- Prior to any maintenance activities, contracted maintenance activities, or other activities that may disturb any of the above-described materials or that will penetrate walls, fixed ceilings or suspended ceilings, the PPM will be notified for further instruction.

A record of inspection, more detailed descriptions of materials and locations, and a copy of our O&M Program report are available from The PPM for the building. The PPM and alternate personnel to contact for this building are as follows:

PPM: _____
(Name) (Title)

Building staff: _____

Day time phone: _____

Pager: _____

24-Hour Emergency: _____

If there are any further questions regarding ACM in the building, please feel free to contact the PPM.

Please sign below and return a copy to the PPM for our records.

APPENDIX C

GLOSSARY

Acoustic Plaster Sound absorbing finishing material mill-formulated for application in areas where a reduction in sound reverberation or noise intensity is desired. These materials usually are applied in a minimum thickness of 3/8" (13 mm). The finish material is applied over gypsum plaster, plaster brown coat or other base plaster. The surface material is usually friable and has a rough surface appearance.

Acoustic Tile Tile-shaped blocks of sound absorption material used for ceilings or as wall facing. May be glued to substrate or laid in a rigid grid work.

ACM (ACBM) Asbestos-Containing Material (Asbestos-containing Building Material) Any material containing more than one percent asbestos.

Adequately Wet Adequately Wet means sufficiently mix or penetrate with liquid to prevent the release of particulates. If visible emissions are observed coming from asbestos-containing material, then that material has not been adequately wetted. However, the absence of visible emissions is not sufficient evidence of being adequately wet.

ABERA Asbestos Hazard Emergency Response Act

AIA American Institute of Architects

Air Monitoring The process of measuring the fiber content of a specific volume of air.

Amended Water Water to which a surfactant has been added for use in wetting ACM to control asbestos fibers.

Asbestos Chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos and any of these minerals that has been chemically treated and/or altered.

Asbestos-Containing Waste Material Mill tailings or any waste that contains ematted asbestos and is generated by a source regulated under NESHAP. This term includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. As applied to demolition and renovation operations, this term also includes regulated asbestos-containing waste and materials contaminated with asbestos, including disposable equipment and clothing.

Asbestos debris Pieces of ACM that can be identified by color, texture, or composition, or minus dust. If the dust is determined by an accredited inspector to be ACM.

Asbestos Hazard Emergency Response Act (ABERA) An EPA regulation published in the October 31, 1987 Federal Register covering asbestos-containing materials in schools. ABERA requires local education agencies to identify ACM in their school buildings, develop an asbestos management plan and implement this plan. An O&M program is one potential response action, where appropriate.

Asbestos O&M Work Cleaning, maintenance, repair or renovation work involving asbestos containing materials where the intent of the activity is not to remove asbestos. NESHAP requires that the owner or operator of a demolition or renovation activity conduct a thorough inspection of the affected facility or part of the facility where demolition or renovation will occur.

The Property Program Manager (PPM) A building owner or designated representative who supervises all aspects of the facility asbestos management and control program.

Breathing Zone A hemisphere forward of the worker with a radius of approximately 6' to 9' (150-250 cm).

Bridging encapsulant An encapsulant that forms a discrete layer on the surface of an in situ asbestos matrix.

CFR Code of Federal Regulations.

Clerk-of-the-works A representative of the architect or owner who oversees construction, handles administrative matters, and assures that the construction is in accordance with the contract documents.

Competent Person means, in addition to the definition in 29 CFR 1926.32 (f), one who is capable of identifying existing asbestos hazards in the workplace and selecting the appropriate control strategy for asbestos exposure, who has the authority to take prompt corrective measures to eliminate them, as specified in 29 CFR 1926.33(b); in addition, for Class I and Class II work, one who is specially trained in a training course which meets the criteria of EPA's Model Accreditation Plan (40 CFR part 763) for supervisor, or its equivalent and, for Class III and Class IV work, who is trained in a manner consistent with EPA requirements for training of local education agency maintenance and building staff as set forth at 40 CFR 763.92 (a)(2).

Compliance Instruction (Compliance Directive) Instruction issued by OSHA to establish policies and provide clarifications to ensure uniform enforcement of OSHA standards.

Concrete Suspension or Concrete Spine Ceiling System Presents a monolithic ceiling surface, unobstructed by the cross-matching of exposed grid members. Tiles are typically 12" x 12" (300 x 300 mm) or 12" x 24" (300 x 610 mm) with slots or keys cut into the edges of tiles for the purposes of accepting 1/4" or 3/8" spines to support the tiles.

Confined Space A space that has limited openings for entry and exit, unfavorable natural ventilation and/or a space not designed for continuous worker occupancy. Examples include boilers, furnaces, pits, septic tanks, manholes, silos and utility vaults.

Critical Barrier One or more layers of polyethylene taped in place over openings into a work area. Openings to be covered include doors, windows, diffusers, and any other opening that could allow outside air into a work area.

CSRF Construction Sciences Research Foundation

Decorative Acoustic Finish: Finishing material mill-formulated and spray applied up to about 3/8" (10 mm) thick over gypsum wallboard. Material has a rough surface and is similar in appearance to acoustic plaster but is not designed for sound absorption.

Delamination Separation of one layer from another.

Disposal Bag Properly labeled 6 mil (0.15 mm) thick (or thicker) leak-tight plastic bags used for transporting asbestos waste from work area to disposal site.

Drop Cloth A layer of polyethylene on the floor of a work area to protect the floor below from contamination and to facilitate the clean-up of dust or debris generated during the work.

EJCDC Engineers Joint Contract Documents Committee

EL See Excursion Limit

Encapsulant A material that surrounds or embeds asbestos fibers in an adhesive matrix, to prevent release of fibers.

Enclosure The construction of an air-tight, impervious, permanent barrier around asbestos-containing material to control the release of asbestos fibers into the air.

EPA U.S. Environmental Protection Agency

Excursion Limit (EL) The OSHA term used to define a maximum airborne concentration of asbestos in fibers per cubic centimeter as averaged over a sampling period of thirty minutes.

Fiber Release Any uncontrolled or unintended disturbance of ACM resulting in visible emission.

Fireproofing Material applied to structural elements or systems which provide increased fire resistance, usually serving no structural function. This material is typically applied using spray equipment.

Friable Asbestos (See "Regulated ACM")

Gloving A polyethylene or polyvinyl chloride bag-like enclosure affixed around an asbestos-containing source (such as often, TSI) so that the material may be removed while minimizing release of airborne fibers to the surrounding atmosphere.

HEPA Filter High-Efficiency Particulate Air Filter. Such filters are rated to capture at least 99.97% of all particles 0.3 microns (0.3 mm) in diameter or larger.

HMR Hazardous Material Rules under Dept. of Transportation regulations.

Initial Exposure Assessment Prior to the start of any work that may disturb ACM/PACM, the PSM shall perform an assessment to determine the airborne concentrations of asbestos to which employees may be exposed. This assessment must be based on air monitoring results obtained from breathing zone air samples that are representative of the 8-hour TWA and 30-minute short term exposures of each employee. In addition, this assessment shall include consideration of all observations, information or calculations which indicated employee exposure to asbestos, including any previous monitoring conducted in the workplace, or of the opinions of the employee which indicate the levels of airborne asbestos likely to be encountered on-the-job.

MAP EPA Interim Final Model Accreditation Plan (MAP) for asbestos abatement worker training 40 CFR Part 703, Subpart E, and Appendix C

Medical Surveillance A periodic comprehensive review of a worker's health status. The required elements of an acceptable medical surveillance program are listed in the Occupational Safety and Health Administration standards for asbestos.

Mini-Enclosure An enclosure constructed of polyethylene sheeting used for small scale, short duration asbestos maintenance or renovation work. Mini-enclosures can be small enough to restrict entry to the asbestos work area to one worker. Appendix G to OSHA regulation 29 CFR 1926.52 discusses mini-enclosures and recommends that a change room be constructed contiguous to the mini-enclosure.

Miscellaneous ACM Interior asbestos-containing building material on structural components, structural members or fixtures, such as floor and ceiling tiles; does not include surfacing material or thermal system insulation.

NEA Negative Exposure Assessment

Negative Exposure Assessment A demonstration by the employer which complies with criteria in paragraph (d)(1)(ii) of 29 CFR 1926.1101, that employee exposure during an operation is expected to be consistently below the PELs.

Negative Pressure System A local exhaust system intended to prevent the escape of contaminated air to the surrounding environment. It utilizes HEPA filtration capable of maintaining a pressure differential with a lower pressure inside the Work Area than in any adjacent area. This system recirculates clean air and/or generates a constant flow of air from adjacent areas into the work area.

Negative Pressure Respirator A respirator in which the air pressure inside the respiratory-inlet covering is positive during exhalation in relation to the air pressure of the outside atmosphere and negative during inhalation in relation to the air pressure of the outside atmosphere.

NESHAP National Emission Standard for Hazardous Air Pollutants - EPA Rules under the Clean Air Act (40 CFR Part 61)

NIOSH The National Institute for Occupational Safety and Health, which was established by the Occupational Safety and Health Act of 1970. Primary functions of NIOSH are to conduct research, issue technical information, and certify respirators.

O&M Operations & Maintenance

Operations & Maintenance (O&M) Program a program of work practices to maintain ACM in good condition, ensure clean up of asbestos fibers previously released, and prevent further release by minimizing and controlling ACM disturbance or damage.

Occupied Area An area where personnel are present and are performing their normal activities intended for the area (such as in a typical office area from 8:00 to 5:00 p.m., Monday through Friday).

OSHA Occupational Health & Safety Administration.

PAPR Powered Air Purifying Respirator.

Penetrating Encapsulant An encapsulant that is absorbed by the in situ asbestos matrix without leaving a discrete surface layer.

PELs Permissible Exposure Limits.

Personal Air Samples An air sample taken with a sampling pump directly attached to the worker with the collecting filter and cassette placed in the worker's breathing zone. These samples are required by the OSHA asbestos standards and the EPA Worker Protection Rule.

PCM Phase Contrast Microscopy.

Phase Contrast Microscopy (PCM) A method of analysis using a light microscope, used to find the concentration of asbestos fibers. Does not distinguish among asbestos and other fibers. Used by OSHA to find personal exposures and by EPA to find area levels for AHERA project clearance.

Pleenum Any space to convey air in a building or structure. The space above a suspended ceiling is often used as an air plenum. This term is also used in the work practices to refer to spaces above a ceiling not used to convey air.

PLM Polarized Light Microscopy.

Polarized Light Microscopy (PLM) A method of analysis using a light microscope to find the chemical or mineral types of samples, including the concentration of asbestos in bulk materials. Used by EPA for AHERA and NESHAP and by OSHA to see if asbestos is involved in a project.

Project Representative Architect's representative at the project site who assists in the administration of the construction contract.

Protection Factor The ratio of the ambient concentration of an airborne substance to the concentration of the substance inside the respirator at the breathing zone of the wearer. The protection factor is a measure of the degree of protection provided by a respirator to the wearer.

RCRA Resource Conservation and Recovery Act.

RACM Regulated ACM.

Regulated ACM (RACM) As defined by NESHAP in the November 20, 1990 Federal Register, regulated asbestos-containing material (RACM) means (a) friable asbestos material, (b) Category I nonfriable ACM that has become friable, (c) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or (d) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this subpart.

(Note: Regulated ACM is an EPA NESHAP concept. OSHA makes no distinction between friable and non-friable asbestos.)

"Cutting" means to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing, or planing.

"Grinding" means to reduce powder or small fragments and includes mechanical clipping or drilling.

Friable asbestos material means any material containing more than 1 percent asbestos as determined using the method specified under AHERA (40 CFR Part 703, Sub-part F, Appendix A, section 1, Polarized Light Microscopy) that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. If the asbestos content is less than 11 percent as determined by a method other than point counting by polarized light microscopy (PLM), verify the asbestos content by point counting using PLM.

Category I nonfriable asbestos-containing material (ACM) means asbestos-containing packings, gaskets, resilient floor covering and asphalt roofing products containing more than 1 percent asbestos as determined using the method specified under AHERA.

Category II nonfriable ACM means any material, excluding Category I nonfriable ACM, containing more than 1 percent asbestos as determined using the methods specified under AHERA, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.

Remove For Operations and Maintenance work on ACM, "remove" refers to the removal of ACM as needed to perform a maintenance or repair O & M activity.

Removal Encapsulant A penetrating encapsulant specifically designed to minimize fiber release during removal of asbestos-containing materials rather than for in situ encapsulation.

Repair Returning damaged ACM to an undamaged condition or to an intact state so as to prevent fiber release.

Respirator A device designed to protect the wearer from the inhalation of harmful particulates.

Small-scale, Short-duration Term formerly used by OSHA to describe O&M work activities (in the previous OSHA construction standard). This term has been superseded by the work class definitions in the current OSHA standard.

Surfacing ACM Asbestos-containing material that is sprayed-on, troweled-on or otherwise applied to surfaces, such as acoustical plaster on ceilings and fireproofing materials on structural members or other materials on surfaces for acoustical fireproofing, or other purposes.

Survey An asbestos survey is what EPA calls an inspection in the AHERA regulation. It consists of a visual and tactile inspection of a building to identify, quantify and assess the accessibility and condition of the ACM and suspected ACM present.

Suspended "T" Bar Ceiling System A false or dropped ceiling composed of acoustic tiles laid into an inverted metal "T" bar grid frame suspended by wires from building framing members.

Surfactant A chemical wetting agent added to water to improve penetration, thus reducing the quantity of water required for a given operation or area.

TEM Transmission Electron Microscopy

Temporary Barriers One or more layers of 6 mil polyethylene installed to isolate a work area from other portions of a facility.

Thermal System Insulation (TSI) Thermal system insulation - asbestos-containing material applied to pipes, fittings, boilers, breeching, tanks, ducts or other inerting structural components to prevent heat loss or gain or water condensation.

Time Weighted Average (TWA) In air sampling, this refers to the average air concentration of contaminants during a particular time period.

TSI Thermal System Insulation

Transmission Electron Microscopy (TEM) A method of analysis using an electron microscope, used to find and analyze the concentration of airborne or bulk asbestos fibers and structures. Distinguishes among asbestos and other materials; can detect smaller asbestos fibers than does PCM. Used by EPA to find area concentrations for large AHERA project clearance.

TSCA Toxic Substances Control Act

TWA Time Weighted Average.

Work Area The area where asbestos-related work or removal operations are performed which is defined and/or isolated to prevent the spread of asbestos dust, fibers or debris, and entry by unauthorized persons.

Work Practices Procedures designed to be followed to avoid or minimize fiber release during activities affecting ACM.

November 2, 2007

1.0 INVITATION TO BID

Qualified Asbestos Removal Contractors are invited to submit bids to accomplish the removal and disposal of asbestos-containing roofing components, floor tiles, floor tile mastic, cooling tower fill, cooling tower drift eliminator, boiler insulation, spray applied fire proofing, roofing wall and duct tar as specified within the enclosed bid specifications, drawings and walkthrough.

The work is to be accomplished for Acadia-P/A Sherman Avenue LLC, ACRS Inc, and Acadia Realty LP referred to hereafter as the "Owner," The Owner is located at 1311 Mamaroneck Avenue in White Plains, New York 10605, throughout the following location:

Sherman Plaza
4650 Broadway
New York, New York

CNS Management Corp. (CNS) shall be the Owner's Environmental Consultant for this project. CNS shall conduct compliance inspections and monitoring of the work performed by the asbestos removal contractor. Bidder will be required to attend a Pre-Bid meeting where it is expected that they will familiarize themselves with the work. The bidders shall be given ample time to accomplish this familiarization through inspection. Failure of the bidder to do so shall not be cause for additional compensation to the contractor.

Bid Forms shall be submitted in a sealed envelope and delivered on or before **12:00pm** on **Wednesday, November 7, 2007** to **Mr. Elias Slaiby**. Owner Bid forms with Bid Instructions are enclosed within this section.

BID FORM

1. The undersigned, _____, having familiarized themselves with the *Specifications, Drawings, Invitation to Bid, Instructions to Bidders, Bid Form, General Conditions and Walkthroughs* affecting the cost of work for:

Owner Acadia-P/A Sherman Avenue, LLC

Address: 4650 Broadway, New York, New York

And having examined the site hereby propose to furnish all material, tools, equipment and incidentals necessary to perform all work as specified, in acceptance with the **Owner** for the **Total Bid Price** of. (\$ _____).

2. The above noted Total Bid Price is to be broken down as follows:

1) All Federal, State, Local permits: fees, notification and variance costs.

Cost for Item # 1=\$ \$5200.00

2) All costs associated with removal and disposal of asbestos containing roof membrane, roof flashing, and wall and duct tar from the roof.

Cost for Item # 2=\$ _____

3) All costs associated with removal and disposal of asbestos containing cooling tower fill, drift eliminator and pipe insulation from the roof level.

Cost for Item # 3=\$ _____

4) All costs associated with removal and disposal of asbestos containing vinyl floor tiles with black mastic and pipe insulation from the 2nd floor.

Cost for Item # 4=\$ _____

5) All costs associated with removal and disposal of asbestos containing vinyl floor tiles with black mastic, pipe insulation and spray-applied fire proofing from the 1st floor.

Cost for Item # 5=\$ _____

6) All costs associated with removal and disposal of asbestos containing boiler insulation from the basement level.

Cost for Item # 6=\$ _____

7) All costs associated with removal and disposal of asbestos containing pipe insulation from the basement level.

Cost for Item # 7=\$ _____

3. The undersigned agrees to commence work 14 days upon bid award date and time as specified by Owner, to complete such work within the specified number of calendar day(s).
4. **The undersigned agreed that this proposal shall remain in force and effect for a period of not less than 45 calendar days following the bid opening date.** It is understood and agreed that the owner reserves the right to reject any or all proposals, to waive any informal ties in bidding and to hold all proposals for the above noted period of time.
5. Selection of Subcontractors is subject to The Owner’s review prior to awarding of contract.
6. It is herewith noted that Owner will not accept any cost extras due to field conditions. It is the undersigned (Contractor) responsibility to familiarize themselves with the project during walkthroughs, specifications and drawings. Additional site visits may be pre-arranged with Owner.
7. All extra work must be written up by the Contractor in the form of a change or field order. Indicated on it must be a firm price or not to exceed time for the work. All change orders must be submitted to the Project Manager for approval prior to the commencement of work.
8. All work is to be performed during normal **work time** hours unless proper arrangements are made.
9. All construction to be executed in such a manner as not to interfere with the normal everyday operation of the mall.
10. We the contractor will comply with insurance requirements as mandated by The Owner’s Risk and Insurance Department.
11. We shall remove all debris, clean and polish all surfaces and leave all the affected floors in broom swept condition.
12. Any moving of existing equipment and furniture within the space necessary to accommodate the aforementioned project will be the Contractor’s responsibility
13. List of documents forming the basis of the bid package:
 - Asbestos Abatement Procedures supplied by Owners Environmental Consultant
 - Walkthrough provided by Owners Environmental Consultant
 - Additional pre-arranged site visits and/or walkthroughs
 - Specification and drawing addendums if applicable
14. Exceptions

15. All Bid Packages are to be enclosed with the following items:

- a) The schedule that reflects calendar day's duration for the asbestos removal.
- b) Copy of insurance certificate naming **Acadia-P/A Sherman Avenue LLC** as the certificate holder and **ACRS Inc, Acadia Realty LP** and **CNS Management Corp** as additional insured.
- c) When awarded, the undersigned will be requested to submit a notarized original Indemnification Agreement.
- d) A copy of your New York State Company Asbestos License.
- e) A list of proposed waste haulers and disposal sites with permits.
- f) A list of references. These references should be for work completed within the past 18 months.
- g) When awarded, the undersigned will be requested to submit a copy of their Haz-Com, respiratory protection, emergency response and asbestos removal standard operating procedures.
- h) Material safety data sheets and Equipment Specifications for materials and machinery to be used in accomplishing all phases of work.
- i) Failure to provide the above information may cause for the dismissal of the undersigned's bid package.

16. Bid are to include the following items and related costs, but not limited to: labor, removal, disposal, permits, fees, mobilization, transportation, disposal fees, dumpsters, insurance's, taxes, tools, services, equipment, hoisting, supervision, filing fees, and any and all including incidentals to complete all required asbestos work for a complete scope. All work to conform to all state, local and all regulatory agencies, having jurisdiction, the owner(s) and their agents.

17. All unit costs and labor rates shall include all applicable taxes, overtime, overhead profit, miscellaneous tools, insurance's, benefits, etc., for a complete cost.

This bid package is submitted by:

INSTRUCTIONS TO BIDDERS

BID FORM

- a) All **Bids** must be submitted on the **Bid Form** furnished, herewith, which shall be completed as a formal document in its entirety.
- b) Exceptions to any of the items on the **Specifications** shall be clearly noted by the **Bidder** as exceptions.
- c) **Owner** may consider as informal any **Bid**, which contains an alteration or a departure from the **Bid Form, enclosed Specifications and Drawings** other than specified.
- d) **Bid Documents**, submitted by all **Bidders**, shall be enclosed in outer and inner envelopes, both of which shall be sealed and clearly labeled with the words, "**Bid Documents**".
- e) **Owner** will neither consider nor accept any **Bid, which** is received after the time established for the receiving of same.
- f) **Owner** reserves the right to waive any information in **Bidding** or to reject any and all **Bids**.
- g) The award of the contract will be made within five (5) days after opening of the **Bids**.
- h) The **Contract** will be based upon the completion of the work according to the **Specifications**.
- i) The **Owner** reserves the right to award all or part of the requested services to one or more contractors, to reject any or all bids, to negotiate changes in the scope of work or services to be provided, and to otherwise waive all technicalities, as the owner deems to be in their best interest.

2.0 Introduction

The scope of work in this document is for the removal of asbestos containing materials for the Owner at the office building located at 4650 Broadway in New York, New York. The purpose of this document is to define the asbestos abatement scope of work. Any changes to this scope shall be submitted by the bidder in writing with their bid.

Materials identified as asbestos containing within the asbestos survey are outlined in the below table by location of the asbestos containing material with an estimated quantity.

Location	Material	Quantity	Drawing	Abatement Procedure
Roof Level				
Roof	Roof membrane & flashing	65,189 SF	AR-3	Attachments FR & R
Roof	Wall & Duct Tar	1,500 SF	AR-3	Attachments FR & R
Roof	Cooling Tower Fill & Drift Eliminator	192 SF	AR-3	Attachment F & R
Roof	Pipe Insulation	130 LF	AR-3	Attachment T & R
Basement Level				
Boiler Room	Boiler Insulation	1,260 SF	AR-4	Full Containment
Parking Area	Pipe Insulation	5,010 LF	AR-4	Attachment T & R
Tenant Floors				
1 st Floor	9"x9" VFT with ACM black mastic under 12"x12" VFT	44,126 SF	AR-1	Attachment VA
1 st Floor	Pipe Insulation	750 LF	AR-1	Attachment VA
1 st Floor	Spray-applied fire proofing	4,264 SF	AR-1	Attachment VA
2 nd Floor	9"x9"VFT with ACM black mastic	44,126 SF	AR-2	Attachment VA
2 nd Floor	Pipe Insulation	750 LF	AR-2	Attachment VA

All quantities are to be field verified via walkthroughs by the bidder; the bidder will not receive any change orders for additional quantities found during the project and will receive penalties for any disruption in work based upon extras and specification changes.

3.0 General Conditions

The Contractor (referred to hereafter as bidder) is solely responsible for supplying all costs and burden associated with permitting, qualified labor, materials, disposal and equipment necessary to perform the work required to successfully complete this project in compliance with this specification.

