement and to keep boiler out of operation until 4/12/88. PTC concreted bad fill pipe at both ends."
Remarks: "DRIVER USED OLD FILL LINE WITH LEAK IN IT, PRESENT SPILLAGE IS CONTAINED IN BOILER ROOM."

Cleanup Meets Std: Last Inspection: Recommended Penalty: UST Trust: Remediation Phase: Date Entered In Computer: Spill Record Last Update: Spiller Name: Spiller Company: Spiller Address: Spiller Company: Contact Name: DEC Memo:	False Not reported False False 0 2004-09-21 2012-01-23 ROBERT WISGO MGMT CONTACT APARTMENT 75 THAYER STREET 001 JOE <p>"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 9/21/04 Sangesland spoke to Mark Salamack of PTC. He says the existing tank is laying on the basement floor approx 10% below ground on bottom spine of tank. No spill seen around tank. Problem is in adjacent boiler room which is 3 ft lower than the tank room. Oil is coming through the wall and onto the floor around the boiler. Oil is in the sump pit being pumped out to sewer. Mark at PTC disconnected sump pump Property Manager is Athea - 516-315-8072 Tipple responded to the site and confirmed there is a major problem and the tank must be drained immediately. 9/27/04 closed spill # 99-14701 and referred to this spill #. Eastman currently on site cleaning and preparing to remove the 4000 gal. tank. Action Remediation set up a 275 gal. tank as a recovery tank for oil pumped from sump pit. Sump currently has a steady flow of running oil entering it. Robert Wisco-is the contact person Office-516-487-6790 Cell-516-369-7095 11/22/04 Three wells installed. Two of the wells have been utilized as recovery wells, the up gradient well has always been clean. Currently there is a sheen in two recovery wells. 8/25/05 - Austin - Reassigned from Tipple to Rahman 10.13.05 SR// I rec'd a call from Kevin o'Connor, Action Environmental (516)781-3000, saying the biweekly groundwater monitoring data shows no free product(#6 oil). The tank room was dug out and contaminated soil was removed and no end point sample was taken. I suggested to take at least one ground water sample from #3,#1 wells and soil samples from boiler room and wells as well. 12/16/05- Sharif// Case was transferred from Rahman to Koon Tang for reassignment. 12/19/05: Case reassigned to Andersen. Sent letter requiring gw samples to be taken from mw 1 and 3. Results due back 2/13/06. 1/19/06: Reviewed a fax with the location of a fourth monitoring well. Product was found in MW3 on 1/12/06, after no product was found earlier. 1/23/06: Site visit with NYSDEC Andersen and Kevin O'Conner of Action Environmental. Investigation of the four wells revealed that product was present in wells 1 and 3. A new AST was installed in the tank room about a year ago. It is a 4000 gallon tank and has a concrete secondary containment enclosure. Kevin mentioned that during excavation they found that the soil was clayey. We decided that another well is required downgradient of MW 3, that groundwater samples from all wells would be analyzed through EPA methods 8260 and 8270, and that he would continue hand-bailing the product from the wells with a sheen because there is not enough product present to use a skimmer. 2/10/06: reviewed water sampling data, minimal contamination, continue bailing. 5/10/06: Left phone message with Kevin O'Conner for update on bailing. Spoke with Kevin O'Connor. There is still oil present at about the same level: a little more than a sheen. Bailing with absorbent pads will continue. Report with water levels will be sent. 5/11/06: Received monitoring</p>

info. 0.25' product in MW3 in March, April, and May. Absorbent pads are changed monthly in MW3. 7/12/06: Received monitoring and gauging info for June and July 2006. Sheen present in MW 1 and MW3. Absorbent pads were changed. 10/19/06: Received August - October monitoring data. No product in August or October, sheen in MW's 1 and 3 in September. October 17 sampling noted that wells 1, 2, and 4 had oil in absorbent pads. Monthly gauging and recovery will continue. 3/27/07: Left voice message for Kevin O'Connor to followup on quarterly report. 3/28/07: Received monitoring report. 0.25' product in MW3. No product in other wells. Monthly recovery with absorbent pads will continue. 7/30/07: Left voice message for Kevin O'Connor to followup on groundwater sampling and reporting. 7/31/07: Spoke to Kevin O'Connor. Update report will be submitted tomorrow. Product is still present in one well, and pads have been changed every 3 days. 8/1/07: Received monitoring report. Wells sampled on 5/23 and 7/31/07. 1/4 product in well 3. Oil absorbent pads are being changed 2-3 times a week. 3/19/08: Spoke to Kevin O'Connor. Update report will be sent. Suggested use of Biosolve and recovery in MW3. 3/26/08: Reviewed bailing and monitoring data. A sheen is still present in MW3. Absorbent pads are changed weekly. 2/4/09 - Carlson: Performed site visit with DEC Tibbe, Kevin O'Connor from Action Remediation, and a person from the management company. The NYSDEC requested two sidewalk wells. A workplan will be submitted. 8/27/09 - Carlson: Reviewed work plan. Issued email requiring a revision: move eastern well location 20 ft closer to mw3. Also work plan should include well installation procedures. (Kevin O'Connor: hazmat3010@aol.com). 9/3/09 - Carlson: Approved revised work plan for installation of two sidewalk wells. RIR due 12/3/09. 11/18/09 - Carlson: Received well installation sampling and update report. Two new wells are clean. A sheen is still present in MW 1 and 3. 1/13/10 - Carlson: Received December 2009 monitoring data. Sheen present in MW1. 2/2/2010 - Carlson: Phone conversation with Kevin O'Connor. Groundwater samples will be collected. 7/23/2010 - Carlson: Issued letter requiring RAP by 8/23/2010. 9/22/2010 - Carlson: Reviewed RAP for P&T system. Sent email - implementation schedule required. 1/24/11 - Breen: Received Pilot test report for recovery system. Three wells found to be too shallow. Consultant (Paul Stewart at ACT) wants to deepen them and repeat test. Approved via e-mail. 07/27/11: This spill case transferred from G. Breen to J. Kolleeny. - JK 08/12/11: Reviewed Product Recovery Status Rpt by Advanced Cleanup Technologies, Inc. (ACT), dated 6/28/11 (in eDocs). Rpt summarizes install'n & operation of free product recovery system at site to address release of no. 6 fuel oil, including efforts to enhance system operation by deepening one of recovery wells. ACT concludes that despite these efforts, system did not recover significant quantities of product, and they note that there is currently no measurable product in any monitoring wells at site. Based on these conditions, ACT recommends spill closure. I sent letter (in eDocs) to Ms. Anne Murphy of Parkoff Management (RP) stating that spill closure cannot be approved at this time, and that DEC requires sampling of wells to evaluate potential dissolved-phase impacts to GW. - JK 01/23/12: Reviewed GW sampling letter rpt by Roux Associates, Inc. dated 1/18/12 (in eDocs), submitted via email by George Tyers: Mr. Kolleeny, Please find attached results of a GW sampling event that was conducted at spill site per your request (by letter dated August 12, 2011). Based on analytical results, Roux Associates, on behalf of Parkoff Management, respectfully requests closure of Spill Case #0406853. Should you have

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