3.0.1 The bidder is required to submit the following documents with their bid package:

- a) A valid copy of the bidder's State of New York Department of Labor Company Asbestos License;
- b) A Certificate of Insurance with a minimum policy of \$5,000,000.00 general aggregate with \$5,000,000.00 for each occurrence; insurance certificates; the awarded bidder must list specific entities as additional insured and certificate holders.
- c) A copy of the bidder's Health and Safety Plan;

3.0.2 Bidder shall maintain a safe, clean and orderly work site, with the proper postings as per all Federal, State and Local Ordinances and Laws. The Bidder shall erect and maintain isolation barriers, warning signs and all other means for protection / warning to ensure maximum safety.

3.0.3 The Bidder shall not permit any condition to exist or engage in any practice that would result in a hazardous or a potentially hazardous condition for the building occupants, including but not limited to the tenants, Owner's employees, or the bidder's work force.

3.0.4 Bidder shall maintain harmonious labor throughout the project.

3.0.5 If the successful bidder fails to execute the contract within fourteen (14) days of award, the Owner, at his option may consider the bid and the acceptance of it to be null and void due to abandonment of the project by the bidder.

3.0.6 No changes in work are authorized or considered valid unless the Owner has signed a Change Order directing this change.

3.0.7 The Environmental Consultant will be on site at all times when work is in progress to assure compliance with all regulations and these specifications. The Environmental Consultant shall inspect the work at least once per work shift. The Environmental Consultant shall keep the Owner informed of the progress of the work based on his observations and will endeavor to guard the Owner against defects and deficiencies in the work.

3.0.8 Owner's property that is to remain in place shall be protected. If damaged by the Bidder, the Bidder shall, at Owner's discretion, either replace damaged items or reimburse the Owner for replacement at no cost to the Owner.

3.0.9 The Bidder may be back charged at the Owner's discretion for all costs associated with failure to meet the scheduled completion date. This cost shall include, but will not be limited to: Consultant's fees, loss of rental income, management charges, etc.

3.0.10 The Bidder shall take all precautions to protect his workmen, as per USEPA, OSHA, New York State and New York City Regulations.

- 3.0.11 The Bidder shall be responsible for payment of all royalties and licenses required to accomplish his work. The Bidder shall hold the Owner, Owner's agent and the Consultant harmless from any damages, losses, and other expenses arising from all suits or claims for violations, infringement on any patent rights or from negligence of work. The Bidder shall be responsible for notifying the Owner and/or Consultant if he has a reason to believe that a product specified a process or design is an infringement of a patent so that an alternate method / product may be considered if feasible.
- 3.0.12 The Bidder will Hold Harmless and assumes all responsibility with regard to any and all violations pertaining to the asbestos removal project(s).
- 3.0.13 Any delay caused in any part by the asbestos abatement contractor that impacts the starting the project on time, completing phasing end dates during the project and/or completing the project at it's designated end date will results in assessed penalties imposed by the owner against the asbestos abatement contractor.
- 3.0.14 The Bidder's application for final payment shall include the following items:
- a) Copy of Bidder's New York Asbestos License.
 - b) Copy of Bidder's Insurance Certificate.
 - c) Copy of Notifications and Variances.
 - d) Completed Waste Manifests.
 - e) Copy of Workers' New York State and New York City Asbestos Licenses and Medicals.
 - f) Copies of Daily Logs and Daily Sign-In/Out Sheets.
 - g) Copy of OSHA Air Sampling Results
 - h) Copy of Waste Transporter's and Landfill Permits
 - i) Copy of Landfill / Disposal Facility Manifests

The above items shall be submitted to the Consultant for verification and approval.

4.0 Asbestos Removal - General

Bidder shall submit a project approach with their bid submittal, the project approach shall conform to these specifications, if changes are to be made to these specifications the bidder will outline these changes within their bid package for review.

The owner will be conducting air monitoring throughout the project, the bidder will have the on-site air monitor do visual inspections of the completed area(s). In addition all work area(s) shall be maintained and remain intact until the air monitor has notified the bidder to dismantle any work area(s).

- 4.0.1 The owner will provide water and electricity to the site.
- 4.0.2 The bidder will have a Ground Fault Circuit Interrupter (GFCI) panel delivered to the site, a minimum, 2 days prior to the start of the project.
- 4.0.3 The bidder is required to have the following items posted on site throughout the duration of the project: Bidder Health and Safety Plan; EPA NESHAP 40 CFR Part 61 subparts A & M; OSHA Construction Standard 29 CFR 1926.1101; Chapter 469, New York State Department of Labor Industrial Code Rule 56 and New York City Department of Environmental Protection Title 15 Chapter 1 Attachments FR & R, and project notifications, licenses and worker certificates.
- 4.0.4 The decontamination facility will be fully constructed and operational at each work area(s) prior to asbestos removal activities taking place. All polyethylene sheeting will be 6-mil opaque, fire-retardant polyethylene sheeting with reinforced polyethylene sheeting for the decontamination floor.
- 4.0.5 All abatement activities are to be followed as indicated by this specification and all Federal, State and Local Laws. The Bidder Holds Harmless and assumes all responsibility with regard to any and all violations.
- 4.0.6 All asbestos debris is to be immediately placed in black 6-mil waste bags that are clearly marked with all appropriate signage under EPA and New York State and New York City regulations. Waste will not be allowed to accumulate inside the work area.
- 4.0.7 Waste bags are to be kept in an already established holding area, inside an on-site roll-off container or to be removed off-site when filled. No more than 40 cubic yards of waste will be stored for a period of more than 72 hours and waste bags are to be removed via wait and load. Note: waste manifests shall be provided for each pick up to the consultant prior to leaving the site.
- 4.0.8 If during abatement air sample results are reported above 0.01 f/cc, then clearance air samples will be required to be collected and analyzed. Once clearance air sampling results are reported by the laboratory to CNS, the bidder will be notified and allowed to breakdown.

4.0.9 The substrates will be encapsulated once final clearance results are received from the laboratory.

4.1 Asbestos Removal – Full Containment Procedures

Full containment procedures as outlines in NYSDOL ICR-56 and NYCDEP Title 15 Chapter 1 shall be strictly adhered to by the contractor. Full containment procedures are to be followed for the removal of ACM boiler insulation from the boiler room. Estimated quantities and locations are noted within the table of Section 1.0 of this document and project drawings.

4.1.0 The work area will be cordoned off with associated warning signs, the GFI Panel will be connected to the building power and all electric will be locked out and tagged out prior to decontamination construction.

A worker and waste decontaminated facility will be constructed and operational at each work area prior to asbestos removal activities and made operational prior to any work area preparation activities.

4.1.1 Background, Pre-abatement, During Abatement and Clearance Air samples will be collected during all phases unless indicated by Site Specific Variance.

4.1.2 Bidder shall not breakdown work area(s) until a final visual and clearance air sample results are below 0.01 fibers per cubic centimeter (f/cc).

4.1.3 In the event air sample analysis exceed 0.01 f/cc during the project all work shall cease and proper repairs and or cleaning shall be completed by the bidder; repairs include but are not limited to wet wiping area(s) designated by CNS Management, equipment replacement and/or HEPA filter replacement. Multiple air sample failures shall not be cause for bidder to receive extra(s), project penalties from Owner will be issued if schedule is exceeded.

4.1.4 Negative Exhaust Units will be placed inside the work area; exhaust ducts will be run to a manifold and exhausted outside the building. Negative pressure shall be established and maintained at -0.02” water column through the project.

4.1.5 The work area shall be pre-cleaned, utilizing wet methods and HEPA-vacuuuming.

4.1.6 The work area will be plasticized with opaque, 6-mil fire retardant polyethylene sheeting.

4.1.7 The environmental consultant shall inspect the work area once preparation activities have been completed and prior to removal activities.

4.1.8 All asbestos materials will be maintained wet during removal, and once removed from the substrate, placed directly in labeled 6-mil polyethylene waste bags.

4.1.9 Asbestos waste will not be allowed to accumulate in quantities greater than 40 cubic yards on site. Waste containers will be hard walled and hard topped and be lined with 2-layers of fire retardant 6-mil polyethylene sheeting.

4.1.10 All generated asbestos waste shall be disposed of as asbestos containing. Note: waste manifests shall be provided for each pick up to the consultant prior to leaving the site.

4.2 Asbestos Removal – Site Specific Variances

Use of New York City Department of Environmental Protection Attachments (FR, R, TM and VA) for a Site Specific Variance will be utilized for the project. All procedure outlined in the Site Specific Variance will be adhered to by the contractor. Any fines incurred by the owner due to the asbestos abatement contractor actions will be the responsibility of the asbestos abatement contractor.

The Site Specific Variance will be prepared by CNS Management Corp and will be the responsibility of the contractor to file the ACP-9.

4.2.1 Asbestos Removal – Attachments FR & R - ACM Roofing Materials

The abatement contractor is requesting a variance to perform the removal of the roofing ACM's by foam procedures utilizing remote worker and waste decontamination facilities. The asbestos abatement project for the roof will be completed in one phases, with the worker and waste decontamination facilities being constructed on roof.

The abatement contractor requests relief from the following subsections for the removal of the roofing materials:

- | | |
|---------------------|--|
| 1-41(c) | During abatement air sampling inside the work area |
| 1-41(d) | No post abatement clearance air monitoring |
| 1-81(j) | Not to pre-clean the work area |
| 1-81(m) | Partial plasticization of the work area |
| 1-82(a) & 1-83(a) | Remote worker and waste decontamination facilities |
| 1-91 | Engineering controls |
| 1-102(b) | Not to saturate ACM material with water |
| 1-112(d) & 1-112(e) | No settling periods or 2 nd & 3 rd cleanings |

Prior to commencing removal activities, The abatement contractor will remote construct the worker and waste decontamination facilities on the sixth floor of the building as described in Attachment R. Please see the attached drawing for the exact location of the decon facilities. The roofing materials will be coated with a minimum 1" of foam.

The foam will remain on the material for the duration of the removal activities. Roofing materials will be removed by manual methods or HEPA Equipment power tools and will be immediately bagged in compliance with Attachment FR. Upon completion of the removal, the work area will be thoroughly cleaned. The removal will be performed in accordance with

attachments FR & R. Background, pre-abatement and during air samples will be collected and analyzed by PCM methods for the project.

4.2.2 Asbestos Removal – Attachment FV - ACM Flooring Materials

The abatement contractor is requesting a variance to perform the removal of the flooring ACM's by foam procedures as outlined in Attachment FV. The asbestos abatement project for the flooring materials will be completed on the first and second floors.

The abatement contractor requests relief from the following subsections for the removal of the floor tiles and associated mastic:

- | | |
|---------------------|--|
| 1-41(d) | No post abatement clearance air monitoring |
| 1-81(j) | Not to pre-clean the work area |
| 1-81(m) | Partial plasticization of the work area |
| 1-91(c) & (g) | Engineering Controls |
| 1-102(b) | Not to saturate ACM material with water |
| 1-112(d) & 1-112(e) | No settling periods or 2 nd & 3 rd cleanings |

Prior to commencing removal activities, the abatement contractor will construct the worker and waste decontamination facilities on the ground floor of the building. Please see the attached drawing for the exact location of the decon facilities. The work area will be partially plasticized, up 5 feet on the walls. Negative exhaust units will be placed inside the work area to establish negative pressure inside the containment area. The exhaust ducts will be exhausted to the outside of the building and monitored. The flooring materials will be coated with a minimum 1"-3" of foam. The foam will remain on the material for the duration of the removal activities. Flooring materials will be removed by manual methods and will be immediately bagged in compliance with Attachment FV. Upon completion of the removal, the work area will be thoroughly cleaned. The removal will be performed in accordance with attachment FV. Background, Pre-abatement and during abatement air samples will be collected and analyzed by PCM methods for the project.

4.2.3 Asbestos Removal – Attachment VA - ACM Flooring Materials & Pipe Insulation within the Same Work Area

The abatement contractor is requesting a variance to perform the removal of the flooring ACM's by foam procedures with pipe insulation within the same work area as outlined in Attachment VA. The asbestos abatement project for the flooring materials will be completed on the first and second floors.

The abatement contractor requests relief from the following subsections for the removal of the floor tiles and associated mastic:

- | | |
|---------|---|
| 1-81(m) | Partial plasticization of the work area |
|---------|---|

Isolation barriers shall be installed with 2 layers of 6-mil plastic sheeting sealed with tape and or caulked for air tightness. The number of air changes required for during abatement shall be increased to 6. The walls of the work area shall be plasticized with two layers of 6-mil plastic sheeting. The asbestos pipe insulation shall be removed first by employing wet methods. A visual inspection shall be conducted by the asbestos supervisor and project monitor in order to ensure the absence of debris on the floor. VAT removal shall not begin until at least one hour after the visual inspection in order to decrease the fiber concentration inside the work area. The floor tiles will be removed by utilizing foam methods as detailed in Attachment FV. Once the removal of the floor tiles is completed a three phase cleaning as detailed in section 1-112, employing a 12 hour, a 4 hour and a minimum 1 hour waiting/settling periods will be adhered to and then followed by clearance air monitoring.

4.2.4 Asbestos Removal – Attachment F - ACM Cooling Tower Fill Material

The abatement contractor is requesting a variance to perform the removal of asbestos containing fill material from the roof top cooling tower as outlined in Attachment F.

The abatement contractor requests reliefs from the following subsections for the removal of the cooling tower fill material:

- | | |
|---------|---|
| 1-81(m) | Partial plasticization of the work area |
| 1-91(c) | Engineering Controls |

A Remote worker and waste decontamination facility will be established on the roof level, adjacent to the cooling tower. Isolation barriers shall be installed with 2 layers of 6-mil plastic sheeting sealed with tape and or caulked for air tightness. The floor of the work area shall be plasticized with two layers of 6-mil polyethylene sheeting. The exterior of the cooling tower (except for the entrance) shall be plasticized with two layers of 6-mil polyethylene sheeting and an additional layer of 6-mil reinforced polyethylene sheeting. Negative pressure equipment shall be installed and operated during the entire project until clearance air sampling is completed. The work area shall be smoke tested daily to ensure there are no stagnant points in the work area. Once the removal of the cooling tower fill material is completed a three phase cleaning as detailed in section 1-112, employing a 12 hour, a 4 hour and a minimum 1 hour waiting/settling periods will be adhered to then followed by clearance air monitoring.

4.2.5 Asbestos Removal – Attachment T – Glovebag Procedures Inside Tent Enclosure

The abatement contractor is requesting a variance to perform the removal of pipe insulation as outlined in Attachment T. The asbestos abatement project for the pipe insulation materials will be completed on the basement and roof level.

The abatement contractor requests relief from the following subsections for the removal of the pipe insulation:

- | | |
|---------|---|
| 1-81(m) | Partial plasticization of the work area |
|---------|---|

Isolation barriers shall be installed with 2 layers of 6-mil plastic sheeting sealed with tape and or caulked for air tightness. The number of air changes required for during abatement shall be increased to 6. The walls of the work area shall be plasticized with two layers of 6-mil plastic sheeting. The asbestos pipe insulation shall be removed first by employing wet methods. A visual inspection shall be conducted by the asbestos supervisor and project monitor in order to ensure the absence of debris on the floor. VAT removal shall not begin until at least one hour after the visual inspection in order to decrease the fiber concentration inside the work area. The floor tiles will be removed by utilizing foam methods as detailed in Attachment FV. Once the removal of the floor tiles is completed a three phase cleaning as detailed in section 1-112, employing a 12 hour, a 4 hour and a minimum 1 hour waiting/settling periods will be adhered to and then followed by clearance air monitoring.

May 14, 2009

1.0 Compliance Report

CNS Management Corp (CNS) monitored the asbestos removal procedures of Delta Environmental within the building located at 4650 Broadway in Manhattan, New York aka Sherman Plaza. The asbestos removal project was completed in two phases; Phase 1 started on April 28, 2008 and lasted through June 13, 2008 and Phase 2 started on March 3, 2009 and lasted through April 2, 2009. Phase 1 of the asbestos project consisted of the removal of 1,260 Square Feet (SF) of boiler insulation, 1,500 Linear Feet (LF) of pipe insulation, 88,252 SF of VAT floor tiles and 4,264 SF of spray applied fire proofing throughout the entire first floor, second floor and basement boiler room. Phase 2 of the asbestos project consisted of the removal of 5,010 LF of pipe insulation within the basement parking garage and 192 SF of cooling tower fill on the roof.

The removal project was completed in compliance with New York City Department of Environmental Protection (NYCDEP) Title 15 Chapter 1 asbestos regulations with the use of Sub-Chapter G for interior materials prior to demolition and Attachments T & R for the non-friable cooling tower fill.

A total of 534 cubic yards of asbestos-containing waste was generated from the removal project. The waste was containerized in doubled 6-mil poly bags and each bag was labeled with the generators name and location as outlined in the EPA's regulation 40 CFR Part 61. The waste transporter was ATC located at PO Box 1044 in Hampton Bays, NY, who transported the waste to Minerva Landfill located at 900 Minerva Road in Waynesburg, Ohio. Please see Delta's close out package for the completed waste manifest.

CNS representatives Mr. Felix Ogleton (Certificate #05-02882) and Mr. Papa Diop (Certificate #04-05317) were the on-site Project Monitors for the project. A daily log was maintained indicating visitors and visual inspection findings throughout the project. The work area was monitored via air sampling throughout the project in compliance with the NYSDOL regulations. A field sketch identifying the locations of the daily air-samples was completed on the pre-abatement checklist form and updated when the locations of the air-samples changed.

Air samples were collected using 0.8 micron Mixed Cellulose Ester (MCE) filters mounted on a tripod and attached to a high volume sampling pump. These pumps are calibrated at the beginning of each work shift and each hour during the work shift. Each sample ran for at least 80 minutes to obtain the minimum volume of air as outlined in the National Institute for Occupational Safety and Health's (NIOSH) sampling method 7400 (NIOSH 7400).

The collected air samples were submitted daily to AmeriSci Laboratories (ELAP # 11480) located at 117 East 30th Street in New York City, New York. The samples were analyzed via Phase Contrast Microscopy (PCM) in compliance with NIOSH 7400 protocol for analysis. PCM is used to count non-specific fibers of certain length to width (3:1) ratios and the results are reported as fibers per cubic centimeter (f/cc).

CNS has completed final visual inspections with clearance air monitoring for Phase 1 on May 8, 21, 30, June 9, 16 of 2008 and for Phase 2 on March 17, 25 and April 2 of 2009. The final inspections were conducted by the Project Monitor and were completed after third phase (or final) cleaning. The findings of the inspection(s) were recorded in the contractor supervisors log book. Laboratory analytical results indicate all airborne asbestos fiber levels were below the NYCDEP, NYSDOL and NESHAP re-occupancy regulation level of less than 0.01 f/cc.

If you have any questions or require additional information, call me at (516) 932-3228.

Sincerely,

Michael R. Nolan

RE: CMIS Management Corporation
Job Number: 200244772
P.O. 0025 5004
1017549 - Sherrill Place - 4500 Broadway - 2nd Floor (Richmond)

Dear Mr. Williams:

Enclosed are the results of PCM software analysis of the following CMIS Management Corporation System running on Windows as available on Monday, April 26, 2004, for a 28 hour period.

01, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 55

The 17 errors captured in the Gazette are all errors by AmeriSci (the User). These errors were processed according to PCM methodology as described in JN0002 Method T400, Issue 02, 02/2004. The existing error report generated in previous versions of the method as well as sample information codes are included in the report. The table attached represents a summary of the error conditions.

AmeriSci (the User) is the single analysis recipient of the data from the System. AmeriSci assumes no responsibility for customer provided data such as "sample location" or "correlation exception". Data report results are valid in spite of any manipulation by AmeriSci or any third party during storage. Complete analytical documentation is available and available upon request. The National Institute of Standards and Technology Accreditation requirements mandate that the report shall not be reproduced, stored in full or in part for purposes of the laboratory.

AmeriSci represents the capability to receive and reproduce. Please contact us for any further analysis of all of our work.

Sincerely,

Mark E. Watkins
PCM Manager

CEO Management Corporation
475 Charles Street
250 W. 29th County Road
City 208
Newark, NJ 07102

Attn: CEO Management Corporation
Joe Nuzzo 201-261-4719
201-225-1028
ADDRESS: 250 West 29th Street - 2nd Floor - New York City

Dear Mr. Nuzzo:

Enclosed are 24 results for PCB nonhazard analysis of 24 Activity C&S Management Corporation samples received at AmeriSci on Monday, April 21, 2008, for a 24 hour turnaround.

21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36

The 24 samples analyzed in Air Cassades were analyzed according to EPA Method 1631. These results were processed according to PCB methodology as specified in EPA Method 1631, Table 22, 2/1/97. The resulting data have been checked to ensure veracity of the reported PCB concentrations reported when processed. The table enclosed represents a summary of the data from this test.

These results (PCB) is the sample values expressed as Picograms per liter (pg/L). AmeriSci requires responsibility for customer supplied data such as "Sample Number" or "Sample Name". This report shall not be used to establish product endorsement by AmeriSci or any AmeriSci testing agency. Complete analytical documentation is included and available upon written request. The National Institute of Standards and Technology Accreditation requirements mandate that this report cannot be reproduced, in whole or in part, without the approval of the Customer.

AmeriSci encourages the opportunity to enter your organization. Please contact us if you have questions or need any assistance.

Sincerely,

Mark G. Duffin
CEO Manager

Phase Control Microscopy (PCM) Fiber Results
Assigned: Sherrill Pugh; Bob Krosby; Top Five (Top)

Sample #	Sample Name	Core Diameter (µm)	Core Length (µm)	Core Area (µm²)	Core Volume (µm³)	Core Density (g/cm³)	Core Length (µm)	Core Area (µm²)	Core Volume (µm³)
1E	Core of Silica Fiber	4.0	100	160	0.00016	2.33	4.0	160	0.00016
1F	Core of Silica Fiber	4.0	100	160	0.00016	2.33	4.0	160	0.00016
1G	Core of Silica Fiber	4.0	100	160	0.00016	2.33	4.0	160	0.00016

Discussion

The data shows that the core diameter of the fiber is 4.0 µm. The core length is 100 µm. The core area is 160 µm². The core volume is 0.00016 µm³. The core density is 2.33 g/cm³. The core length is 4.0 µm. The core area is 160 µm². The core volume is 0.00016 µm³. The core density is 2.33 g/cm³.

5000400 - 10/10/1510, 4150 (Country, 100th Street, 107th Street) (Signed America 5/7/2006)

Dear Dennis Power,

Enclosed are the results of the 10-day analysis of the delivery of ENS Management Corporation samples received at AmeriSci on Tuesday, April 27, 2006, for a 24-hour broadcast:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16

The 10 samples analyzed fully delivered were prepared to Analyze and Report Systems. These samples were prepared according to PCR methodology as specified in the PCR Method 2400, Issue 02, 01/03/04. The delivery used the directed (1-trial) version of 2400 method as well as the more extensive 2400 with the input. The data attached represents a summary of the data collected.

This report includes ONLY the results analyzed as described in the above. AmeriSci assumes no responsibility for results reported data with an "unknown" or "no results" returned. This report must not be used to determine compliance by AmeriSci or any AmeriSci affiliate agency. Complete analytical documentation is available and available upon written request. The National Institute of Standards and Technology Association represents, maintains and has the right to use the technology, dated to the extent of the agreement of the laboratory.

AmeriSci provides the opportunity to view and request data for all samples for any further evaluation or with any questions.

Sincerely,

Mark G. Powers
Lab Manager

Dear CaseMgt People:

Attached are the results for 2007 graduate studies of the following Case Management Corporation employees received in Brooklyn on Tuesday, April 29, 2008. See a 24 hour internet

01 02 03 04 05 06 07 08 09 10 11 12 13 14 15

- For 23 samples submitted by CaseMgt Corp to AmeriSci for Lead Detection. These samples were analyzed according to 2007 methodology as updated to Method Manual Issue 03, 01/08. The sampling was used for detecting in program waters of the method of 15 lead values provided noted within the report. The data related represents a summary of the 24 hour report.

The field report data is for AmeriSci analysis conducted in Brooklyn from 4/29/08. AmeriSci assumes no responsibility for customer supplied data such as "Sample Number" or "In Service Sample". This report may not be used to claim product performance by AmeriSci or any AmeriSci supplying agency. Complete analytical recommendations are provided and available upon initial request. The data was handled in Compliance and Technology Accreditation requirements, involving that the data must not be released, except to be worked by approval of the authority.

AmeriSci provides this service to serve your customer. Please contact us for any further assistance or additional questions.

Sincerely,

Martin J. Alvarez

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Thursday, May 01, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16

The 16 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc min of fiber area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers

Re: CMS Management Corporation
100 Niagara Street, 1003
P.O. #4231742
#28524: General Counsel, CMS Research For New Jersey

Dear Valued Partner:

Thank you for sending the FDCP violation analysis of the following CMS Management Corporation matters received at AmeriSci on Sunday, May 03, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16

The 16 matters contained in the attachments were assigned to AmeriSci's 100th Anniversary. These matters were assigned according to FDCP (Assignment) as specified in FDCP Matters Table (File #2, 01/2008). The covering letters and the document in electronic format of the matters in "A" were prepared separately noted within the week. The table attached represents a summary of the 16 matters received.

The model letter (01) is the sample template prepared by Thomson and Associates. AmeriSci retains responsibility for matters received like such as "sample location" or "no relative assigned". This report may not be used to form product endorsement by AmeriSci or any AmeriSci marketing agency. Complete detailed instructions in writing and available upon written request. The National Business of Standards and Technology Accreditation requirements included the fact every matter be administered, matter in NJ without the approval of the attorney.

AmeriSci associates this opportunity to thank your organization. Please contact us for any further questions or with any questions.

Sincerely,

March R. England
FDCP Manager

Final Order Summary

Ordered the design of RFP system analysis of the Gateway GIS Management Corporation located below at AmeriSci on Tuesday, May 01, 2000, for a 24 hour response.

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16

The 16 services specified in our Standard Order Request by AmeriSci do not include: These services were created according to final methodology as specified in RFP004 Master RFP Issue #2, 4/1/00. The company also used our detailed purchase system of the ordering as 177 per industry reference notes within the report. The three optional services are a feature of the 177-type order.

For AmeriSci Order Only in the system analysis specified in *Request for Offer* only. AmeriSci reserves the responsibility for numerous services such as "design process" or "design process". This report may not be used to claim project ownership by AmeriSci or any AmeriSci partner agency. Copyright reserved. Confidentiality is assured and transferable upon order receipt. The National Institute of Standards and Technology Accreditation Requirements, mentions that the Accreditation will be introduced, issued in full within the approval of the company.

AmeriSci represents the opportunity to some plus organization. Please contact us for any further assistance or technical support.

Sincerely,

Richard E. Brown
RFP Manager

630 East Broadway, 4500 Broadway, New York, NY 10002

Dear Charles Brown:

- Enclosed are the results for URS Laboratory analysis of the URS Management Corporation samples received at AmeriSci on Wednesday, May 3rd, 2000. Your URS has requested:

20, 21, 22, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36

- The 10 samples contained in 30 Containers were shipped to AmeriSci via First Class. These samples were analyzed according to PCB methodology as specified in NIOSH Method 7402 Issue #2 (1/98). The numbers given may not correspond to previous versions of this method as they were under development at the time. The 1020 analysis represents a summary of the PCB report output.
- This report relates only to the specific analysis requested by the URS and does not constitute an opportunity for AmeriSci to provide data such as cleanup location or low residue samples. This report should not be used to make product recommendations by AmeriSci or any analysis involving safety. Complete analytical documentation is available and available upon request. The National Institute of Standards and Technology Accreditation number for this report will not be disclosed until in writing the approval of the laboratory.

AmeriSci also wishes you opportunity to do a joint site visit. Please contact us for any further evaluation or with any questions.

Sincerely,

Steven J. Turley

PCB Analyst

RE: ONS Management Corporation
Job Order #3352083
P.O. #45004
450 Charles Plaza, 45th Floor, New York, NY 10036

Dear Customer Service

Enclosed are materials for PCP inhibitor analysis of EXAMINING ONS Management Corporation, performed at AmeriSci on Friday, May 09, 2008, for a 24-hour turnaround.

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16

The 16 samples submitted in Air Mailer 101 were received by AmeriSci via Hand Delivered. These samples were prepared according to PCP methodology as described in APOD-1 (revised 1/01, issue #2, 01/2004). The coating data used are described in multiple sections of the method in 70. Only values shown were used for report. The 14100 pleated impinger is a liability of the PCB vendor while

P.O. #A261048
A261048; Sherman Plaza, 4950 Broadway - 2nd Floor - Doring

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Friday, May 09, 2008, for a 24 hour turnaround:

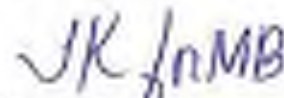

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16.

The 16 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/sq mm of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
PCM Manager

RE: CNS Management Corporation
Job Number 208050383
P.O. #A281543
A281548; Sherman Plaza, 4650 Broadway 2nd Floor Phase #1 - Clearance (Report Amended
5/14/2008)

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Friday, May 09, 2008, for a 12 hour turnaround:

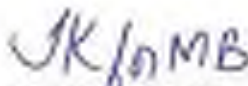

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13

The 13 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/sq mm of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin B. Brothers
PCM Manager

Dear Charles Powers:

Enclosed are the results for TEM fiber analysis of the following CNS Management Corporation samples received at AmeriSci on Friday, May 09, 2008, for a 12 hour timeframe:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13

The 13 air samples were sent to AmeriSci via Hand Delivered. These samples were prepared according to AHERA Protocol.

Table I represents a summary of all pertinent information used for the structure (Fiber) density and concentration calculations. Included are the size of each structure counted, the structure density and concentration, type of fibrous material detected and the analytical sensitivity, which represents the concentration by the detection of one structure in the TEM structure count. Copies of the Fiber Count Sheets are included. These data sheets contain information for structure length/width, structure type, structure morphology and pertinent information on EDS, SAED and photography.

This report relates ONLY to the sample analysis expressed as structure density. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci, NVLAP or any agency of the U. S. Government. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the written approval of the laboratory.

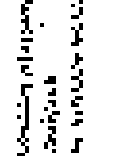

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Paul J. Mucha
Laboratory Director

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Tuesday, May 13, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16, 17, 18

The 18 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/16/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/sq. mm of fiber area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Manin El Brachers
PCM Manager

Job Number 208053472
P.O. #A281048
A281048: 4850 Broadway, Sherman Plaza 2nd Floor Phase #2 (During)

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Tuesday, May 20, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16, 17, 18

The 18 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc mm of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
PCM Manager

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Wednesday, May 21, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16, 17, 18

The 18 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/04. The counting rates used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the floor count results.

This report relates ONLY to the sample analysis expressed as fibers/sq m/m of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Wednesday, May 21, 2008, for a 12 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14

The 14 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/sq mm of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report MUST NOT be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

Dear Charles Powers:

Enclosed are the results for TEM fiber analysis of the following CNS Management Corporation samples received at AmeriSci on Wednesday, May 21, 2008, for a 12 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14

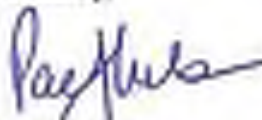

The 14 air samples were sent to AmeriSci via Hand Delivered. These samples were prepared according to AHERA Protocol.

Table I represents a summary of all pertinent information used for the structure (fiber) density and concentration calculations. Included are the size of each structure counted, the structure density and concentration, type of fibrous material detected and the analytical sensitivity, which represents the concentration by the detection of one structure in the TEM structure count. Copies of the Fiber Count Sheets are included. These data sheets contain information for structure length/width, structure type, structure morphology and pertinent information on EDS, SAED and photography.

This report relates ONLY to the sample analysis expressed as structure density. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to state product endorsement by AmeriSci, NVLAP or any agency of the U. S. Government. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the written approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Paul J. Micho
Laboratory Director

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Thursday, May 22, 2008, for an immediate turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12

The 12 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/04. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/bq mm of fiber area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers

Operations Supervisor

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Tuesday, June 03, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16

The 16 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/04. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc m³ of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Friday, June 06, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15

The 15 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc mm of fiber area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

RE: CNS Management Corporation
Job Number 208062072
P.O. #A281048
A281048; 4650 Broadway, Sherman Plaza - 1st Floor (Clearance)

Dear Charles Powers:

Enclosed are the results for TEM fiber analysis of the following CNS Management Corporation samples received at AmeriSci on Monday, June 09, 2008, for a 12 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12

The 12 air samples were sent to AmeriSci via Hand Delivered. These samples were prepared according to AHERA Protocol.

Table I represents a summary of all pertinent information used for the structure (fiber) density and concentration calculations. Included are the size of each structure counted, the structure density and concentration, type of fibrous material detected and the analytical sensitivity, which represents the concentration by the detection of one structure in the TEM structure count. Copies of the Fiber Count Sheets are included. These data sheets contain information for structure length/width, structure type, structure morphology and pertinent information on EDS, SAED and photography.

This report relates ONLY to the sample analysis expressed as structure density. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci, NVLAP or any agency of the U. S. Government. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the written approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Paul J. Mucha
Laboratory Director

RE: CHS Management Corporation
Job Number 2000021011
P.O. #4201600
Apt 1043, 2150 Broadway, 3rd Floor Fifth Cross Street (Boeglyev)

Dear Charles Street:

Enclosed for the results of PCSI selected samples of the document CHS Management Corporation sample 2000021011 in
Amesbury on Thursday, June 17, 2000 by a PCSI team.

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12

The 12 samples contained in 12 Containers were identified by PCSI as 12 samples. These samples were prepared
according to PCSI methodology as reported by PCSI (Amesbury FAX Issue #2, 01/99). The resulting data were analyzed
in previous versions of the method as 12 samples which identified them as 12 samples. The identification procedure is
a function of the PCSI results.

Management CHS is the sample analysis department of PCSI, Amesbury, New York. AmeriSci assumes no responsibility
for customer sample data used to identify samples of 12 samples. The report should be used to check product
identification by AmeriSci or any PCSI service agency. Customer analysis documents to identify and transfer
1204 samples. The National Institute of Standards and Technology identification requirements, samples that the
report will be the method, except to be within the approval of the laboratory.

AmeriSci procedures are reported to be used for identification. Please contact us for any further assistance or with any
questions.

Sincerely,

Mark E. Richey
Operations Supervisor

RE: AM Management Corporation
Jan Number 200001002
P.O. #425104
Address: AMB Property, Statens Vega - Foster Road, P.S. 9

Dear Charles Pinner:

Subsequent to the receipt for FCM #424334 receipt of the Analytical Management Corporation sample received at AmeriSci on June 13, 2000 for a 30 Day Assessment:

12, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14

The 12 samples submitted in AM Calibration were analyzed to AmeriSci's standard methods. Three samples were analyzed according to FCM #424334 receipt of the Analytical Management Corporation sample received at AmeriSci on June 13, 2000 for a 30 Day Assessment. The remaining nine (9) samples were analyzed according to the standard methods of the AMB Property, Statens Vega - Foster Road, P.S. 9.

The report of the AMB Property, Statens Vega - Foster Road, P.S. 9 is the sample analysis expressed as Percentages of the total sample. AmeriSci is not responsible for customer handling data such as "Sample Number" in the volume provided. This report may not be used in cases where involvement by AmeriSci or any involved party is required. Certain physical characteristics are required and samples in loose plastic bags are not acceptable. The National Institute of Standards and Technology Accreditation requirements, procedures and test methods may be applicable, except in the event of the approval of the laboratory.

AmeriSci is not responsible for the accuracy of other test organizations. Please contact us for any further questions. AMB Property, Statens Vega - Foster Road, P.S. 9.

Sincerely,

Charles Pinner
Operations Director

Job Number 200803076
P.O. #A261048
A261048; 4650 Broadway, Sherman Plaza - Boiler Room

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Monday, June 16, 2008, for a 24 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08

The 8 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc mm of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Monday, June 16, 2008, for a 12 hour turnaround:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12

The 12 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc mm of fiber area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Friday, March 13, 2009, for a 24 hour turnaround:

25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 38

The 12 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method T400, Issue #2, 8/15/04. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/sq m of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Saturday, March 14, 2009, for a 24 hour turnaround:

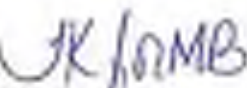

37, 38, 39, 40, 41, 42, 43

The 7 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

Dear Craig Evans:

Enclosed are the results of a PMS statistical analysis of the following CNS Management Corporation contracts which appeared in America on Tuesday, March 27, 1998, for the following companies:

1. 2. 3. 4. 5. 6. 7.

The following contracts in the categories were classified by AmeriSci as listed below. These contracts were assigned ratings to PMS membership for each of the following 1000 issues #1, 2, 3, 4, 5, 6, 7. The ratings were used to determine the relative strength of the contract. The ratings were also used to determine the relative strength of the contract.

This document may be used for statistical purposes by the company or other party. AmeriSci assumes no responsibility for anyone's use of this data for any purpose other than the one for which it was intended. This document may be used in any product published by AmeriSci or any other company. Computer analysis of contracts is intended and available upon request. The National Institute of Statistics and Technology has provided legal advice regarding the use of this data and has recommended that it not be used without the approval of the company.

AmeriSci warrants that the data is accurate and complete. It is not intended for use in any other way or with any other data.

Sincerely,

Mark S. Evans
President, AmeriSci

Dear David Powell,

Attached are the results for 1024 samples analyzed at the following GIS Management Corporation service location in
Edmonton, Alberta, Canada, March 19, 2009, for a 24 hour turnaround.

1, 2, 3, 4, 5

The 5 samples submitted by Mr. Powell were analyzed by AMERISCI via HPLC/MS/MS. These samples were processed
according to the methodology as specified in WQML Method 4400 (revision 01, 01/04). The following information and directions
apply to this analysis. If this method is not used, please advise the laboratory within the report. The labels attached represent a
summary of the other good results.

The report states that the 5 samples analyzed are listed as follows: 1001, 1002, 1003, 1004, 1005. Amersci is not responsible
for samples submitted with an "incomplete" or "no volume received". The report must not be used to make a claim or
statement by Amersci or any other analytical agency. Complete analytical documentation is available and available
upon written request. The highest priority of Amersci and Technology Association is customer service and the
laboratory will be pleased to assist you in any way without the expense of the laboratory.

Amersci is not responsible for accuracy of your final operations. Please contact us if you have questions or wish any
directions.

Sincerely,

David Powell
Company Director

Report Name:

1. The specimen was submitted for phase contrast microscopy (PCM) and the results are as follows:
 The specimen was found to contain malignant glioma cells. The cells are highly pleomorphic and show significant nuclear atypia. The cells are arranged in a disorganized pattern and show evidence of mitosis. The cells are positive for GFAP and Ki-67. The specimen is consistent with a diagnosis of malignant glioma.

11) Review system configuration to verify for correct resolution of image resolution and camera resolution. The resolution of the image is determined by the resolution of the camera and the resolution of the microscope. The resolution of the camera is determined by the number of pixels per inch (PPI) and the resolution of the microscope is determined by the wavelength of light and the numerical aperture (NA) of the objective lens. The resolution of the microscope is approximately 200 nm. The resolution of the camera is approximately 5.0 µm. The resolution of the system is approximately 5.0 µm.

RE: CSI Management Corporation
Jan. Inv. No. 2777/17353
P.O. 1139164P
400 41st St. 11th Floor, Brooklyn, New York 11218-3000, NY

Dear Chester Korman:

Enclosed are the results of a PGM analysis of the following CSI Management Corporation retention request of AmeriSci on Form, dated 03, 1998, for a 24 hour retention.

23, 24, 25, 26, 27, 28, 29, 30, 31

The 12 samples submitted as Evidence were shipped to AmeriSci by Hand Delivery. These samples were prepared according to PGM methodology as specified in NIOSH Method 7100, dated 02, 1994. The resulting data will be distributed to pertinent sections of the method as it relates to the evidence submitted for analysis. The above findings represent a summary of the laboratory results.

You may wish to refer to the various reports submitted in the retention of this case. AmeriSci assumes no responsibility for evidence submitted and such as "sample location" or "evidence description". This report should not be used as direct product identification by AmeriSci or any Amersci Analytical facility. Complete analytical documentation is available and available upon request. The National Institute of Standards and Technology Accreditation Program (NISTAP) number for the method used for this analysis is available in the report for review of the laboratory.

AmeriSci warrants the specificity in serving your organization. Please contact us for any further information or with any questions.

Sincerely,

Robert E. Anderson
Executive Director

AMSC07: 4000 Broadway, 5th Floor, New York, New York 10018

Dear Charles Poulos:

Enclosed are the results for HPLC release assays of the following CNA Management Corporation samples received in accordance with NY 10000, dated 04/16/07.

01, 01, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16

The 16 samples analyzed in NY 10000 were shipped to AmeriSci via FedEx Colissimo. These samples were analyzed according to HPLC methodology in accordance with FDA Method 1002.1000. The following table summarizes the results of the assays and the release percentages noted within the report. The only detected impurities in samples of the 16 samples are:

The release percent listed in the table was determined by comparing the peak area of the impurity to the peak area of the standard. The results must not be used to determine product release until they are verified by AmeriSci or any AmeriSci authorized agency. Complete analytical documentation is provided and retained upon release. The National Institute of Standards and Technology accreditation requirements, number 04-10000, must not be violated, except in 04 without the approval of the Operator.

Should you have any questions or need any information, please contact us by any other means or via any means.

Sincerely,

Wayne Soder

RE: Chief Management Consultant
595 Wacker Administration
P.O. #2201845
Atlanta, GA 30329 (Georgia Ave., Stock County)

Dear Charles Glavin:

Enclosed for the purpose of your review are the results of the January 1992 Management Consultant survey regarding Innovation in America on March 23, 1992, to a 24-page questionnaire.

1, 2, 3, 4, 5

The 5 profiles contained in the Questionnaire were the result of AmeriSci's third National Study. These profiles were prepared using the PCA methodology as described in *AMERISCI* (Spring 1988, Issue #2, 201-206). The resulting data would not be discussed in private sessions of the Institute or AMERISCI unless otherwise stated within the report. The data reached you as a courtesy of the four consultants.

The report from *AMERISCI* to the Institute was prepared as follows: each of the four AMERISCI profiles is responsible for a certain aspect of the study of "Innovation in America". The report contained the results of each profile independently of any AMERISCI consulting services. Complete analytical interpretation is provided per AMERISCI when called upon. The National Institute of Scientific and Technology Innovation's commitment includes that the use of such data be restricted, except in the event of the request of the Institute.

AMERISCI appreciates the opportunity to work with you organization. Please contact us for any further information or with our questions.

Sincerely,

Charles Glavin

Reporting Notes:

(1) Fibers/vol cannot be calculated for samples for blanks with no air volume.

By: NICKI THOMAS/AMSC, Date: 03/23/09, Using: Olympus Model QM3 PCM microscope, Serial: 8040001, Analyzed by: Toyama Consulting

Limit of Detection: 1.1 fibers per field or 1 fiber/100 fields. Blank analysis was reported when available. However, we are not able to adjust results of individual samples in this report. This report shows OEL V to be empty and not compressed as shown in use of

Site area: ND-100 (per observed Max No. 30000) for 100-field grids. Full area = 8.2073 mm². TWA = 8.19 TWA. Individual samples were reported for results of 8 by period not sampled. Upper 10% Confidence Limit (Employee Compliance

TWA) Calculated as a % of OEL V to determine probability of compliance with the OEL. (Source: modified from 3520, Serial: 3-10, (NY) ELAP Lab 11482, Serial Lab # 10060)

Dear Charles Brown:

Enclosed are the analysis of 100Mm Sediment samples of the following GMX Management Corporation sample numbers as Analyzed on Tuesday, March 22, 2005, for a 24 Hour Turnaround:

13, 21, 24, 25, 93, 22, 23, 24, 45, 47, 42, 43, 44, 45

The 24 samples submitted with Parameters were shipped to AmeriSci via FedEx Overnight. These samples were analyzed according to EPA methodology as specified in USEPA Method 1631, Issue 02, 01/2004. The sampling rates used with laboratory standards during the method 1631 analysis are listed below with the report. The data reflect the results of a laboratory of the State of New York.

We must extend our thanks to the average people organization in Hempstead for their help. AmeriSci takes no responsibility for whether required data such as "people located" or "air volume sampled". This report can not be used to attribute any responsibility to AmeriSci or any AmeriSci consulting agency. Complete analytical documentation is available and available upon request. The Federal Institute of Standards and Technology Accreditation requirements regarding the use of this report by reproduced, stored in retrieval systems or otherwise disseminated by the laboratory.

AmeriSci provides you opportunity to view your report online. Please contact us if you require further assistance or with any questions.

Sincerely,

Martin E. Burke
Operations Supervisor

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Wednesday, March 25, 2009, for a 24 hour turnaround:

45, 47, 48, 49, 50, 51, 52, 53, 54, 56, 56, 57, 58, 59

The 14 samples contained in Air Cassettes were shipped to AmeriSci via Hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/04. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/sq mm of fiber area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product enforcement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Broders
Operations Supervisor

Dear Charles Powers:

Enclosed are the results for PCM asbestos analysis of the following CNS Management Corporation samples received at AmeriSci on Wednesday, April 01, 2009, for an immediate turnaround.

1, 2, 3, 4, 5, 6, 7

The 7 samples contained in Air Cassettes were shipped to AmeriSci via hand Delivered. These samples were prepared according to PCM methodology as specified in NIOSH Method 7400, Issue #2, 8/15/94. The counting rules used are described in previous versions of this method as "A" rules unless otherwise noted within the report. The table attached represents a summary of the fiber count results.

This report relates ONLY to the sample analysis expressed as fibers/cc min of filter area. AmeriSci assumes no responsibility for customer supplied data such as "sample location" or "air volume sampled". This report must not be used to claim product endorsement by AmeriSci or any AmeriSci certifying agency. Complete analytical documentation is archived and available upon written request. The National Institute of Standards and Technology Accreditation requirements, mandates that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Marvin E. Brothers
Operations Supervisor

1.0 Introduction

CNS Management Corp. (CNS) was retained by Acadia P/A Sherman Avenue, LLC to complete the removal of three-Underground Storage Tanks (UST's) with subsequent soil and groundwater remediation at 4650 Broadway in New York, New York referred to hereafter as the "subject site". See Figure I: Site Location Map. Corrective action is required based upon findings of gasoline related contaminants within analytical results, discussed further herein. Note: upon notification of analytical results, CNS contacted the NYSDEC and was issued spill # 09-02240.

Based on observations made within historical Sandborn Fire Insurance Maps, CNS identified gasoline UST's within the southwestern portion of the basement. CNS subsequently exposed the UST's via excavation and advanced test pits and groundwater monitoring wells to delineate the impacted area.

This Remedial Action Plan (RAP) is written to remediate gasoline-contaminated soil and groundwater in order to ascertain a "No Further Action" status by the NYSDEC utilizing excavation and/or non-intrusive oxidation chemical methods due to relevant analytical results identifying gasoline related contamination within soils and groundwater.

2.0 Field Activities

On Monday March 30 through Wednesday April 1 of 2009, CNS exposed the identified gasoline UST's and advanced a total of eleven test pits throughout the eastern and southern portions of the subject site in order to delineate the contamination plume. See Figure II: Test Pit Locations. During the advancement of test pits, the soil stratum consisted of concrete atop of RCA fill at shallow depths and fine to coarse sandy loam to the average depth of 10' below ground surface (bgs) and clay at the depths of 11' to 12' bgs. Saturated soil or groundwater was encountered within the borings at depths of 5' to 10' bgs.

The excavated soils were continuously screened throughout the project utilizing a Photo-Ionization Detector (PID) where borings logs were generated noting odors, physical characteristics and detectable VOC chemical constituents. The PID utilized throughout the project was calibrated using both fresh air calibration (zero point) and single sensor calibration (second point). Single sensor calibration was conducted by applying a known amount of reference gas to each sensor. PID readings ranged between 0.00 through 1,153 parts per million (ppm).

A total of eighteen soil samples were collected and analyzed via 8260 and 8270 for Volatile Organic Compounds (VOC's) and Semi-Volatile Organic Compounds (SVOC's) utilizing STARS protocols. As indicated in the table below, analytical results did not identify any SVOC's above the NYSDEC RSCO's. VOC's were identified consisting of Benzene and Xylene related constituents above the NYSDEC RSCO's within Test Pit numbers TP01, TP03, TP05, TP08 and TP10. See Appendix A: Test Pit - Laboratory Analytical Data Sheets.

In addition to the said collected soil samples, CNS collected additional waste characterization samples for disposal purposes. Analytical results identified the soils as non-hazardous petroleum material that can be disposed at a Class B recycling facility. See Appendix B: Waste Characterization - Laboratory Analytical Data Sheets.

Sampling Dates: 3/31/2009 - 4/1/2009							
Analyte	Contaminant	TP01-BE01A (5'6") (ppm)	TP03-BE03A (7'0") (ppm)	TP05-BE05A (7'0") (ppm)	TP08-BE10A (6'6") (ppm)	TP10-BE11A (7'6") (ppm)	NYSDEC GACM R404 RSCOs (ppm)

 ND = None Detected above laboratory's Minimum Detection Limit or Method of analysis and instrumentation
 *None Detected for EPA Recommended Soil Clean-up Objectives are highlighted in red
 TOTAL VOC's < 10 ppm
 TOTAL SVOC's < 500 ppm

From Tuesday May 5th through Thursday May 7th of 2009, CNS installed four groundwater-monitoring wells. The monitoring wells were installed by CNS utilizing a track-mounted hydraulic direct push geoprobe. Monitoring wells were constructed utilizing schedule 40 PVC tubing constructed with a six-foot screen to accommodate the identified shallow level groundwater aquifer at the depth of 3 through 9 feet bgs. Porous inert material was poured beneath and around the well screen then sealed with Bentonite to grade. See Figure III: Monitoring Well Locations.

On May 12, 2009 CNS collected groundwater samples from the installed wells and were analyzed via 8260 and 8270 for VOC's and SVOC's utilizing STARS protocols. As indicated in the table below, analytical results identified Benzene, Toluene and Xylene related constituents above the NYSDEC Groundwater Standards within all the sampled wells. See Appendix D: Monitoring Wells - Laboratory Analytical Data Sheets.

Sampling Date: 5/12/2009						
Analyte	Contaminant	MW-1	MW-2	MW-3	MW-4	NYSDEC TAGM #4046 GW Standards (ppb)
		(4' 8.5")	(4' 8.5")	(4' 8")	(4' 1")	
		ppb				
VOC	1,2,4 -Trimethybenzene	2200	160	1400	100	5
	1,3,5 -Trimethybenzene	870	66	440	35	5
	Ethylbenzene	610	7.6	190	18	5
	Isopropylbenzene	120	15	59	5	5
	m&p-Xylene	4300	76	1400	150	5

	p-Isopropyltoluene	69	3.3	20	2.3	5
	Total Xylenes	4800	100	1800	180	5
SVOC	Naphthalene	210	10	65	ND	10

Notes:

NYSDEC GW Standards = New York State Department of Environmental Conservation TAGM #4046 Groundwater Standards/Criteria
 ND = None Detected above laboratory's Minimum Detection Limit or Method of analysis and instrumentation
 Concentrations exceeding the NYS Groundwater Standards are highlighted in bold **BLACK**
 ppb = Parts per Billion

Based upon the findings of the Investigations, CNS developed this Remedial Action Plan to be submitted to the NYSDEC for approval.

3.0 Remediation

It is CNS's opinion that proper plume delineation is completed; observations of relevance made during the investigation consist of gasoline odors within the sandy loam saturated zone (3'-7' bgs) soil strata; however analytical results did not identify contaminants above the NYSDEC RSCO's, with exception to the immediate area around the identified UST's. Groundwater is identified at the depths of 4-9' bgs and no gasoline product or sheens were identified.

In order to effectively remediate the site CNS proposes to remove the UST's with immediate soils and to utilize chemical oxidizer injections, as the methods of remediation to properly and effectively remediate the groundwater to achieve a NYSDEC "no further action" status via analytical results. See Figure IV: Contamination Plume Location Plan.

3.1 Compliance

All work to be performed on site will comply with but is not limited to the following standards:

1. NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation.
2. NYSDEC Spill Technology and Remediation Series (STARS) #1 Petroleum Contaminated Soil Guidance Policy.
3. United States Environmental Protection Authority (USEPA) Technical Standards and Corrective Action Requirements for the Owners and Operators of Underground Storage Tanks (CFR Title 40, Part 280).
4. ASTM D 5092 Standard Practice for Design and Installation of Ground Water Monitoring Wells.
5. USEPA 542-R-98-008 In-Situ Remediation Technology: In-Situ Chemical Oxidation.
6. USEPA SW846 Test Methods for Evaluating Solid Waste, Physical/Chemical Methods

3.2 Underground Storage Tank Closure

The following procedures will be implemented and coordinated with the NYSDEC for the UST removal.

1. All product piping will be drained into the tank. The piping will then be removed.
2. All liquids and residues will be removed from USTs by using explosion proof or air driven pumps. Pump motors and suction hoses will be bonded to the tank or otherwise grounded to prevent electrostatic ignition hazards. It may be necessary to use a hand pump to remove the last few inches of liquid from the bottom of the tank. If a vacuum truck is used for removal of liquids or residues, the area of operation for the vacuum truck will be vapor-free. The truck will be located upwind from the tank and outside the path of probable vapor travel. The vacuum pump exhaust gases will be discharged through hose of adequate size and length downwind of the truck, tank, and building.
3. All fill pipes, return/feed lines and other non-product lines except the vent line will be removed. The vent line will remain connected until the tank is purged. All other tank openings will be temporarily plugged so that all vapors will exit through the vent line during vapor-freeing process.
4. All flammable vapors will be removed by one of the methods described below. These methods provide a means for temporary vapor freeing of the UST.
 - Flammable and combustible vapors may be purged with an inert gas such as carbon dioxide (CO₂) or nitrogen (N₂).
 - The vapors in the tank may be displaced by adding CO₂ to the tanks in an amount of at least 1.5 pounds per 100 gallons of tanks capacity.
 - Ventilation using an evacuator-type air mover usually driven by compressed air.
 - Ventilation with a diffused air blower.
5. The tank's atmosphere area will be regularly tested for flammable vapor concentrations until the tank is removed from the Site.
6. The tank's vapor space will be tested by placing the combustible gas indicator probe into the fill opening with the drop tube removed. Readings will be taken at the bottom, middle and upper portions of the tanks. The instrument shall be cleared after each reading. Readings of 10% or less of the lower flammable limits will be obtained before the tank is considered safe for removal from the ground. OSHA requires a lower flammable limit of 10% or less prior to removing the tank from the ground.
7. Following venting of the UST, the tanks will be cut open and cleaned of any residual petroleum by a confined space certified person. The tank will be removed from the Site as promptly as possible after vapor-freeing procedures have been completed.
8. The tank will be sent to a scrap dealer for recycling. Sufficient holes will be made in the tanks to render them unfit for reuse. A bill of sale will be used to transfer tank ownership.
9. All bottom sludge will be transferred to a vacuum truck and properly transported to a licensed disposal/treatment facility.

During removal of the UST's, CNS personnel will be on-site to field screen disturbed soils if applicable with a PID for the presence of petroleum contamination. If soils are encountered that exhibit PID readings greater than 5ppm, or exhibit petroleum odors, the material will be excavated and stockpiled separately. The material will be placed on and covered with 10-mil polyethylene sheeting.

CNS will collect compliance end-point samples from the tank walls, bed areas and a composite sample will be collected from the stockpile soils. All collected samples will be sent to the laboratory for analysis

under NYSDEC STARS protocols, as well as parameters required by the designated waste disposal facility. Once the laboratory results are available the proper disposal facility will be selected and the soil will be transported to the disposal facility in accordance with all local, state, and federal regulations. Non-hazardous regulated waste manifests will be prepared at the Site prior to transporting soils to the approved facility. The hauler will have all necessary permits and licenses to transport the material, including a NYSDEC 364 permit. All manifests will be signed at the facility to show receipt of the material.

3.3 Groundwater Remediation - Chemical Injection Application

CNS is seeking approval to inject a chemical oxidizer into the groundwater aquifer to remove any residual contaminants that may be above the NYSDEC RSCO's and Groundwater Standards. The oxidizer proposed by CNS is RegenOx® Remediation Products which effectively and rapidly destroys petroleum hydrocarbons in both soil and groundwater. The mechanisms by which RegenOx® operates are:

- Direct Oxidation: $C_2Cl_4 + 2 Na_2CO_3 + 3 H_2O_2 \rightarrow 2 H_2O + 2 CO_2 + 4 NaCl + 4 H_2O + 2 H_2CO_3$
- Free Radical Oxidation: Perhydroxyl Radical (HO_2^{\cdot}), Hydroxyl Radical (OH^{\cdot}), Superoxide Radical ($O_2^{\cdot-}$). Hydrocarbons have many H^+ that will be oxidized to H_2O .

RegenOx® has been approved by the NYSDEC and has been rigorously tested in both the laboratory and the field on petroleum hydrocarbons (aliphatics and aromatics), gasoline oxygenates (e.g., MTBE), polyaromatic hydrocarbons (e.g., naphthalene and phenanthrene) and chlorinated hydrocarbons (e.g., PCE, CE, TCA). See Appendix D: RegenOx® Product Information and Case Studies.

A Geoprobe™ with a Geoprobe™ GS2200 Injection machine will be used to inject the RegenOx® product. The RegenOx® application will be mixed within the GS2200 and injected into the subsurface at 1,850 psi through one-inch diameter injection rod which will achieve a 25'-diameter cone of influence. A total of 6,340 lbs of RegenOx® will be applied both within and around the contamination plume as per the manufacturer's specifications at three different vertical depths which will extend within and beyond the contamination plume over time. Note: another RegenOx® application may be required based upon progressive analytical results.

4.0 Quality Assurance / Quality Control

Appropriate Quality Assurance/Quality Control (QA/QC) procedures will be utilized during implementation of all field activities, including but not limited to use of disposable vinyl gloves during sampling. All equipment will be cleaned prior to the commencement of collecting each sample and at the end of each work day.

5.0 General Health & Safety Plan

All activities associated will be conducted in accordance with appropriate recognized Health and Safety procedures. A site specific HASP will be prepared to ensure the safety of site personnel during all phases of the RAP implementation.

6.0 Notification and Access

Written notification will be provided to the NYSDEC in the form of e-mail or letter at least one (1) week in advance of such activities, in order that the NYSDEC may be present.

7.0 Monitoring Plan

7.1 Sampling Process Design

Following is a brief summary of sample collection activities. CNS will mark out and install both upgradient and downgradient wells extending to 20' radial distances from the identified contamination. CNS will then extend subsurface borings utilizing the track mounted drill rig to depths of approximately 15 feet bgs. The wells will be purged and sampled by an experienced CNS sampling crew. Water level measurements will be collected periodically and synoptically in each of the wells to determine the direction of groundwater flow. Water level measurements and groundwater sampling procedures are provided in Section 10.0.

7.2 Logistics

Unencumbered access to the site with the soil removal equipment is expected to be available.

7.3 Soil Screening

All soil samples will be screened using a PID (11.7 eV lamp) and logged by a CNS personnel for geologic characteristics. All field equipment will be calibrated prior to use according to the manufacturer's instructions. The results of calibrations and any records of repair will be maintained in the field book. Equipment that fails calibration or fails to operate properly will be removed from service and segregated from the operational equipment. Such equipment will be repaired and re-calibrated if possible, or replaced. Preventive maintenance of field equipment is performed according to the procedures indicated in the manufacturer's manuals.

7.4 Sampling Methods Requirements

The CNS Project Manager will be responsible for ensuring that appropriate sample collection procedures are followed and will take appropriate actions to correct any identified deficiencies. All samples collected will be maintained under chain-of-custody and stored and shipped in laboratory-supplied coolers.

7.4.1 Groundwater

One-inch diameter monitoring wells will be installed. Based on the thickness of the perched water unit, it is anticipated that each well will consist of 10 feet of screen comparable to the existing monitoring wells. The top of each well casing will be surveyed to a common datum and tied into the existing monitoring well network. No monitoring wells will be installed in the sand below the confining layer. These borings will be grouted with bentonite slurry immediately after completion. A mill slot sampler with 3/8 inch polyethylene tubing and a peristaltic pump will be used to collect the groundwater samples. At the new monitoring well locations a soil boring will be drilled using a Geoprobe™ equipped with 2-inch diameter macro-core sampler, and soil samples will be collected continuously from grade to the water table or a depth of six feet, whichever is deeper. Once the appropriate depth is achieved a one-inch diameter PVC well point will be installed in the open borehole (one foot of 0.01 slot screen and solid riser). The annular space between the borehole and the well point will be backfilled with Morie sand to a depth of one foot above the top of the screen. A one-foot thick hydrated bentonite seal will be installed above the sand and the remainder of the annular space will be backfilled with native soils. Well points will be completed at grade with a small diameter flush-mount manhole and concrete seal.

As outlined within the groundwater sampling procedures provided in Section 10.0, CNS will measure water levels and collect groundwater samples from monitoring wells using low-flow sampling methods. Prior to sampling, each well will be purged a minimum of three casing volumes using a peristaltic pump with per-well dedicated tubing set in the middle of the well screen. This is performed to ensure representative samples from the formation surrounding the wells and to eliminate standing water in the wells. Temperature, pH, dissolved oxygen, turbidity and conductivity measurements will be collected and recorded after the removal of each casing volume. Well sampling logs will be prepared. A designated measuring point on the top of each well casing will be surveyed vertically to a common datum. It is anticipated that three rounds of water level data will be collected from the seven wells. The data will be presented in a table and groundwater elevation contour maps generated for each round. Groundwater samples will be analyzed for VOCs by EPA Method 8260 STARS protocols. Groundwater for VOCs analysis will be preserved by acidification to a pH of <2 using hydrochloric acid (HCl), cooled to 4°C, and maintained at this temperature until time of analysis. Immediately following collection of the samples, they will be placed in a cooler with "freezer-pats" in order to maintain sample integrity, all volatile sample bottles to be filled to capacity with no headspace for volatilization. If necessary to meet a maximum recommended holding time, the samples are to be shipped by overnight courier to the laboratory.

7.5 Sampling Equipment Decontamination

It is anticipated that dedicated sampling equipment will be used at all locations. However if not the case for some reason all sampling equipment will be cleaned between sampling locations to prevent cross contamination. All reusable sampling equipment that comes in contact with soil samples will be decontaminated prior to each sample by using the following steps:

1. Detergent (Alconox) solution wash
2. Potable water rinse
3. Detergent (Alconox) solution wash
4. Potable water rinse
5. Solvent rinse (methanol)
6. Deionized water rinse

7.6 Sample Handling and Custody Requirements

This section describes sample identification and chain-of-custody procedures that will be used for field activities. The purpose of these procedures is to ensure that the quality of samples is maintained during collection, transportation, storage, and analysis.

7.6.1 Sample Containers – Soil

The sample container, preservation, and holding time requirements for each sample matrix will meet the specified standards for analytical EPA Method 8260. The containers for the soil samples are 4 oz., wide mouth, straight-sided; flint glass jars (70mm neck finish) with Teflon lids. The holding time for VOCs in soils is 14 days. CNS has requested a normal turnaround time of 5-7 business days from the lab. All soil samples will be shipped the same day they are obtained to the analytical laboratory. The samples must be stored at or near 4°C and analyzed within specified holding times. The laboratory will meet the specifications for documentation, data reduction and reporting. The laboratory will follow all method specifications pertaining to sample holding times contained in the specific analytical method. Screening

analysis will be carried out using USEPA Method OLM04.0 and the analytical laboratory will adhere to required QA/QC procedures.

7.6.2 Sample Containers – Water

Groundwater samples will be analyzed by EPA Method 8260 STARS Protocols. The containers will be two 40 ml. VOA vials per sample. The holding time for VOCs is 14 days. All soil samples will be shipped the same day they are obtained to the analytical laboratory for VOC analysis. The laboratory will follow all method specifications pertaining to sample holding times contained in the specific analytical method. Screening analysis will be carried out using USEPA Method OLM04.0 and the analytical laboratory will adhere to required QA/QC procedures.

7.6.3 Sample Labels

A sample label will be attached to each sampling container prior to the sampling event. Information to be included on the label will include the following:

- Sample number
- Date and time of sample collection
- Initials of person collecting the sample
- Project number
- Type of preservative, if any.

Individual samples will be identified using a unique sample number that includes the prefix for a location code. Refer to the attached table for sample numbering.

7.6.4 Chain-of-Custody Record and Shipment

There will be no preservatives added in the field. All samples will be transferred to the appropriate sampling containers and placed into a chilled (4oC) transport container for shipment to the laboratory. The chilled transport containers (coolers) will be utilized for temporary storage of the samples. The laboratory will provide sampling containers and coolers. The shipping container used will be designed to prevent breakage, spills and contamination of the samples. Tight packing material is to be provided around each sample container and any void around the "freezer-pats". The container is to be securely sealed, clearly labeled, and accompanied by a COC record. Separate shipping containers should be used for "clean" samples and samples suspected of being heavily contaminated. During winter months, care should be taken to prevent samples from freezing. Sample bottles will not be placed directly on "freezerpacs". Chain-of-custody (COC) procedures will be followed from the time of sample collection to the conclusion of laboratory analysis.

Field COC procedures include:

- Label containers with sample location and sample information plus the intended analytical parameter(s). Date, time and sampler information will be written on the label in the field.
- Complete chain-of-custody forms for all samples en route to laboratory. Upon transferring samples to the laboratory sample custodian, designated staff will sign, date and note the time of transfer on the chain-of-custody form.
- Ship samples in ice chests sealed with custody seals, unless relinquished directly to a laboratory representative. The laboratory sample custodian confirms the integrity of the seals at the laboratory.

- Ensure that the samples are in possession or view of field staff or in secure storage at all times.
- Transport samples to the laboratory as soon as possible, observing appropriate preservation and holding-time requirements.

Upon receipt of the samples at the laboratory, the laboratory sample custodian will inventory the samples by comparing sample labels to those on the COC document. The custodian will enter the sample number into a laboratory tracking system by project code and sample designation. The custodian will assign a unique laboratory number to each sample and will be responsible for distributing the samples to the appropriate analyst or for storing samples in an appropriate secure area.

7.9 Analytical Methods

Soil and groundwater samples will be collected in accordance with USEPA "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846) and analyzed for VOCs in accordance NYSDEC STARS protocol utilizing USEPA Method 8260. All of the collected samples will be placed in laboratory-supplied glassware, packed in ice-filled coolers accompanied by chain-of-custody documentation and transported to a NYSDOH-certified laboratory.

7.10 Equipment Calibration and Maintenance Procedures

All field equipment will be calibrated prior to use according to the manufacturer's instructions. The results of calibrations and any records of repair will be maintained in the field book. Equipment that fails calibration or fails to operate properly will be removed from service and segregated from the operational equipment. Such equipment will be repaired and re-calibrated if possible, or replaced. Preventive maintenance of field equipment is performed according to the procedures indicated in the manufacturer's manuals. Laboratory analytical equipment and instruments will be calibrated in accordance with the laboratory's internal quality assurance/quality control (QA/QC) program.

7.11 Quality Control Samples

Duplicate aqueous samples will be collected analyzed to check laboratory reproducibility of analytical data. Duplicate samples will be collected at a frequency of at least 5% (one out of every 20 samples) of the total number of samples collected to evaluate the precision and reproducibility of the analytical methods. All duplicate samples will be submitted to the analytical laboratory as a "blind duplicate", having a fictitious sample identification name and time of sample collection. Each blind duplicate will be cross-referenced to document which real sample it is a duplicate of in the field notes and on the master sample log. Because soil sampling will be conducted, QC field samples proposed for this investigation are duplicates, matrix spike, and matrix spike duplicates. Laboratory QC will include calibration standards, laboratory control samples, reagent blanks, surrogate spikes, and laboratory duplicates.

8.0 Data Validation and Usability

All field data will be summarized and recorded in the project-specific field book. Descriptive data including soil types, field screening results and observations will be summarized in an appropriate format. The analytical laboratory will conduct necessary QC calculations that will be summarized in final laboratory reports. Copies of the analytical data will be provided to the NYSDEC for review. An electronic copy is desirable but paper copy is acceptable. All final laboratory reports will be included as an appendix or appendices to the final report. All analytical data will also be summarized in tabular form.

Analytical data will be assessed to ensure that they are of acceptable quality. This assessment will include a review of the following:

- Sampling dates
- Dates of analysis
- Requested analysis
- Chain-of-Custody documentation
- Sample preservation
- Holding times
- Method blanks
- Surrogate recoveries
- Laboratory duplicates
- Field duplicates
- Laboratory control samples
- Method reporting limits above requested levels
- Any additional comments or difficulties reported by the laboratory
- Overall laboratory assessment of data quality

Following data validation (if conducted) and reporting, all project-generated and compiled data and information will be reconciled with the project objectives to assess the overall success of sampling activities. This data assessment, including points of achievement and departure from project - specific objectives, will be discussed in the QA section of the final report.

9.0 Data Management and Reporting Plan

9.1 Data Presentation Formats

Project data will be presented in consistent formats for all letters, quarterly progress reports, interim technical reports, and draft/final technical reports. Specific formats will be tailored to best fit the needs of the data being presented but general specifications are described below.

9.2 Data Records

The data records will generally include one or more of the following:

- Unique sample or filed measurement code;
- Sampling or field measurement location and sample or measurement type;
- Sampling or field measurement raw data
- Laboratory analysis ID number;
- Property or component measured; and
- Result of analysis (e.g., concentration)

9.3 Tabular Displays

The following data may be presented in tabular displays:

- Unsorted (raw) data;
- Results for each constituent;
- Data reduction for statistical analysis;
- Sorting of data by potential stratification factors (e.g., location, depth, topography, etc); and
- Summary data.

9.4 Graphical Displays

The following data may be presented in graphical formats (e.g., bar graphs, line graphs, area or plan maps, isopleth plots, cross-sectional plots or transects, three dimensional graphs, etc.):

- Sample location and sampling grid;
- Boundaries of sampling area;
- Constituent concentrations at each sample location;
- Geographical extent of impacts;
- Constituent concentration levels,

10.0 Groundwater Monitoring: Sampling, Procedures & Protocols

The wells will be initially monitored and groundwater samples will be analyzed by a NYSDOH-certified laboratory and deliverables would conform to NYSDEC ASP Category B. As part of the reporting process, all data will be evaluated and recommendations for modifications in the frequency of sampling and number of wells to be sampled will be presented. Construction details for the monitoring wells are outlined in Section 3.0.

10.1 Groundwater Sampling Protocols

During each round of sampling, groundwater samples will be collected from the monitoring wells, using the low flow well sampling techniques described herein. Prior to a sampling round, water levels will be measured in all monitoring wells. These water level data will be collected on a single date, prior to the field sampling, and will be tabulated and used to compile groundwater contour maps. Three to five well casing volumes will be purged using a low flow submersible pump and disposable polyethylene tubing or by bailing. Field measurements of pH, specific conductance, and temperature will be collected and documented. Specific conductance, pH, and temperature will be measured, at a minimum, after each purged volume. Stabilization of these parameters +/- 10% from successive purged volumes indicates that the groundwater within the well is at or approaching equilibrium and the well can be subsequently sampled. A stainless steel, Teflon, PVC, or polyethylene bailer will be used to obtain the groundwater samples. Samples must be collected within three (3) hours of purging. All samples will be sent to the laboratory for analysis within 24 hours of sampling. The following standard protocol for groundwater sampling has been established to conform to NYSDEC rules and regulations. The standard methods for preparation, collection and transfer of groundwater samples, as well as record keeping, are detailed below. These methods must be followed to provide representative samples of chemical analysis. After collection of an acceptable sample in accordance with this protocol, the sample will be submitted to a NYSDOH ELAP certified laboratory. The preparation, collection, preservation, transfer and record keeping of each sample will be coordinated with the analytical laboratory to ensure reliable test results.

10.2 Sampling Periods

The wells will be monitored and the groundwater samples will be analyzed for EPA Method 8260 STARS protocols constituents by a NYSDOH-certified laboratory and deliverables would conform to NYSDEC ASP Category B. As part of the reporting process, all data will be evaluated and recommendations for modifications in the frequency of sampling and number of wells to be sampled will be presented.

10.3 Pre-Sampling Preparation/Equipment

- Health and Safety: The health and safety protocols for sample collection will conform to typical Level D industry standards.
- Authorized Personnel: All individuals involved in the sampling will have read this Plan, be technically qualified, and follow the protocol whenever groundwater samples are obtained.
- Staging: Prior to any sampling event, personnel will take the following steps responsible for sampling:
 1. Review the sampling procedures;
 2. Assemble and inspect field equipment necessary for sample collection, and verify that equipment is clean and in proper working order;
 3. Calibrate equipment to the manufacturer's specifications;
 4. Examine shuttles, bottles and preservatives. Contact the laboratory immediately if any problems are found or observed;
 5. Confirm sample delivery time and method of sample shipment with the laboratory;
 6. Establish a well purging and sampling schedule for the activities to be performed each day; and
 7. Establish a temporary staging area consisting of plastic sheeting.

10.4 Groundwater Level Measurement Procedures

- Clean all water-level measuring equipment (e.g., steel tape or water level indicator) using appropriate decontamination procedures.
- Remove locking well cap, note weather, time of day and date, etc. in field notebook, or on an appropriate form.
 1. Remove well casing cap.
 2. Measure the static water level in the well with a decontaminated steel tape or electronic water level indicator. The tape or water level indicator shall be rinsed with deionized water in between individual wells to prevent cross-contamination. Synoptic rounds of water level measurements shall all be completed in the same day.
 3. Measure distance from water surface to reference measuring point on well casing, and record in field notebook. (Note that the measurement is being taken from the established survey reference mark (notch) located at the top of the PVC riser pipe in each well.
 4. Measure total depth of well and record in field notebook or on log form. All water level measurements are to be recorded to the nearest 0.01-foot.
 5. Remove all down hole equipment, replace and secure well casing cap and locking protective caps.
 6. Calculate elevation of water: $EW = E - D$
Where:
EW = Elevation of water;
E = Elevation of point of measurement (i.e., survey reference point); and
D = Depth to water

10.5 Procedures for Well Purging

Well purging is necessary to obtain a sample representative of the groundwater in the formation and not standing/stagnant water in the well.

- Examination of the well
 1. Identify the well and record the well number of the field data sheet.
 2. Verify that the well is not damaged. Notify the Project Manager if well damage is obvious or suspected, so that the well can be repaired or replaced.
 3. Put on new disposable gloves.
 4. Carefully remove well cover to avoid entry of foreign material into well.
 5. If needed, the exterior and interior of the exposed protective well box should be wiped with clean filter paper (or equivalent) wetted with distilled water.
- Purging the Well
 1. Three to five casing volumes of water will be removed from the well prior to sampling with either a submersible pump and dedicated polyethylene tubing, or with a dedicated bailer, or properly decontaminated bailer (stainless steel, Teflon or PVC). The well volume is calculated using the following formula: $V = R^2 (H)(0.49)$

Where:
V = standing water volume, in gallons, to be purged
R = inside radius of well in inches
H = linear feet of standing water in the casing (total depth to groundwater)
0.49 = correction factor that includes conversion from inches to feet and assumes three well volumes will be purged

OR:
purge until water temperature, conductivity and pH stabilize (i.e., remain constant within 10% of each reading). If a well purges dry or is slow to recharge, only one well volume of water needs to be purged.
 2. Temperature, specific conductance, and pH will be measured during purging. At a minimum, measurements will be taken after each well volume purged.
 3. All purging and sampling equipment must be stored and transported in a manner that minimizes the possibility of accidental contamination.

10.6 Procedures for Record Keeping

The sampling team will record the following information regarding the well purging procedure in the field notebook and/or on a Groundwater Sampling Record/Field Observation Log.

- Day/date/time
- Weather conditions
- Air temperature
- Condition of the well (rusty, bent casing, etc.)
- Person(s) doing the purging
- Groundwater level prior to purging
- Depth to the bottom of the well
- Minimum volume of groundwater to be purged (3 well volumes)
- Chemical properties of evacuated water: temperature specific conductance, pH
- Method of purge water disposal
- Physical properties of evacuated water: Color, odor, turbidity, presence of sheen
- Volume of groundwater purged from the well.

The following field measurement procedures that discuss specific steps in the calibration and use of field instruments should be interpreted to reflect the manufacturer's recommended procedures for the actual instruments being utilized.

10.7 Procedures for the Measurement of Groundwater pH and Temperature

10.7.1 Calibration

1. Immerse the tip of the electrode in water overnight. If this is not possible due to field conditions, immerse the electrode tip in water for at least an hour before use.
2. Rinse the electrode with demineralized water.
3. Immerse the electrode in pH 7 buffer solution.
4. Adjust the temperature compensator to the proper temperature.
5. Adjust the pH meter to read 7.0.
6. Remove the electrode from the buffer and rinse with demineralized water.

10.7.2 Measurement

1. Collect a groundwater sample using either a stainless steel, Teflon or PVC bailer and pour a small amount of this sample into an extra sample jar that will not be used to store chemically analyzed samples.
2. Immerse the electrode into the extra sample jar. Do not immerse the electrode into a sample that will be analyzed by the laboratory.
3. Read and record the pH of the solution after adjusting the temperature compensator to the sample temperature.
4. Rinse the electrodes with demineralized water.
5. Keep the electrode immersed in demineralized water when not in use.
6. Record Results in the field notebook.

10.8 Procedure for the Measurement of Groundwater Specific Conductance

1. Immerse the electrode in water overnight. If this is not possible due to field conditions, immerse the electrode for at least an hour before use.
2. Rinse the cell with one or more portions of the sample to be tested.
3. Immerse the electrode in the sample and measure the conductivity.
4. Adjust the temperature setting to the sample temperature.
5. Record the results in the field notebook.

10.9 Procedures for Groundwater Sampling

1. The following procedure shall be used for monitoring well groundwater sampling:
2. Prepare for purging. Decontaminate bailer and discard rope. If a submersible pump is used, discard pump discharge line. If using a disposable bailer and dedicated rope, prepare new bailer and appropriate length of rope.
3. After purging, allow static water level to recover for ten minutes.
4. Obtain sample from well with either a stainless steel, Teflon, PVC or disposable bailer suspended on either a polypropylene monofilament or a stainless steel, coated-coated wire. The maximum time between purging and sampling will be three (3) hours.
5. Lower the bailer slowly to avoid degassing.
6. Collect samples by pouring bailers directly into sample bottles from bailers.
7. Place samples in cooler and chill to 4°C. Samples will be delivered to the designated laboratory within 24 hours.

8. Re-lock well cap.
9. Fill out field notebook, well sample log sheet, labels, custody seals and chain-of-custody forms.

10.10 Field Procedures Documentation

Data reporting practices will be followed carefully and data entries will be validated regularly to ensure that raw data are accurate. All the field data generated during field measurements, observations and field instrument calibrations, will be entered directly into a bound field notebook. One or more bound books will be maintained for the site, and each book will be consecutively numbered. The books will remain with the main project files. Copies will be made for the Project Manager and for the person who made the entries, if requested. All entries in the logbook will be made in ink. When a mistake is made in the log, it will be crossed out with a single ink line and will be initialed and dated. Special care will be taken in the description and documentation or sampling procedures. Sampling information to be documented in the field notebook and/or associated forms are as follows:

- Weather conditions;
- Sample number;
- Date and time of sample collection;
- Source of sample (well, trench, etc.);
- Purged well – type of equipment, purge volume, rate of purge, decontamination procedures and method of disposal;
- Location of sample – document with a site sketch and/or written description of the sampling location so that accurate re-sampling can be conducted if necessary;
- Sampling equipment (i.e. bailer);
- Analysis and QA/QC required;
- Filtering, if required;
- Field instrument calibration including date of calibration, standards used and their source, results of calibration and any corrective actions taken;
- Field data (pH, temperature, conductivity, etc.);
- Field observations – all significant observations will be documented;
- Sample condition (color, odor, turbidity, sheen, etc.);
- Site conditions;
- Sample shipping procedure, date, time, destination, and if legal seals were attached to transport container(s);
- Comments – Any observation or event that occurred that would be relevant to the site; for example weather changes and effect in sampling.

10.11 Corrective Action

If, during the course of sampling, it is determined that field procedures are not yielding representative groundwater samples, this Plan will be modified as required and reported to the Project Manager and the NYSDEC. Any alteration to field procedures will be included as an amendment to the Plan.

10.12 Selected Laboratory and Sample Analysis

Soil and groundwater samples will be analyzed by a NYSDOH-certified laboratory. After installation the well points will be allowed rest a minimum of twenty four hours prior to sampling to allow the point to equilibrate to surrounding pressures. These monitoring wells will be sampled and sent to the lab the same day to ensure accuracy. Soil sampling will be performed for the purpose of classifying soils and

determining the presence of groundwater. No soil samples will be submitted for laboratory analysis, although samples will be screened for volatile organics using a PID or equivalent.

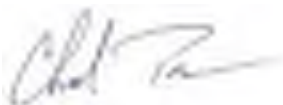

11.0 Implementation and Schedule

Field activities will commence within ten (10) days of authorization to proceed. We estimate the laboratory analysis will take approximately five (5) to seven (7) days, respectively. Reports will take approximately two (2) to four (4) weeks upon completion of site work.

12.0 Signatures

This Amended RAP was conducted and reported in accordance with industry-accepted practices, American Society for Testing and Materials (ASTM) Standard E1527-00 and E1903-97(2002), the New York State Department of Environmental Conservation's (NYSDEC) "*Spill Guidance Manual – Site Investigation Procedures*" and draft document "*DER-10 – Technical Guidance for Site Investigation and Remediation (12/02)*" and the United States Environmental Protection Authority's (USEPA) *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (SW-846)*.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

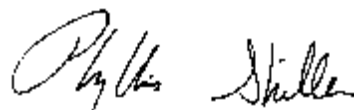

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

Corrosivity is based solely on the pH analysis performed above.

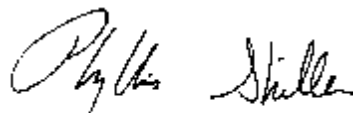

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

Elevated reporting limits for volatiles due to the presence of non-target compounds.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

ND=Not detected BDL=Below Detection Level RL=Reporting Level

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

**Petroleum hydrocarbon chromatogram was not a perfect match with any of the standards, but most closely resembles diesel fuel / fuel #2.

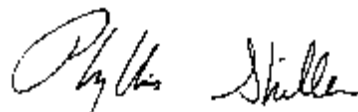

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

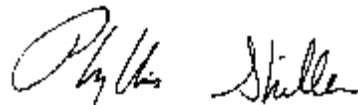

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

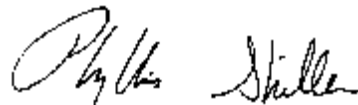

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

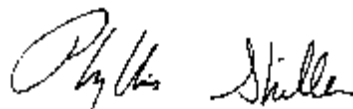

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

**Petroleum hydrocarbon chromatogram was not a perfect match with any of the standards, but most closely resembles diesel fuel / fuel #2.

Corrosivity is based solely on the pH analysis performed above.

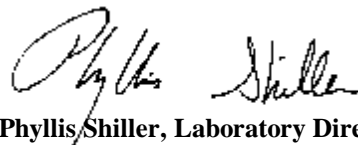

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

Elevated reporting limits for volatiles due to the presence of non-target compounds.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

ND=Not detected BDL=Below Detection Level RL=Reporting Level

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters.

Comments:

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide and Reactive Sulfide. This method is no longer listed in the current version of SW-846.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RegenOx® Product Information and Case Studies

RegenOx™

CHEMICAL OXIDATION REDEFINED...

RegenOx™ is an advanced in situ chemical oxidation technology designed to treat organic contaminants including high concentration source areas in the saturated and vadose zones*

PRODUCT FEATURES:

- Rapid and sustained oxidation of target compounds
- Easily applied with readily available equipment
- Destroys a broad range of contaminants
- More efficient than other solid oxidants
- Enhances subsequent bioremediation
- Avoids detrimental impacts to groundwater aquifers

RegenOx product application

HOW IT WORKS:

RegenOx maximizes in situ performance using a solid alkaline oxidant that employs a sodium percarbonate complex with a multi-part catalytic formula. The product is delivered as two parts that are combined and injected into the subsurface using common drilling or direct-push equipment. Once in the subsurface, the combined product produces an effective oxidation reaction comparable to that of Fenton's Reagent without a violent exothermic reaction. RegenOx safely, effectively and rapidly destroys a wide range of contaminants in both soil and groundwater (Table 1).

ACHIEVES RAPID OXIDATION VIA A NUMBER OF MECHANISMS

RegenOx directly oxidizes contaminants while its unique catalytic complex generates a suite of highly charged, oxidative free radicals that are responsible for the rapid destruction of contaminants. The mechanisms by which RegenOx operates are:

- **Surface-Mediated Oxidation:** (see Figure 1 and description below)
- **Direct Oxidation:** $C_2Cl_4 + 2 Na_2CO_3 + 3 H_2O_2 + 2 H_2O \leftrightarrow 2CO_2 + 4 NaCl + 4 H_2O + 2 H_2CO_3$
- **Free Radical Oxidation:**
 - Peroxy Radical ($HO_2\bullet$)
 - Hydroxyl Radical ($OH\bullet$)
 - Superoxide Radical ($O_2\bullet$)

Figure 1. Surface-Mediated Oxidation is responsible for the majority of RegenOx contaminant destruction. This process takes place in two stages. First, the RegenOx activator complex coats the subsurface. Second, the oxidizer complex and contaminant react with the activator complex surface destroying the contaminant.

Figure 1. RegenOx™ Surface-Mediated Oxidation

* Patent applied for

RegenOx™

From Mass Reduction to Bioremediation:

RegenOx™ is an effective and rapid contaminant mass reduction technology. A single injection will remove significant amounts of target contaminants from the subsurface. Strategies employing multiple Regenox injections coupled with follow-on accelerated bioremediation can be used to treat highly contaminated sites to regulatory closure. In fact, RegenOx was designed specifically to allow for a seamless transition to low-cost accelerated bioremediation using any of Regenesis controlled release compounds.

Significant Longevity:

RegenOx has been shown to destroy contaminants for periods of up to one month.

Product Application Made Safe and Easy:

RegenOx produces minimal heat and as with all oxidants proper health and safety procedures must be followed. The necessary safety guidance accompanies all shipments of RegenOx and additional resources are available on request. Through the use of readily available, highly mobile, direct-push equipment and an array of pumps, RegenOx has been designed to be as easy to install as other Regenesis products like ORC® and HRC®.

Effective on a Wide Range of Contaminants:

RegenOx has been rigorously tested in both the laboratory and the field on petroleum hydrocarbons (aliphatics and aromatics), gasoline oxygenates (e.g., MTBE and TAME), polyaromatic hydrocarbons (e.g., naphthalene and phenanthrene) and chlorinated hydrocarbons (e.g., PCE, TCE, TCA).

Oxidant Effectiveness vs. Contaminant Type:

Contaminant	RegenOx™	Fenton's Reagent	Permanganate	Persulfate	Activated Persulfate	Ozone
Petroleum Hydrocarbons	A	A	B	B	B	A
Benzene	A	A	D	B	B	A
MTBE	A	B	B	C	B	B
Phenols	A	A	B	C	B	A
Chlorinated Ethenes (PCE, TCE, DCE, VC)	A	A	A	B	A	A
Chlorinated Ethanes (TCA, DCA)	A	B	C	D	C	B
Polycyclic Aromatic Hydrocarbons (PAHs)	A	A	B	B	A	A
Polychlorinated Biphenyls (PCBs)	B	C	D	D	D	B
Explosives (RDX, HMX)	A	A	A	A	A	A

Based on laboratory kinetic data, thermodynamic calculations, and literature reports.

Oxidant Effectiveness Key:

- A = Short half life, low free energy (most energetically favored), most complete
- B = Intermediate half life, low free energy, intermediate degree of completion
- C = Intermediate half life, intermediate free energy, low degree of completion
- D = Long half life, high free energy (least favored), very low degree of completion

Regen OX – Part A (Oxidizer Complex)

Material Safety Data Sheet (MSDS)

Last Revised: November 7, 2005

Section 1 – Supplier Information and Material Identification

Supplier:

REGENESIS

1011 Calle Sombra
San Clemente, CA 92673
Telephone: 949.366.8000
Fax: 949.366.8090
E-mail: info@regenesis.com

Chemical Description: A mixture of sodium percarbonate [2Na₂CO₃·3H₂O₂], sodium carbonate [Na₂CO₃], sodium silicate and silica gel.

Chemical Family: Inorganic Chemicals

Trade Name: Regen Ox – Part A (Oxidizer Complex)

Product Use: Used to remediate contaminated soil and groundwater (environmental applications)

Section 2 – Chemical Information/Other Designations

<u>CAS No.</u>	<u>Chemical</u>
15630-89-4	Sodium Percarbonate
5968-11-6	Sodium Carbonate Monohydrate
1344-09-8	Silicic Acid, Sodium Salt, Sodium Silicate
63231-67-4	Silica Gel

Section 3 – Physical Data

Form: Powder

Color: White

Odor: Odorless

Melting Point: NA

Boiling Point: NA

Section 3 – Physical Data (cont)

Flammability/Flash Point:	NA
Vapor Pressure:	NA
Bulk Density:	0.9 – 1.2 g/cm ³
Solubility:	Min 14.5g/100g water @ 20 °C
Viscosity:	NA
pH (3% solution):	~ 10.5
Decomposition Temperature:	Self-accelerating decomposition with oxygen release starts at 50 °C.

Section 4 – Reactivity Data

Stability:	Stable under normal conditions
Conditions to Avoid/Incompatibility:	Acids, bases, salts of heavy metals, reducing agents, and flammable substances
Hazardous Decomposition Products:	Oxygen. Contamination with many substances will cause decomposition. The rate of decomposition increases with increasing temperature and may be very vigorous with rapid generation of oxygen and steam.

Section 5 – Regulations

TSCA Inventory Listed:	Yes
CERCLA Hazardous Substance (40 CFR Part 302)	
Listed Substance:	<i>No</i>
Unlisted Substance:	<i>Yes</i>
SARA, Title III, Sections 313 (40 CFR Part 372) – Toxic Chemical Release Reporting: Community Right-To-Know	
Extremely Hazardous Substance:	No
WHMIS Classification:	C, D2B
Canadian Domestic Substance List:	Appears

Section 6 – Protective Measures, Storage and Handling

Technical Protective Measures

- Storage:** Oxidizer. Store in a cool, well ventilated area away from all sources of ignition and out of the direct sunlight. Store in a dry location away from heat and in temperatures less than 40 °C.
- Keep away from incompatible materials and keep lids tightly closed. Do not store in improperly labeled containers.
- Protect from moisture. Do not store near combustible materials. Keep containers well sealed.
- Store separately from reducing materials. Avoid contamination which may lead to decomposition.
- Handling:** Avoid contact with eyes, skin and clothing. Use with adequate ventilation.
- Do not swallow. Avoid breathing vapors, mists or dust. Do not eat, drink or smoke in the work area.
- Label containers and keep them tightly closed when not in use.
- Wash hands thoroughly after handling.

Personal Protective Equipment (PPE)

- Engineering Controls:** General room ventilation is required if used indoors. Local exhaust ventilation, process enclosures or other engineering controls may be needed to maintain airborne levels below recommended exposure limits. Avoid creating dust or mists. Maintain adequate ventilation at all times. Do not use in confined areas. Keep levels below recommended exposure limits. To determine actual exposure limits, monitoring should be performed on a routine basis.
- Respiratory Protection:** For many conditions, no respiratory protection is necessary; however, in dusty or unknown conditions or when exposures exceed limit values a NIOSH approved respirator should be used.
- Hand Protection:** Wear chemical resistant gloves (neoprene, rubber, or PVC).

Section 6 – Protective Measures, Storage and Handling (cont)

Eye Protection:	Wear chemical safety goggles. A full face shield may be worn in lieu of safety goggles.
Skin Protection:	Try to avoid skin contact with this product. Chemical resistant gloves (neoprene, PVC or rubber) and protective clothing should be worn during use.
Other:	Eye wash station.
Protection Against Fire & Explosion:	Product is non-explosive. In case of fire, evacuate all non-essential personnel, wear protective clothing and a self-contained breathing apparatus, stay upwind of fire, and use water to spray cool fire-exposed containers.

Section 7 – Hazards Identification

Potential Health Effects

Inhalation:	Causes irritation to the respiratory tract. Symptoms may include coughing, shortness of breath, and irritations to mucous membranes, nose and throat.
Eye Contact:	Causes irritation, redness and pain.
Skin Contact:	Causes slight irritation.
Ingestion:	May be harmful if swallowed (vomiting and diarrhea).

Section 8 – Measures in Case of Accidents and Fire

After Spillage/Leakage:	Eliminate all ignition sources. Evacuate unprotected personnel and never exceed any occupational exposure limit. Shovel or sweep spilt material into plastic bags or vented containers for disposal. Do not return spilled or contaminated material to the inventory.
Extinguishing Media:	Water
First Aid	
Eye Contact:	Flush eyes with running water for at least 15 minutes with eyelids held open. Seek a specialist.
Inhalation:	Remove affected person to fresh air. Seek medical attention if the effects persist.
Ingestion:	If the individual is conscious and not convulsing, give two-four cups of water to dilute the chemical and seek medical attention immediately. Do Not induce vomiting.

Section 8 – Measures in Case of Accidents and Fire (cont)

Skin Contact: Wash affected areas with soap and a mild detergent and large amounts of water.

Section 9 – Accidental Release Measures

Precautions:

Cleanup Methods: Shovel or sweep spilt material into plastic bags or vented containers for disposal. Do not return spilled or contaminated material to the inventory.

Section 10 – Information on Toxicology

Toxicity Data

LD50 Oral (rat): 2,400 mg/kg
LD50 Dermal (rabbit): Min 2,000 mg/kg
LD50 Inhalation (rat): Min 4,580 mg/kg

Section 11 – Information on Ecology

Ecology Data

Ecotoxicological Information: NA

Section 12 – Disposal Considerations

Waste Disposal Method

Waste Treatment: Dispose of in an approved waste facility operated by an authorized contactor in compliance with local regulations.

Package (Pail) Treatment: The empty and clean containers are to be recycled or disposed of in conformity with local regulations.

Section 13 – Shipping/Transport Information

D.O.T. Shipping Name:	Oxidizing Solid, N.O.S. [A mixture of sodium percarbonate [2Na ₂ CO ₃ ·3H ₂ O ₂], sodium carbonate [Na ₂ CO ₃], sodium silicate and silica gel.]
UN Number:	1479
Hazard Class:	5.1
Labels:	5.1 (Oxidizer)
Packaging Group:	III

Section 14 – Other Information

HMIS[®] Rating	Health – 1 (slight)	Reactivity – 1 (slight)
	Flammability – 0 (none)	Lab PPE – goggles, gloves, and lab coat

HMIS[®] is a registered trademark of the National Painting and Coating Association.

Section 15 – Further Information

The information contained in this document is the best available to the supplier at the time of writing, but is provided without warranty of any kind. Some possible hazards have been determined by analogy to similar classes of material. The items in this document are subject to change and clarification as more information become available. This document is intended only as a guide to the appropriate precautionary handling of the material by a properly trained person. Individuals receiving this information must exercise their independent judgment in determining its appropriateness for a particular purpose.

Regen OX – Part B (Activator Complex)

Material Safety Data Sheet (MSDS)

Last Revised: November 7, 2005

Section 1 – Supplier Information and Material Identification

Supplier:

1011 Calle Sombra
San Clemente, CA 92673
Telephone: 949.366.8000
Fax: 949.366.8090
E-mail: info@regenesis.com

Chemical Description: A mixture of sodium silicate solution, silica gel and ferrous sulfate

Chemical Family: Inorganic Chemicals

Trade Name: Regen Ox – Part B (Activator Complex)

Product Use: Used for environmental remediation of contaminated soils and groundwater

Section 2 – Chemical Information/Other Designations

<u>CAS No.</u>	<u>Chemical</u>
1344-09-8	Silicic Acid, Sodium Salt, Sodium Silicate
63231-67-4	Silica Gel
7720-78-7	Ferrous Sulfate
7732-18-5	Water

Section 3 – Physical Data

Form: Liquid

Color: Blue/Green

Odor: Odorless

Melting Point: NA

Boiling Point: NA

Flammability/Flash Point: NA

Vapor Pressure: NA

Section 3 – Physical Data (cont)

Specific Gravity	1.39 g/cm ³
Solubility:	Miscible
Viscosity:	NA
pH (3% solution):	11
Hazardous Decomposition Products:	Oxides of carbon and silicon may be formed when heated to decomposition.

Section 4 – Reactivity Data

Stability:	Stable under normal conditions.
Conditions to Avoid:	None.
Incompatibility:	Avoid hydrogen fluoride, fluorine, oxygen difluoride, chlorine trifluoride, strong acids, strong bases, oxidizers, aluminum, fiberglass, copper, brass, zinc, and galvanized containers.

Section 5 – Regulations

TSCA Inventory Listed:	Yes
CERCLA Hazardous Substance (40 CFR Part 302)	
Listed Substance:	<i>No</i>
Unlisted Substance:	<i>Yes</i>
SARA, Title III, Sections 302/303 (40 CFR Part 355) – Emergency Planning and Notification	
Extremely Hazardous Substance:	No
SARA, Title III, Sections 311/312 (40 CFR Part 370) – Hazardous Chemical Reporting: Community Right-To-Know	
Hazard Category:	Acute
SARA, Title III, Sections 313 (40 CFR Part 372) – Toxic Chemical Release Reporting: Community Right-To-Know	
Extremely Hazardous Substance:	No

Section 6 – Protective Measures, Storage and Handling

Technical Protective Measures

Storage: Keep in a tightly closed container (steel or plastic) and store in a cool, well ventilated area away from all incompatible materials (acids, reactive metals, and ammonium salts). Store in a dry location away from heat and in temperatures less than 24 °C. Do not store in aluminum, fiberglass, copper, brass, zinc or galvanized containers.

Handling: Avoid contact with eyes, skin and clothing. Avoid breathing spray mist. Use with adequate ventilation.
Do not use product if it is brownish-yellow in color.

Personal Protective Equipment (PPE)

Engineering Controls: General room ventilation is required if used indoors. Local exhaust ventilation, process enclosures or other engineering controls may be needed to maintain airborne levels below recommended exposure limits. Safety shower and eyewash station should be within direct access.

Respiratory Protection: Use NIOSH-approved dust and mist respirator where spray mist exists. Respirators should be used in accordance with 29 CFR 1910.134.

Hand Protection: Wear chemical resistant gloves.

Eye Protection: Wear chemical safety goggles. A full face shield may be worn in lieu of safety goggles.

Skin Protection: Try to avoid skin contact with this product. Gloves and protective clothing should be worn during use.

Other:

Protection Against Fire & Explosion: Product is non-explosive and non-combustible.

Section 7 – Hazards Identification

Potential Health Effects

Inhalation:	Causes irritation to the respiratory tract. Symptoms may include coughing, shortness of breath, and irritations to mucous membranes, nose and throat.
Eye Contact:	Causes irritation, redness and pain.
Skin Contact:	Causes irritation. Symptoms include redness, itching and pain.
Ingestion:	May cause irritation to mouth, esophagus, and stomach.

Section 8 – Measures in Case of Accidents and Fire

After Spillage/Leakage (small):	Mop up and neutralize liquid, then discharge to sewer in accordance with local, state and federal regulations.
After Spillage/Leakage (large):	Keep unnecessary personnel away; isolate hazard area and do not allow entrance into the affected area. Do not touch or walk through spilled material. Stop leak if possible without risking injury. Prevent runoff from entering into storm sewers and ditches that lead to natural waterways. Isolate the material if at all possible. Sand or earth may be used to contain the spill. If containment is not possible, neutralize the contaminated area and flush with large quantities of water.
Extinguishing Media:	Material is compatible with all extinguishing media.
Further Information:	
First Aid	
Eye Contact:	Flush eyes with running water for at least 15 minutes with eyelids held open. Seek a specialist.
Inhalation:	Remove affected person to fresh air. Give artificial respiration if individual is not breathing. If breathing is difficult, give oxygen. Seek medical attention if the effects persist.
Ingestion:	If the individual is conscious and not convulsing, give two-four cups of water to dilute the chemical and seek medical attention immediately. <u>DO NOT</u> induce vomiting.
Skin Contact:	Wash affected areas with soap and a mild detergent and large amounts of water. Remove contaminated clothing and shoes.

Section 9 – Accidental Release Measures

Precautions:

PPE: Wear chemical goggles, body-covering protective clothing, chemical resistant gloves, and rubber boots (see Section 6).

Environmental Hazards: Sinks and mixes with water. High pH of this material may be harmful to aquatic life. Only water will evaporate from a spill of this material.

Cleanup Methods: Pick-up and place in an appropriate container for reclamation or disposal. US regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities.

Section 10 – Information on Toxicology

Toxicity Data

Sodium Silicate: When tested for primary eye irritation potential according to OECD Guidelines, Section 405, a similar sodium silicate solution produced corneal, iridal and conjunctival irritation. Some eye irritation was still present 14 days after treatment, although the average primary irritation score has declined from 29.7 after 1 day to 4.0 after 14 days. When tested for primary skin irritation potential, a similar sodium silicate solution produced irritation with a primary irritation index of 3 to abraded skin and 0 to intact skin. Human experience confirms that irritation occurs when sodium silicates get on clothes at the collar, cuffs, or other areas where abrasion may exist.

The acute oral toxicity of this product has not been tested.

Ferrous Sulfate: LD50 Oral (rat): 319 mg/kg not a suspected carcinogen.

Section 11 – Information on Ecology

Ecology Data

Ecotoxicological Information: Based on 100% solid sodium silicate, a 96 hour median tolerance for fish of 2,320 mg/l; a 96 hour median tolerance for water fleas of 247 mg/L; a 96 hour median tolerance for snail eggs of 632 mg/L; and a 96 hour median tolerance for Amphipoda of 160 mg/L.

Section 12 – Disposal Considerations

Waste Disposal Method

Waste Treatment: Neutralize and landfill solids in an approved waste facility operated by an authorized contactor in compliance with local regulations.

Package (Pail) Treatment: The empty and clean containers are to be recycled or disposed of in conformity with local regulations.

Section 13 – Shipping/Transport Information

D.O.T. This product is not regulated as a hazardous material so there are no restrictions.

Section 14 – Other Information

HMIS[®] Rating	Health – 2 (moderate)	Reactivity – 0 (none)
	Flammability – 0 (none)	Lab PPE – goggles, gloves, and lab coat
	Contact – 1 (slight)	

HMIS[®] is a registered trademark of the National Painting and Coating Association.

Section 15 – Further Information

The information contained in this document is the best available to the supplier at the time of writing, but is provided without warranty of any kind. Some possible hazards have been determined by analogy to similar classes of material. The items in this document are subject to change and clarification as more information become available. This document is intended only as a guide to the appropriate precautionary handling of the material by a properly trained person. Individuals receiving this information must exercise their independent judgment in determining its appropriateness for a particular purpose.

RegenOx™

Advanced Chemical Oxidation

Excavation Application

Purpose: Describe the preferred protocol for excavation application of RegenOx

RegenOx™ is a two-part product. Part-A (the oxidizer complex) and Part-B (the activator complex) each are separately packaged in easy-to-handle pails. Part-A and Part-B can be mixed together without concern of excess heat or gas generation. RegenOx does not require special injection tools or patented injection processes. For source contaminant treatment in the saturated zone, RegenOx is typically pumped into the subsurface using easily-obtainable equipment standard to the remediation contracting and drilling industry. However, when treating source contamination in the vadose zone, RegenOx can be used in conjunction with an excavation removal treatment. RegenOx can be applied into the excavation pit to extend source contamination removal from the saturated zone and laterally from the excavation walls into the vadose zone.

RegenOx application into an excavation pit is typically done by adding RegenOx with no amendments. First, all personnel within the exclusion zone of the excavation application should have proper Personal Protection Equipment (PPE; Figure 1*). They should have PPE to protect eyes, respiratory system and skin. Second, the recommended dose of Part-B Activator Gel should be re-suspended/mixed in the shipping container (Figure 1) and then added to the excavation pit. Care should be taken not to splash the product out of the pit or on personnel. The Part-B should be distributed evenly and mixed into the soil as well as possible. Third, the recommended dose of Part-A Oxidizer powder should be added to the excavation pit. Care should be taken to avoid fugitive dust emissions or depositing on personnel. The Part-A should be distributed evenly and mixed into the soil. To farther distribute the RegenOx throughout the treatment area water should be added until standing (saturated). As a final step, clean backfill can be added to the excavation pit.

Figure 1: Proper PPE for Application of RegenOx

Photos from a RegenOx excavation application are shown on the following page. RegenOx was added to the pit by using a front end loader (Figure 2) and the excavation was filled with clean backfill (Figure 3).

REGENESIS

RegenOx™ Field Demonstration

In-Situ Chemical Oxidation at a Retail Gas Station

RegenOx incorporates a solid alkaline oxidant built around a sodium percarbonate complex which is activated using a multi-part catalytic formula to maximize in situ performance. The product is delivered as two parts that are combined and injected into the subsurface using common drilling or direct-push equipment. Once in the subsurface, the combined product produces an effective oxidation reaction comparable to that of Fenton’s Reagent yet without a violent exothermic hazard. As a result of this reaction RegenOx safely, effectively and rapidly destroys a wide range of contaminants in both soil and groundwater.

SITE SUMMARY

Petroleum hydrocarbons had leaked from a pumping island and three underground storage tanks (USTs) at a gasoline service station in Vermont. The USTs were removed and further investigations revealed high levels of subsurface petroleum hydrocarbon contamination. In 2000 mass removal technology pilot tests were performed at the site. Based on the results, multi-phase extraction (MPE) was chosen for full-scale application and the system was implemented in 2001. By 2004 the MPE had run its course as the mass removal rates of petroleum-related volatile organic compounds (VOCs) had decreased to asymptotic levels. A new approach utilizing chemical oxidation was sought. In August 2004, RegenOx was pilot tested in a 12-point injection grid around well MW-19. An additional well, MW-21, was installed prior to injection in order to sample the results upgradient of MW-19. A second, planned pilot-injection of RegenOx was applied about 30 days later.

REMEDIATION APPROACH

- **Remediation Objective:** Reduce concentrations of BTEX and naphthalene within the pilot test area.
- **Application Type:** Pilot Scale Grid Injection
- **Product:** RegenOx
- **Quantity Applied:** Injection 1: 475 lbs RegenOx Oxidant, 200 lbs RegenOx Activator
Injection 2: 725 lbs RegenOx Oxidant, 450 lbs RegenOx Activator
- **Application Rate:** 13 lbs/ft
- **Injection Spacing:** 8 ft on-center

SITE CHARACTERISTICS

General

- **Name:** Quarry Hill Quick Stop
- **Location:** Barre, VT
- **Industry:** Gas Station
- **Contaminants of Concern:** See Table 1

Hydrogeology

- **Treatment Area:** 600 ft²
- **Soil Type:** Fine sand and silt
- **Groundwater Velocity:** 0.3 ft/day
- **Groundwater Flow Direction:** Northeast
- **Depth to Groundwater:** 10 ft

Table 1. Well MW-19 CoCs

Contaminant	Concentration
Benzene	68.6 ug/L
Toluene	50.5 ug/L
Ethylbenzene	297 ug/L
Xylenes	365.3 ug/L
Naphthalene	84.8 ug/L

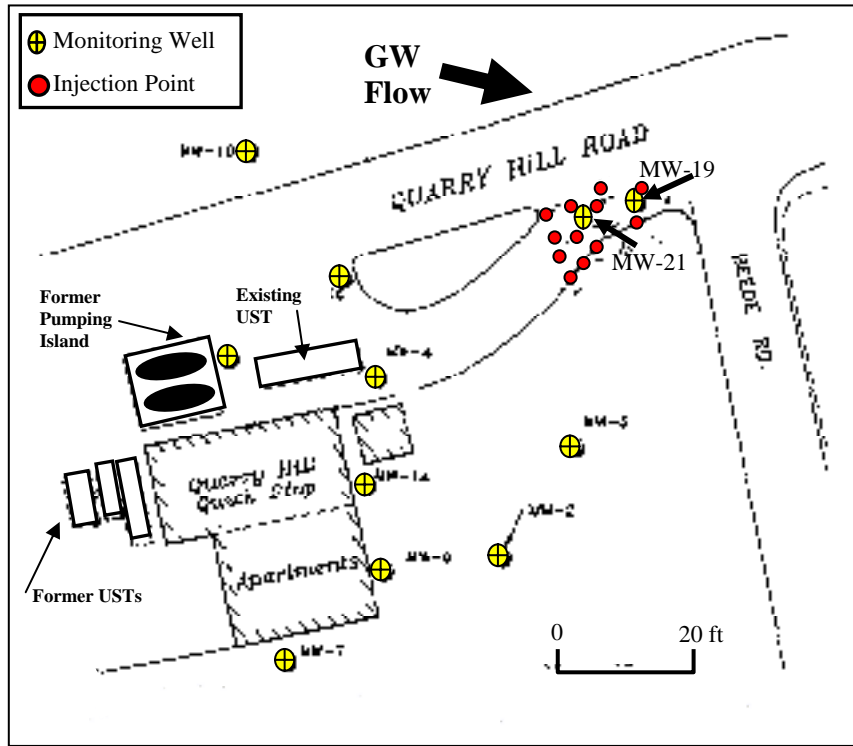

Figure 1. Site Map with RegenOx Injection points around well MW-19 and MW-21

RESULTS

Concentrations vs. Time

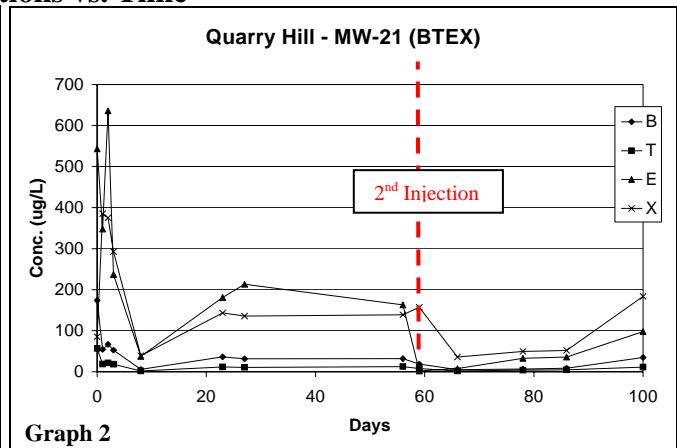

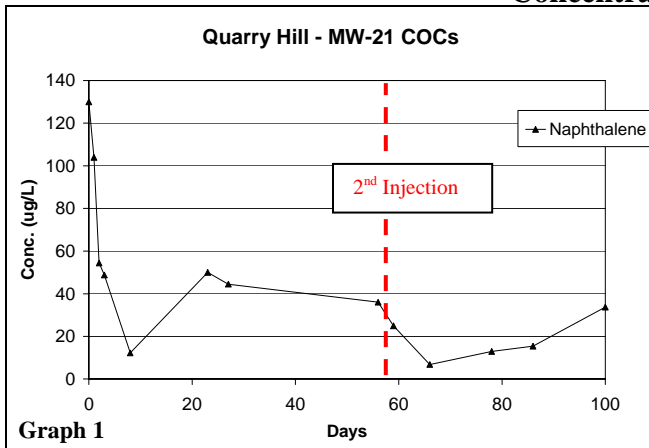

Table 2. Application Results – MW-21 (ug/L)

Contaminant	Baseline	48 Hrs	72 Hrs	1 Week	4 Weeks	8 Weeks	12 Weeks	% Reduction
Benzene	174	66.5	52.4	5.7	31.6	31.7	34.6	80%
Toluene	56.8	21.2	18.2	2	10.7	12.6	11.3	80%
Ethylbenzene	543	636	237	37.4	213	163	97.6	82%
Xylenes	85.3	375	293	38.9	135.7	138.7	183.5	increase
Naphthalene	130	54.4	48.8	12.2	44.5	36	33.7	74%

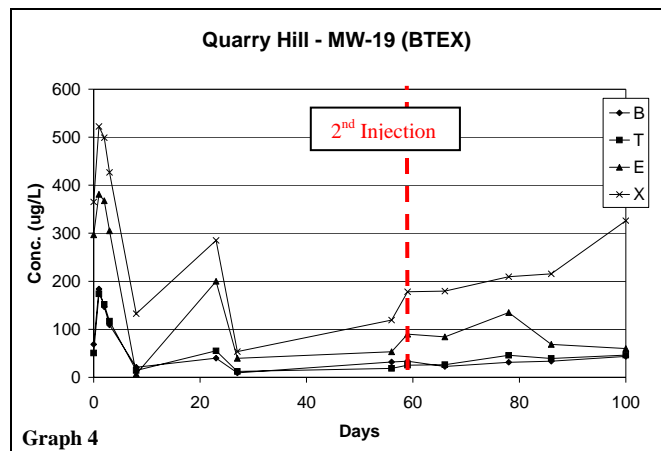

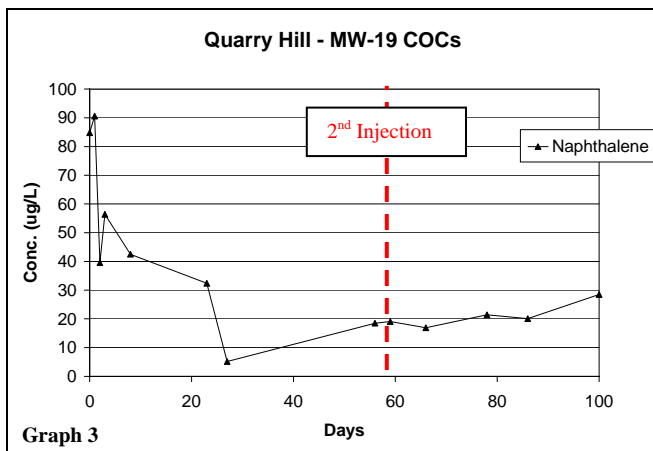

Table 3. Application Results – MW-19 (ug/L)

Contaminant	Baseline	48 Hrs	72 Hrs	1 Week	4 Weeks	8 Weeks	14 Weeks	% Reduction
Benzene	68.6	147	169	20.9	9.2	31.7	43.6	36%
Toluene	50.5	152	117	14	12.2	18.5	46.2	8%
Ethylbenzene	297	368	305	6.9	39.5	53.2	59.8	79%
Xylenes	365.3	499.2	426.7	132.5	53.7	119.1	326.2	10%
Naphthalene	84.8	39.6	56.4	42.5	5.2	18.5	28.5	66%

CONCLUSION

The pilot test was designed for multiple injections of RegenOx in order to reduce contaminant mass. Two injections have been conducted thus far. Oxidation of contaminants in the dissolved phase within the injection area occurred immediately (based on MW-21 and after 1 week, results showed 97% removal of benzene, 97% removal of toluene, 94% removal of ethylbenzene and 63% removal of naphthalene). Xylenes seemed to be the BTEX component with the most persistence. As to be expected, gradual rebound followed suit as the RegenOx oxidants were consumed and as soil bound contaminants dissolved. Soil samples will be collected to confirm total mass removal.

RegenOx Treats Mixed Chlorinated Solvent and Hydrocarbon Plume

REGENOX™ CHEMICAL OXIDATION TREATMENT

RegenOx uses a solid alkaline oxidant containing sodium percarbonate complex which is activated using a multi-part catalytic formula to maximize in situ performance. The product is delivered as two parts that are combined and injected into the subsurface using common drilling or direct-push equipment. Once in the subsurface, the combined product produces an effective oxidation reaction comparable to that of Fenton’s Reagent yet without a violent exothermic hazard. As a result of this reaction RegenOx safely, effectively and rapidly destroys a wide range of contaminants in both soil and groundwater.

SITE SUMMARY

Groundwater beneath a chemical distribution facility was contaminated with toluene, ethyl benzene, xylenes, vinyl chloride, cis-1,2-dichloroethene, perchloroethene and methyl isobutyl ketone (MIBK). RegenOx was selected to quickly reduce contaminant concentrations in the mixed chlorinated solvent and hydrocarbon plume. Two RegenOx direct-push applications occurred in August and September of 2005.

REMEDIATION APPROACH

Remediation Objective: Reduce concentrations of toluene, ethyl benzene, xylenes, PCE, VC, cis-DCE, toluene and methyl isobutyl ketone (MIBK)

- **Application Type:** Injection point grid application
- **Product:** RegenOx
- **Quantity Applied:** 1st application: 1890 lbs. RegenOx
2nd application: 1500 lbs. RegenOx
- **Application Rate:** 20-30 lbs./ft.
- **Injection Spacing:** 6 ft. on-center

Figure 1. On-Site Direct Push Injection

SITE CHARACTERISTICS

General

- **Name:** Confidential
- **Location:** Alberta
- **Industry:** Chemical Distribution Facility

Hydrogeology

- **Treatment Area:** 2500 ft²
- **Soil Type:** Clay
- **Groundwater Velocity:** ~ 0 ft./day
- **Depth to Groundwater:** 5 ft.

Figure 2. Site Layout Photo

RESULTS

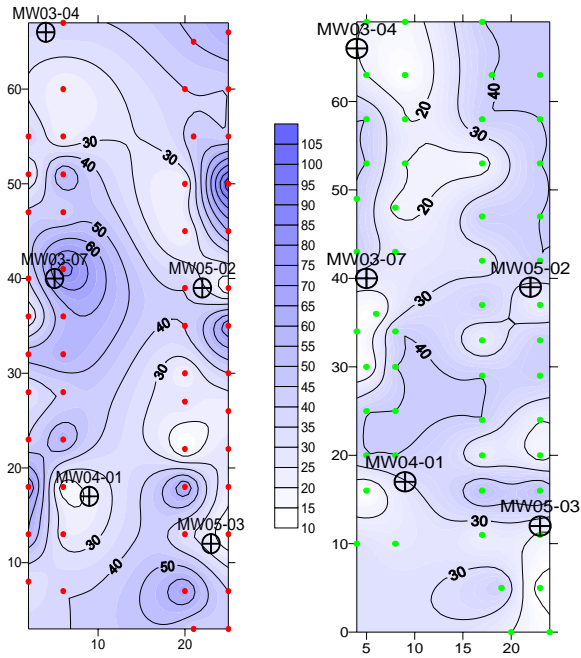

Figure 3. Distribution of RegenOx in heterogeneous subsurface (relative units): 1st injection (left) and 2nd injection (right)

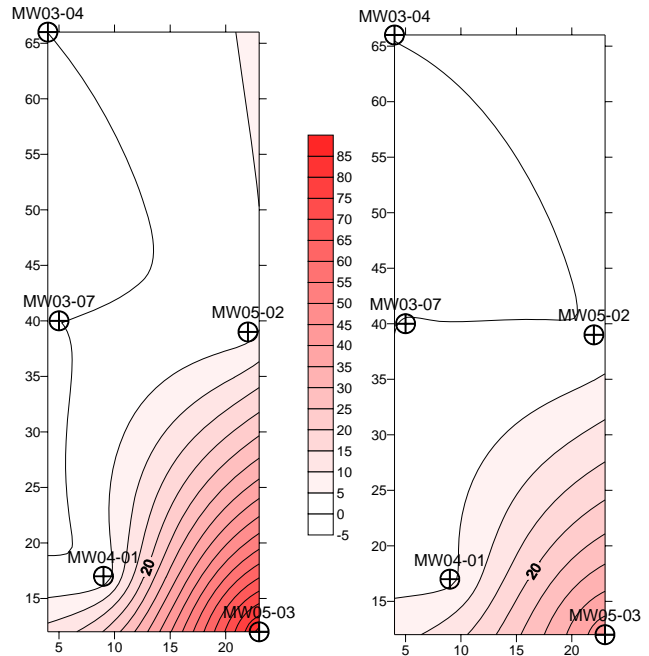

Figure 4. Toluene concentrations (mg/L) pre-injection July 2005 (left) and post-injection Oct 2005 (right)

Figure 5. Ethyl benzene concentrations (mg/L) pre-injection July 2005 (left) and post-injection Oct 2005 (right)

Figure 6. Vinyl chloride concentrations (mg/L) pre-injection July 2005 (left) and post-injection Oct 2005 (right)

Table 2. Contaminant Reduction with RegenOx in MW 05-03

Analyte (mg/L)	Pre-RegenOx	Post-RegenOx	% Reduction
Toluene	87	44	50
Ethyl Benzene	2.7	0.91	66
Xylenes	15	5.8	61
Vinyl Chloride	20	1.2	94
Cis 1,2-dichloroethene	25	9.2	63
Tetrachloroethene	.054	.013	76
Methyl Isobutyl Ketone	240	53	78

CONCLUSION

Since RegenOx was injected into a clay formation, the application rates varied across the site. Figure 3 shows the RegenOx product distribution based on the injection volumes. Some areas of the formation were able to accept more RegenOx (shown in dark blue) than other areas (shown in white).

Significant contaminant reductions were observed across the site, with vinyl chloride (Figure 6) and MIBK showing the largest percent reductions. In the most contaminated well, MW05-03, contaminant reductions ranged from 24-90% after the first application round. RegenOx application to an expanded treatment area is planned January 2006. Over a short period of 3 months, RegenOx effectively degraded a mixed plume containing chlorinated solvents, BTEX contaminants and MIBK.

RegenOx Treats High TPH Concentrations

REGENOX CHEMICAL TREATMENT

RegenOx uses a solid alkaline oxidant containing sodium percarbonate complex which is activated using a multi-part catalytic formula to maximize in situ performance. The product is delivered as two parts that are combined and injected into the subsurface using common drilling or direct-push equipment. Once in the subsurface, the combined product produces an effective oxidation reaction comparable to that of Fenton’s Reagent yet without a violent exothermic hazard. As a result of this reaction RegenOx safely, effectively and rapidly destroys a wide range of contaminants in both soil and groundwater.

SITE SUMMARY

TPH contamination in soil occurred as a result of a heating oil spill from a fuel oil boiler at a site in the U.K. Soil concentrations of total petroleum hydrocarbons (TPH) had reached more than 27,000 mg/kg beneath the building onsite. Remediation was required; however, excavation could not be done due to the nature of the building structure. RegenOx was applied to the contaminated soil in August 2005 by using hand-dug trenches and a follow-up round of sampling was completed 4 weeks after the RegenOx application.

REMEDIATION APPROACH

Remediation Objective: Reduce concentrations of TPH within the source area.

- **Application Type:** Trench application
- **Product:** RegenOx
- **Quantity Applied:** 2100 lbs RegenOx Oxidant
2100 lbs RegenOx Activator
- **Product Cost:** \$10,500

Table 1. Highest TPH Concentrations Onsite

Soil Sample	TPM Concentration
B016	27,300 mg/kg
B011	14,700 mg/kg
B021	6,950 mg/kg

SITE CHARACTERISTICS

General

- **Name:** Domestic Property
- **Location:** Morayshire, UK
- **Industry:** Residential

Hydrogeology

- **Treatment Area:** 645 ft²
- **Soil Type:** Alluvium (silty-sand and gravel)

Figure 1. Cottage with fuel oil spill

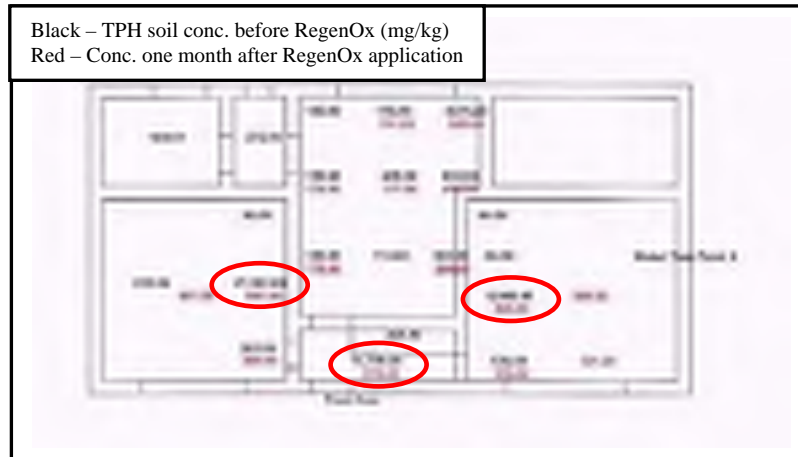

Figure 2. Site map

Figure 3. Interior of cottage

Figure 4. Digging trenches

Figure 5. RegenOx Part A (oxidant)

Figure 6. RegenOx Part B (activator)

RESULTS

Table 2. TPH Reduction Using RegenOx

<i>Sample</i>	<i>Pre- RegenOx (mg/kg)</i>	<i>Post- RegenOx (mg/kg)</i>	<i>Reduction</i>
B001	5,376	568	89%
B002	176	161	9%
B004	833	474	43%
B005	409	177	57%
B006	159	175	-10%
B007	903	596	34%
B009	189	178	6%
B011	14,700	570	96%
B016	27,300	981	96%
B017	362	284	22%
B019	536	330	38%
B021	6,950	360	95%
Average	4,824	405	92%

CONCLUSION

RegenOx application was targeted to areas of highest visual contamination where the greatest contaminant reduction was necessary in advance of a vapor barrier installation. Reductions were seen in almost all soil samples with the exception of B006, a sample that previously contained low concentrations and where RegenOx application was minimal. Among the high concentration samples where RegenOx application was higher, a reduction of at least 95% was observed within one month of the RegenOx application. Overall, an average TPH reduction of 92% was measured. Upon entering the building for the post application sampling, field personnel noted that for the first time there was no strong smell of fuel oil. Following this treatment, the regulators have required no further remedial action. RegenOx proved to be an inexpensive, effective remediation strategy and required no special equipment.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>HUDSON RIVER PCBS</i>	<i>NO STREET APPLICABLE</i>	<i>WNW 1/8 - 1/4 (0.248 mi.)</i>	<i>0</i>	<i>15</i>

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 12/17/2013 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	WNW 1/8 - 1/4 (0.248 mi.)	0	15

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/17/2013 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/13/2013 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/17/2014 has revealed that there are 62 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 12/30/2013 has revealed that there are 14 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 11/13/2013 has revealed that there is 1 NY VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 09/24/2013 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 13 NY HIST UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/19/2013 has revealed that there are 28 NY Spills sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/10/2013 has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 12/31/2013 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 10 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 17 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

DEC Memo: Sangesland spoke to Charles Powers at CNS Management. He's the environmental consultant for the site and has soil and groundwater data to show there is heavy contamination. Mr. Powers will e-mail a copy of his lab work to DEC for review. Once this groundwater/soil data comes in, the case may be referred to Remediation.9/22/11- DEC Piper spoke with Charles Powers. He will sent reports for review.

Remarks:

CALLER STATES THAT 3 550 GALLON USTS WITH GASOLINE WERE DISCOVERED. THERE IS SOIL CONTAMINATION AND CLEAN UP IS PENDING.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the

MAP FINDINGS

HUDSON RIVER PCBs (Continued)

1000384273

length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the

Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company with the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Site Description: The site is located on Broadway in Manhattan, between Dongan Place and Arden Street. It is currently occupied by an apartment building complex. A series of gas holders were constructed on the site starting in 1864 and occupied the site until the early 1920s. A Site Characterization was performed in December 2004. No significant MGP contamination was encountered and a no further action letter was issued in September 2005. A release and covenant not to sue was issued by DEE. No ECs/ICs required.

Env Problem: A Site Characterization was performed in December 2004 which identified no impacts to the environment.

Health Problem: Public water is provided to the area, thereby preventing exposures to groundwater. Public exposures are not expected since the investigation of the site found little evidence of waste material.

DEC Memo:

Sangesland spoke to Rob Hill at Castle. Castle driver overfilled the tank. Approx 25 gal of #6 spilled onto a dirt area. As of 2PM they have dug down approx 3 or 4 inches deep. Sangesland asked Castle for photographs showing the original spill on the ground (taken when cleanup crew first arrived) and a photo of the area after all excavation is completed (before clean fill is put back in the hole) 11/14/06-Hiralkumar Patel. spoke with Rob Hill at Castle oil. he has hired Petroleum for cleanup. as per Mr. Hill, PTC has removed about 4 drums of contaminated soil. Mr. Hill has some photographs after they done excavation, which he will email me. 11/20/06-Hiralkumar Patel. spoke with Mark at PTC. they have removed 15 drums of contaminated dirt from tank room as well as outside at vent. no soil excavation done at site. as per Mark, area was mostly clean after they removed this dirt. spoke with Mr. Hill. he will send photographs in email. 11/21/06-Hiralkumar Patel. visited site. spoke with Richard (212-942-9080), super at building. as per super, during oil delivery due to high pressure, petrometer gauge line got ruptured. they have replace this line. as per super, there was no oil spill inside tank room. spill was at vent pipe. area around vent pipe is clean now. as looking photographs from Mr. Hill, found one photograph which shows oil spill inside building and also shows oil on wall. doesn't know which part of building it is. left message for Mr. Hill to explain this photograph. during site visit i haven't walked through tank room, so not sure whether any oil spill inside tank room or not. spoke with Mark at PTC to know whether there was any oil spill inside tank room or not. Mark will call back once he check with his technician. spoke with Mr. Hill. he explained that the oil on wall inside tank came through window close to vent pipe. this window was open during oil delivery and whatever oil spill, part

Spiller Name: CHRIS ARBIAN
Spiller Company: KEYSTONE GATEWAY CORP
Spiller Address: 119 ELLWOOD ST
Spiller City,St,Zip: MANHATTAN, NY
Spiller Company: 999
Contact Name: JOE OSTROWSKI
Contact Phone: (718) 624-4842
DEC Memo: 12/08/08-Zhune spoke to Joe Ostrowski from Petroleum Tank Cleaners (718)624-4842. He said we cleaned the tank on Friday 12/04/08. We put oil and the tank leaked from the bottom. Spill cleaned.12/12/08-Zhune spoke to Paula Madritao (212)889-0201 Ext. 305 from Gateway ventures LLC. she said PTC cleaned the spill approximately 30 gallons. Spill was contained in the tank room. Concrete floor No drains, no soil impacted. PTC installed a temporary tank they will test the old tank. Lidia Montoya **property manager**Gateway Ventures LLC.243 5th Ave, Suite 701New York, NY 10016Ph. (212) 889-0201 (212) 684-4141 Ext. 313 (818) 822-5132 (C) (818) 907-0800 (O)email: lidiamaint@gmail.com12/16/08 A CSL letter was sent to Robin Ignico at the above address.12/18/08- Zhune spoke to Mark Salamack from PTC. He said they cleaned the tank. The oil company filled it up. Later on they called PTC saying tank was leaking. PTC empty the tank out put a temporary tank. Tank is sitting on soil. They cleaned as much as they can but still they have to remove the tank and clean. they need new tank. 01/09/09-Hiralkumar Patel. received another complaint (spill #: 0811168) from Island tank. Vinny reported spill of 2000 gal from tanks. visited site. met Bill (646-215-1168) at the site. Bill mentioned that management is handling two buildings on Ellwood Street: 97-105 Ellwood st (spill #: 0810144) and 107-119 Ellwood st (spill #: 0809967). both buildings have 3000 gal aboveground tanks sitting on floor. both tanks were in use to store #2 oil. both tanks were found leaking and has open spill cases. Bill mentioned that they found contaminated material around tanks and after cleaning those material, found leak from tanks on tank room floor. management hired PTC who removed product from tanks and cleaned those tanks from inside. found tanks in poor condition. Bill mentioned that management is planning to replace these tanks. both buildings have two 275 gal temporary ASTs. no soil investigation has done to confirm any contamination under tank room floor.PBS #: 2-189472. PBS expired on 04/17/08.received call from Chris from Gateway Ventures. they are currently getting proposals for tank repair. he mentioned that owner wants to repair these tanks. tanks will be cut from bottom and new bottom plate will be installed and then tanks will be installed on saddles. as there is no room above tank at 107-119 Ellwood street, owner is planning to lower tank room floor by excavating concrete and some soil. and there will be no change in elevation at 97-105 Ellwood street location. explained him that the department can wait for tank repair/replacement but requires confirmation that there is no contamination under any tank. told him that the department requires soil investigation under the tank for any contamination. asked him to call DEC Veronica on 01/12/09 with their decision regarding soil investigation. also asked him to renew PBS registrations for both tanks.Chris Darbidian or Sal GuyomiPh. (212) 684-4141 Ext. 311email: christmaint@gmail.comCarol Lilienfeld 212-683-3344 212-286-8481sent email to Chris with PBS renewal forms and instruction.01/22/09-Hiralkumar Patel. received message from Ms. Montoya requesting list of contractors for required soil investigation. sent email to Ms. Montoya with list of

contractors.**refer to spill #: 0810144 for next door site under same management.**06/01/10- miller 06/01/10-Zhune. Environmental Group Inc. emailed the report. report dated 11/4/09 The client has stated that the (2)two above ground storage tank (AST's)located in the basement of the building were cleand and refill with #2 fuel oil. Immediately after fill up, the oil was observed leaking from the AST'. An Environmental cleaning company came to the site and removed the remaining oil from the tanks and cleaned up any spill in the basement are. Later on, the AST's were cleaned and removed from buildings and temporary Ast's were put into service.On October22, 2009, MEG arrived at the 107-119 Ellwood street location and advanced four (4)borings at the AST bed. Soil samples were taken at depth of S-1 3-4', S-2 4-5', S-3 4-5'S-4 2-3'. Perched groundwater was encountered 4 to 5 feet below grade. Refusal was found in S-1 4'bg. Borings S-2, S-3, S-4 has strong olfactory emanations and high PID readings. The soil analytical results indicated VOC's above the NYSDEC TAGM 4046 in sample S-2 (1.3.5 Trimethylbenzene 3800 ug/kg,)and sample S-3 (1,2,4 Trimethylbenzene 32000 ug/kg, 1.3.5 Trimethylbenzene 11000 ug/kg, Naphthalene 18000 ug /kg, Total xylenes 1200 ug/kg). SVOC's were detected above tha NYSDEC TAGM 4046 in samples S-1(Benzo(a)anthracene 300 ug/kg) and S-3 (Naphthalene 19000 ug/kg)

Remarks:

CALLER STATES THAT THEY CLEANED A TANK TODAY AND NOW THEY GOT A CALL STATING THAT AFTER THE TANK WAS FILLED THERE IS A SPILL IN THE BASEMENT. THE BOTTOM OF THE TANK IS ROTTED. CLEAN UP IS PENDING. TANK IS A 3000 GALLON VAULTED, PRODUCT IS CONTAINED TO THE VAULT.

DEC Memo: This is a leak from a second tank at this address. There was another leak 3 or 4 days ago 12/05/08 from the first tank. Both tanks/cases will be managed by Veronica Zhune. 12/16/08 A CSL letter was sent to Robin Ignico at: Gateway Ventures LLC. 243 5th Ave, Suite 701 New York, NY 10016 12/18/08- Zhune spoke to Mark Salamack from PTC. He said they cleaned the tank. The oil company filled it up. Later on they called PTC saying tank was leaking. PTC empty the tank out put a temporary tank. Tank is sitting on soil. They cleaned as much as they can but still they have to remove the tank and cleaned underneath the tank. They need new tank. PBS #: 2-254614. PBS expired on 04/17/08. see notes for spill #: 0809967 for more details. **refer to spill #: 0809967 for next door site under same management. **06/01/10- miller Environmental Group Inc. sent the report The client has stated that the (2)two above ground storage tank (AST's) located in the basement of the building were cleaned and refill with #2 fuel oil. Immediately after fill up, the oil was observed leaking from the AST'. An Environmental cleaning company came to the site and removed the remaining oil from the tanks and cleaned up any spill in the basement area. Later on, the AST's were cleaned and removed from buildings and temporary Ast's were put into service. On October 22, 2009, MEG arrived at the 107-119 Ellwood street location and advanced four (4) borings at the AST bed 02/05/13- John Schretcmayer from Associate Environmental called. He said the owner of the building hired Associate Environmental to close this spill. 7/19/13 Associated Environmental Services, Ltda sent the Subsurface Investigatio Report dated April 19, 2013. Natural gas was installed with a boiler conversion at 97 Ellwood Street. Three soil borings were installed within the former footprint of the AST and a total of six soil samples were collected from the three borings. Groundwater samples were collected from each boring at three to seven feet below the basement grade. The soil analytical result indicate no VOCs and no SVOCs detected in any of the eight samples collected. The groundwater analytical result indicate one VOC detected toluene at 14 microgram

Remarks: the site. Bill mentioned that management is handling two buildings on Ellwood Street: 97-105 Ellwood st (spill #: 0810144) and 107-119 Ellwood st (spill #: 0809967). both buildings have 3000 gal aboveground tanks sitting on floor. both tanks were in use to store #2 oil. both tanks were found leaking and has open spill cases. Bill mentioned that they found contaminated material around tanks and after cleaning those material, found leak from tanks on tank room floor. management hired PTC who removed product from tanks and cleaned those tanks from inside. found tanks in poor condition. Bill mentioned that management is planning to replace these tanks. both buildings have two 275 gal temporary ASTs. no soil investigation has done to confirm any contamination under tank room floor.duplicat spill. refer to spill #: 0810144 & 0809967.case closed.
 CALLER STATES THAT (2) 3000 GALLON TANKS FAILED AT THE ABOVE LOCATION. ABOUT 2000 GALLON OF PRODUCT SPILLED TO SOIL AND SEWER. THE PRODUCT IS UNDER THE CEMENT BASEMENT FLOOR. CLEAN UP STATUS IS UNK.

05/06/13-Hiralkumar Patel. alternate address for 52 Arden St: 52-60 Arden St, 31-39 Sherman Ave
 weather spills: 9212515, 9407037, 0110961, 0900926, 1216538, 1300913
 PBS #- 2-334391. as per PBS record, site has one active 6,000 gal #4 oil AST in contact with soil. the tank was installed in Sep. 1976.52 Arden Associates, LLC. **property owner**c/o Lemle & Wolff, Inc.5925 BroadwayBronx, NY 10463Attn.: Julisa Santana **property manager**Ph. (718) 884-4689/7676 (O) (646) 361-1371 (C)Fax (718) 884-4902/5300email: julissa@lemlewoff.com as per NYC DOB permit approved on 04/16/12, owners applied to change grade of fuel from #6 to #4 oil. -----spill # 9212515 was reported on 02/04/1993 as 5 gal #6 oil spilled due to faulty gauge on tank. oil spilled onto concrete paved area. case closed.spill # 9407037 was reported on 08/24/1994 as 50 gal oil spilled onto sidewalk due to broken gauge. case closed.spill # 0110961 was reported on 02/16/2002 as 30 gal #6 oil spilled onto sidewalk due to defective gauge. case closed.spill # 0900926 was reported on 04/23/2009 as 10 gal #6 oil spilled to the pavement due to broken gauge. case closed.spill # 1216538 was reported on 03/19/2013 as 20 gal #2 oil spilled onto concrete sidewalk due to faulty gauge. case closed.spill # 1300913 was reported on 04/26/2013 due to tank test failure. case closed and merged with the subject

LEMLE WOLFF MANAGEMENT (Continued)

S113494302

spill.05/06/13-Hiralkumar Patel.12:28 PM:- spoke with Bob at Protest. he mentioned that a tank system test was performed on 04/30/13 which failed. they performed isolation test today and found leak in remote fill line and vent line. Bob mentioned that tank and supply/return lines are tight. 12:30 PM:- spoke with Ms. Santana. informed her that the department requires further investigation of the leaking fill line and cleanup of any associated spill. she mentioned that the leaking fill line will be replace. she will talk to Protest. asked her to call for an inspection prior to backfilling the fill line excavation.1:07 PM:- sent letter to Ms. Santana requiring cleanup of any spill associated with leaking lines. asked her to submit report by the end of 06/21/13. letter emailed to Ms. Santana and Bob.05/08/13-Hiralkumar Patel.3:29 PM:- spoke with Bob. he mentioned that Protest will submit work proposal for required investigation. he mentioned that field work along leaking fill line is not possible until scaffolding is removed, which is located right in area of the remote fill line. Bob confirmed that the remote fill line has been capped to prevent future oil deliveries.06/05/13-Hiralkumar Patel.2:04 PM:- spoke with Ms. Santana. she mentioned that scaffolding along Sherman Ave (where remote fill line located) will be removed within two weeks and then only NYC DOT will issue permit to open sidewalk for fill line replacement. informed Ms. Santana that the department must be informed prior to backfilling the excavation along remote fill line.06/06/13-Hiralkumar Patel.8:15 AM:- received email from Tom. he requested two week extension to submit report.06/07/13-Hiralkumar Patel.3:01 PM:- sent email to Tom approving two week extension. asked him to submit report by 07/08/13.06/24/13-Hiralkumar Patel.9:18 AM:- received email from Bob from Protest. he mentioned that DOT permit should be received this week and they are planning to start work on 07/01/13.07/01/13-Hiralkumar Patel.1:20 PM:- received email from Bob. they removed remote fill line and discovered contamination in two locations: a small spot near the curb and more near the building.3:10 PM:- spoke with Bob and scheduled site visit tomorrow at 9 AM.07/02/13-Hiralkumar Patel.9:00 AM:- visited site. met crew from Protest. as per crew, old fill line was about 3 inches below surface near the curb and about 8 inches below surface near the building's foundation wall. observed old fill pipe. found petroleum product on elbow under the fill port indicating leak near elbow. observed contaminated soil in excavation near curb. also observed two holes in old fill line. these holes were found in section which was close to foundation wall. Protest crew started removal of contaminated soil from area close to foundation wall. found large boulders in excavation. as per crew member, there is more contamination under the boulder, so they will remove the boulder. based on observations during site visit, it looks like there is more contamination horizontally.11:49 AM:- spoke with Bob. due to proximity to building's foundation wall, size of boulders in excavation and possible need for larger excavation, asked Bob to consult with structural engineer (for both building safety and pedestrian/resident's safety) prior to any deeper/wider excavation under the sidewalk. asked Bob to call for an inspection prior to backfilling the excavation. also asked him to record observations during field work.11:52 AM:- spoke with Ms. Santana and Chris Anelante (Ms. Santana's supervisor). informed them about observations during site visit today. strongly suggested them to consult with structural engineer to ensure safety. informed Ms. Santana and Mr.

LEMLE WOLFF MANAGEMENT (Continued)

S113494302

Anelante that the Department must be informed prior to backfilling of the excavation. Mr. Anelante inquired about other remedial methods. informed him that prior to finalizing remedial method, the department requires complete delineation of contamination. they will discuss with consultant and will call back next week with answer: excavation or in-situ remediation.12:43 PM:- sent email to Ms. Santana suggesting consultation with structural engineer. asked her to call for site visit prior to backfilling. informed her that contamination must be delineated completely prior to finalizing remedial method.07/08/13-Hiralkumar Patel.1:57 PM:- left message for Ms. Santana.07/10/13-Hiralkumar Patel.2:49 PM:- spoke with Ms. Santana. she mentioned that a large boulder found in excavation. due to safety reason, they stopped work. structural engineer is inspecting the area on 07/12/13. based on his inspection, they may continue further excavation. Ms. Santana mentioned that prior to any further excavation, if possible, they have to finish rehab work and remove sidewalk scaffolding, which may be done in four weeks from now. asked Ms. Santana to provide copy of structure engineer's report. informed Ms. Santana that the department may require installation and monitoring of groundwater monitoring well(s), regardless of results of excavation.07/30/13-Hiralkumar Patel. scheduled a site meeting at 9:30 AM tomorrow.07/31/13-Hiralkumar Patel.9:15 AM:- visited site. met Nick Recchia (GEI Consultants) and Ed Miller (Lemle & Wolff). informed them about on-going spill remediation at 50 Thayer St (spill #: 9514651). inspected remote fill line excavation. excavation was not expanded since earlier site visit on 07/02/13. found large boulders in excavation. found oil impact on eastern sidewalk of the excavation, towards 50 Thayer St. asked Mr. Miller to submit structural engineer's inspection report. due to large boulders in excavation, Mr. Miller is not sure about further excavation. asked him to call back by the end of 08/07/13 with final decision: either further excavation with shoring or delineation. informed him that the department requires complete delineation of contamination. suggested Mr. Miller to install monitoring well(s) during delineation as they need heavy machine due to boulders under sidewalk and possible shallow bedrock.Nicholas RecchiaGEI Consultants, Inc.Ph. (631) 759-2973 (O) (516) 395-8763 (C)email: nrecchia@geiconsultants.comEdmund MillerLemle & Wolff, Inc.Ph. (718) 884-7676 Ext. 219email: EMiller@LemleWolff.com08/02/13-Hiralkumar Patel.12:21 PM:- received email from Mr. Miller including structural engineer's report. Steven Kaplan, licensed engineer, recommended no further excavation and stated that removing boulders or bedrock from underneath the sidewalk will negatively impact the structural stability of the building and sidewalk area.08/09/13-Hiralkumar Patel.2:16 PM:- left message for Mr. Miller.08/12/13-Hiralkumar Patel.11:40 AM:- spoke with Nick. he got approval on cost estimate for delineation. he is planning to install three bedrock wells: one at leaking fill line location, one at intersection of Sherman Ave and Arden ST and one in between. he will submit work plan with details.11:50 AM:- sent email to Mr. Miller. informed him that endpoint soil samples must be collected and analyzed from fill line excavation area. asked him to submit schedule for sampling and backfilling, so duplicate soil samples can be collected by DEC contractor (as part of ongoing PIN job at 50 Thayer St). email copied to Nick.08/13/13-Hiralkumar Patel.12:59 PM:- received email from Nick. he mentioned that due to safety concerns, the fill line excavation was backfilled after site visit on 07/31/13. Nick proposed

LEMLE WOLFF MANAGEMENT (Continued)

S113494302

to install soil boring in former fill line excavation area.1:26 PM:- sent email to Nick. informed him that based on available information, soil boring is needed in former fill line excavation area.1:27 PM:- spoke with Nick. informed him about soil must be sampled during boring/well installation. he will submit work plan, including schedule, for soil and groundwater sampling.08/16/13-Hiralkumar Patel.12:03 PM:- received email from Nick including work plan for bedrock well installation. Nick proposes to install three (3) 2-inch bedrock wells to 15 ft depth. he also proposes to collect two soil samples using soil borings. soil borings will be completed to the top of bedrock or drilling refusal, using split spoon samplers. soil and groundwater samples will be analyzed via 8260/8270.12:31 PM:- spoke with Nick. informed him that wells must be installed to a minimum depth of five ft below water table, which may be deeper than 15 ft. also, the department requires continuous split spoon sampling during investigation in the former leaking fill line area. due to the release of viscous #6 oil, suggested Nick to install at least four inch wells. Nick will talk to Mr. Miller.12:35 PM:- left message for Mr. Miller. informed him that borings must continued until clean zone found. suggested him to install 4 inch wells, instead of proposed 2 inch wells.12:45 PM:- spoke with Dave Lothior at Envirotrac. informed him about proposed delineation at the site. asked him to review proposed work plan for any comments/suggestions.12:55 PM:- forwarded work plan to Dave for review.2:03 PM:- received email from Dave. he suggested installation of two wells on Sherman Ave sidewalk and two wells on Arden Ave sidewalk. he also suggested that wells should be installed to a depth of 20 ft bg.08/19/13-Hiralkumar Patel.10:17 AM:- received email from Mr. Miller. he mentioend that scaffolding/sidewalk bridge may be removed by the end of this month.1:16 PM:- sent email to Dave requesting call back.3:45 PM:- received call from Dave. discussed the proposed work plan. Dave will send comments on the proposed work plan.08/28/13-Hiralkumar Patel.2:17 PM:- spoke with Dave. he will submit comments on proposed work plan, by 09/04/13.09/20/13-Hiralkumar Patel.2:05 PM:- received email from Dave including letter with recommendations, after reviewing the proposed work plan from Nick. - instead of three wells in line on Sherman Ave sidewalk, Dave recommends installation of one well in vicinity of remote fill line, one well on the corner of Arden ST and Sherman Ave and one well on Arden St, approx. 20 to 30 ft from corner- based on groundwater depth found at Verizon site, Dave recommends well installation to a minimum depth of 20 ft, unless conditions observed during drilling warrant otherwise- due to the potential for the presence of free product, well should be four inch in diameter- all borings/wells should be advanced and sampled continuously until bedrock is encountered10/15/13-Hiralkumar Patel.12:43 PM:- left message for Nick.10/17/13-Hiralkumar Patel. received email from Nick (at 8:34 PM on 10/16/13) stating that scoffolding was removed this week.10:12 AM:- sent letter to Mr. Miller, including copy of recommendation letter from EnviroTrac, and asked to submit a revised work plan by the end of 11/29/13. letters emailed to Mr. Miller, Nick and Dave.11/06/13-Hiralkumar Patel. received email from Nick (at 3 PM on 10/31/13) including revised work plan. Nick proposed to collect soil samples from each borehole using split spoon sampling techniques. split spoons will be collected at the surface (0-2 ft) interval and at 5 ft increments (5-7 ft, 10-12 ft) and at the soil/groundwater interface. three (3) 4-inch wells will be installed. soil samples with high PID readings and

DEC Memo: DEC Piper spoke with Mark at PTC. 5K vaulted ust with debris around it is leaking .Managing agent has proposal to pump and remove tank and cont. CSL sent. PBS # 2- 091480.6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A.10/14/10 - Raphael Ketani. The spill took place on 3/30/10 and consisted of a release of 20 gals. of #6 oil to the soil. It is an equipment failure, but the type of failure is not indicated.The owner is Inwood Ventura Associates, LLC, 149-45 Northern Blvd., apt 6V, Flushing, NY, 11354. The PBS case is #2-091480. It lists a 5,000 gal. tank in a vault with #6 oil that is in service. The contact is Steven Lavelle (718) 463-0470, ext 16.There is no paper file and there is only a CSL in the E-docs.I tried to contact Mr. Lavelle regarding the status of the cleanup, but I could only leave a voice message.12/6/10 - Raphael Ketani. I spoke to Mr. Lavelle. He said that PTC finished putting in the replacement oil tank just 2 weeks ago. He said that the problem has been going on since March and now it's December. He said that he will have his assistant look for the closure report and send it to the DEC.12/9/10 - Raphael Ketani. Mr. Lavelle sent me three invoices from PTC showing that Inwood Ventura Associates had been billed for the cleanup work. Two invoices listed the specific work and materials used in the cleanup.1/11/10 - Raphael Ketani. Mark Salamack of PTC (718) 624-4842 sent me a letter report explaining the work that took place. The letter was accompanied by a disposal manifest, a hand drawn diagram, and pictures of the cleaned tank room floor. I reviewed the documents and determined that they accurately reflected the work that took place and that the spill had been cleaned up.As the spill was small and contained to the tank room, and as the oil was thick #6 oil that had spilled onto a concrete floor with no cracks, I determined that the threat to the public and the environment were minimal to non-existent. Therefore, I closed the spill case.

Remarks: not contained,caller is trying to get approval to empty the tank. clean up pending

DEC Region: 2
DER Facility ID: 344456
DEC Memo: 3/14/08 bf: Called Pro Test. Tank is above ground and wrapped in concrete block. Manhole cover not sealed properly. No release observed by Pro test. Proposal sent to The Dermot Company to make repairs. Sent ttf to:Carmen SantiagoThe Dermot Company320 West 57th Street, 5th FloorNew York, NY 100193/28/08 Recieved fax from Ted Dros of Pro Test. They will be handling the job. bf6/3/08 On 5/13/08, received letter from Robert Urban of Pro Test. Re-gasketed and re-bolted manhole cover and reconnected vent line. Tank passed tightness test on 4/18/08 (results attached). NFA. bf
Remarks: Dry leak... think manhole cover is not properly sealed.

S104650499

adjacent boiler room which is 3 ft lower than the tank room. Oil is coming through the wall and onto the floor around the boiler. Oil was in the sump pit being pumped out to sewer. Mark at PTC disconnected sump pump. Property Manager is Athea - 516-315-8072. Tipple responded to the site and confirmed there is a major problem and the tank must be drained immediately. 9/27/04 closed spill # 99-14701 and referred to this spill #. Eastman currently on site cleaning and preparing to remove the 4000 gal. tank. Action Remediation set up a 275 gal. tank as a recovery tank for oil pumped from sump pit. Sump currently has a steady flow of running oil entering it. Robert Wisco is the contact person. Office-516-487-6790 Cell-516-369-7095. 11/22/04 Three wells installed. Two of the wells have been utilized as recovery wells, the up gradient well has always been clean. Currently there is a sheen in two recovery wells. 8/25/05 - Austin - Reassigned from Tipple to Rahman. 10.13.05 SR// I rec'd a call from Kevin o'Connor, Action Environmental (516)781-3000, saying the biweekly groundwater monitoring data shows no free product (#6 oil). The tank room was dug out and contaminated soil was removed and no end point sample was taken. I suggested to take at least one ground water sample from #3, #1 wells and soil samples from boiler room and wells as well. 12/16/05- Sharif// Case was transferred from Rahman to Koon Tang for reassignment. 12/19/05: Case reassigned to Andersen. Sent letter requiring gw samples to be taken from mw 1 and 3. Results due back 2/13/06. 1/19/06: Reviewed a fax with the location of a fourth monitoring well. Product was found in MW3 on 1/12/06, after no product was found earlier. 1/23/06: Site visit with NYSDEC Andersen and Kevin O'Conner of Action Environmental. Investigation of the four wells revealed that product was present in wells 1 and 3. A new AST was installed in the tank room about a year ago. It is a 4000 gallon tank and has a concrete secondary containment enclosure. Kevin mentioned that during excavation they found that the soil was clayey. We decided that another well is required downgradient of MW 3, that groundwater samples from all wells would be analyzed through EPA methods 8260 and 8270, and that he would continue hand-bailing the product from the wells with a sheen because there is not enough product present to use a skimmer. 2/10/06: reviewed water sampling data, minimal contamination, continue bailing. 5/10/06: Left phone message with Kevin O'Conner for update on bailing. Spoke with Kevin O'Conner. There is still oil present at about the same level: a little more than a sheen. Bailing with absorbent pads will continue. Report with water levels will be sent. 5/11/06: Received monitoring info. 0.25' product in MW3 in March, April, and May. Absorbent pads are changed monthly in MW3. 7/12/06: Received monitoring and gauging info for June and July 2006. Sheen present in MW 1 and MW3. Absorbent pads were changed. 10/19/06: Received August - October monitoring data. No product in August or October, sheen in MW's 1 and 3 in September. October 17 sampling noted that wells 1, 2, and 4 had oil in absorbent pads. Monthly gauging and recovery will continue. 3/27/07: Left voice message for Kevin O'Connor to followup on quarterly report. 3/28/07: Received monitoring report. 0.25' product in MW3. No product in other wells. Monthly recovery with absorbent pads will continue. 7/30/07: Left voice message for Kevin O'Connor to followup on groundwater sampling and reporting. 7/31/07: Spoke to Kevin O'Connor. Update report will be submitted tomorrow. Product is still present in one well, and pads have been changed every 3 days. 8/1/07: Received monitoring report. Wells sampled on 5/23 and 7/31/07. 1/4" product in well 3. Oil absorbent pads are

being changed 2-3 times a week.3/19/08: Spoke to Kevin O'Connor. Update report will be sent. Suggested use of Biosolve and recovery in MW3. 3/26/08: Reviewed bailing and monitoring data. A sheen is still present in MW3. Absorbent pads are changed weekly.2/4/09 - Carlson: Performed site visit with DEC Tibbe, Kevin O'Connor from Action Remediation, and a person from the management company. The NYSDEC requested two sidewalk wells. A workplan will be submitted.8/27/09 - Carlson: Reviewed work plan. Issued email requiring a revision: move eastern well location 20 ft closer to mw3. Also work plan should include well installation procedures. (Kevin O'Connor: hazmat3010@aol.com).9/3/09 - Carlson: Approved revised work plan for installation of two sidewalk wells. RIR due 12/3/09.11/18/09 - Carlson: Received well installation sampling and update report. Two new wells are clean. A sheen is still present in MW 1 and 3.1/13/10 - Carlson: Received December 2009 monitoring data. Sheen present in MW1.2/2/2010 - Carlson: Phone conversation with Kevin O'Connor. Groundwater samples will be collected.7/23/2010 - Carlson: Issued letter requiring RAP by 8/23/2010.9/22/2010 - Carlson: Reviewed RAP for P&T system. Sent email - implementation schedule required.1/24/11 - Breen: Received Pilot test report for recovery system. Three wells found to be too shallow. Consultant (Paul Stewart at ACT) wants to deepen them and repeat test. Approved via e-mail. 07/27/11: This spill case transferred from G. Breen to J. Kolleeny. - JK08/12/11: Reviewed Product Recovery Status Rpt by Advanced Cleanup Technologies, Inc. (ACT), dated 6/28/11 (in eDocs). Rpt summarizes install'n & operation of free product recovery system at site to address release of no. 6 fuel oil, including efforts to enhance system operation by deepening one of recovery wells. ACT concludes that despite these efforts, system did not recover significant quantities of product, and they note that there is currently no measurable product in any monitoring wells at site. Based on these conditions, ACT recommends spill closure. I sent letter (in eDocs) to Ms. Anne Murphy of Parkoff Management (RP) stating that spill closure cannot be approved at this time, and that DEC requires sampling of wells to evaluate potential dissolved-phase impacts to GW. - JK 01/23/12: Reviewed GW sampling letter rpt by Roux Associates, Inc. dated 1/18/12 (in eDocs), submitted via email by George Tyers: "Mr. Kolleeny, Please find attached results of a GW sampling event that was conducted at spill site per your request (by letter dated August 12, 2011). Based on analytical results, Roux Associates, on behalf of Parkoff Management, respectfully requests closure of Spill Case #0406853. Should you have any questions, please contact me at phone or email address below. Thank you." Report gives results of well gauging and sampling event on 12/20/11 showing no free product detected in any of six wells, and no significant detections of petroleum-related VOCs or SVOCs. Rpt requests spill closure; I concur. Closed spill case and sent closure letter (in eDocs) by email to Ms. Anne Murphy of Parkoff Mgmt., cc to Mr. Tyers of Roux. - J. Kolleeny

available documents.*-----*
-----*1) 1996/07/08: Fuel Oil Discovery in Basement:- report prepared by Lexicon Environmental Associates- oil discovered within the basement of the site- a sample of oil was collected for analysis- during site visit on 02/23/96, Lexicon found fuel oil within a sump which has several inlet pipes- removed total 1,650 gal oil/water mix- a portion of the facility's french drainage system, located in the west corner of the building, was excavated less than ----- when the trench was first excavated, only droplets of oil were evident. however, by the next day a 0.25 to 0.5 inch layer of oil was present within the trench less than ----- result of fingerprint analysis indicated that the oil most closely matched a weathered #2 fuel oil. however, the analysis was only an approximation due to the poor match of the sample pattern with that of the reference standard. as a result, the sample could also consist of #4 fuel oil or kerosene less than ----- the basement floor plan (1963) provided by NYNEX indicated that there are two fuel oil tank storage rooms present at the facility which are used for the boiler and turbine- the tanks consist of one 4,200 gal #2 oil AST for turbine and one 4,600 gal #2 oil AST for boiler- in addition, there is one 250 gal (active) fuel oil day tank and one 1,400 gal AST which is abandoned- floor drain inside the boiler room, which flows into the facility sump less than ----- there was no evidence of staining or product in the vicinity of floor drain in boiler room- according to facility personnel, #6 oil may have been historically used, but no knowledge as to the period #6 oil was used- based upon Excavation Plan 393-EX-1 (1926), bedrock slopes downward in an easterly direction less than ----- water often seeps into the basement through utility penetrations along the northwest wall of the building less than -----2) 1997/01/29: Documentation for NYNEX Facility: Lexicon submitted following documents for the site- Sanborn Map for area of site, june 1943- plat plan for area of site, 1974- basement plumbing and heating plan, 12/29/25- water and heating diagram, 12/29/25- plumbing and gas diagram, 12/29/25- excavation plan, 12/29/25- boiler replacement drawing, unknown date- basement floor plan, unknown date these documents not found in file. less than =====3) 1997/02/26: product sample result from Pedneault Associates:- fingerprint analysis shows sample to be diesel fuel and heavy weight oil4) 1997/03/20: letter from Berninger Environmental:- Berninger Environmental installed product recovery system in the french drain collection pit5) 1997/11/24: letter from Berninger Environmental:- on 10/29/97, Berninger with Miller Environmental installed three additional 4 inch wells (MW-4, MW-5 and MW-6) less than ----- wells MW-4, MW-5 and MW-6 are located in the sidewalk down gradient of MW-1- found product (unknown thickness) in wells MW-1, MW-4 and MW-6- groundwater flows to east less than -----6) 1998/03/11: letter from Berninger Environmental:- larger amount of water is entering the sump either from the amount of rain lately or they are dewatering another part of building7) 1998/10/21: results of groundwater samples from Pedneault:- on 10/16/98, two groundwater samples (from wells MW-11 and MW-12) were submitted for 8270 B/N analysis- no contamination found in samples8) 1999/06/18: results of groundwater samples from Pedneault:- on 06/15/99, seven groundwater samples were submitted for 8021 analysis- samples were collected at 13-15 ft from GP-13, at 16-18 ft in GP-14, at 16-18 ft in GP-15, at 14-16 ft in GP-16, at 16-18 ft in GP-17, at 16-18 ft in GP-18 and at

-----6-----149)

2002/11/20: Site Status Monitoring Report for Jan to Jul 2002:- on 02/23/96, heavy fuel oil was discovered in the basement sump pit-between Mar. and Oct. 1997, six (6) 4 inch wells were installed in area by Berninger Environmental- to date, a total of 12 monitoring well have been installed at the site- Miller Environmental has been monitoring fluid level in the wells on a monthly basis since 2000- due to the viscosity of the product at this site it is very difficult to get an accurate product thickness and depth to groundwater measurement- based upon groundwater data collected, groundwater appears to be flowing east-northeast less than ----- product noted in wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-9 and MW-1010)

2003/05/21: Site Status Monitoring Report for Nov. 2002 to Apr. 2003:- product noted in wells MW-1, MW-4 and MW-911) 2004/12/03: fingerprint analysis result:- Miller collected samples of fule oil from the site and from 75 Thayer Stree for comparison- one oil/water sample was collected from a well, located at 50 Thayer St, just prior to VEFR activities- second oil/water sample was collected from an excavation within the basement of 75 Thayer St- samples were analysed for method 8015 (fingerprint)- analyticals results provided by lab indicated that there was a 24% probability the two samples were from the same source- upon review of the chromatograms provided by lab, Miller Env. believes that the identified fuel oil from the sample obtained from the well at 50 Thayer St is less weathered version of the sample obtained from teh tank excavation in basement of 75 Thayer St less than ----- despite the difference in concentrations between the two samples (100% fuel oil for the building and 24% from the well), a comparison between the two chromatograms indicates numerous similarities between teh chromatogram peaks and their times less than ----- further confirmation would require a subsurface investigation to delineate the extent of the plume resulting from the release at 75 Thayer St12) National Environmental performed monthly VEFR events and fluid-level gauging from Mar. 2005 to July 2008. during this period, product found in in wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-9 and MW-10. wells MW-3, MW-7, MW-8, MW-11 and MW-12 were inaccessible.13) 2009/05/06: Groundwater Monitoring Report for Jan. 2009:- Envirotrac was contracted in Oct. 2008- groundwater sample was collected from well MW-10 on 01/15/09- product found in wells MW-1 through MW-6 and MW-9- wells MW-7, MW-8, MW-11 and MW-12 were not accessible due to new sidewalk construction- groundwater found between 11.88 and 13.07 ft below top of casing- minor VOCs detected in groundwater sample from well MW-10 (max: 1.8 ppb Naphthalene)14) 2009/06/05: Groundwater Monitoring Report for Apr. 2009:- groundwater samples were collected from wells MW-2, MW-3, MW-5, MW-6 and MW-9 on 04/30/09- product found in wells MW-1, MW-4 and MW-9- the detected free-phase petroleum appears to be #6 fuel oil- wells MW-7, MW-8, MW-11 and MW-12 were not accessible due to new sidewalk construction- groundwater found between 11.88 and 13.07 ft below top of casing- groundwater flows to north-northeast less than ----- minor VOCs detected in groundwater samples (max: 6.8 ppb

at 42 Thayer street are located along the Thayer St. inspected property at 47 Arden St. met with Juan, building super, who is working at the building for past 29 years. he mentioned that building was using #6 oil, but changed grade to #4 oil just when he started working at the building. the tank at 47 Arden St is completely aboveground on saddles. all lines to/from tank are aboveground, except portion of fill line that runs about 12 ft under the sidewalk. no oil found in sump in boiler room. tank/boiler room at 47 Arden street are located along the Arden St. inspected property at 52 Arden St. met with Ms. Santana whose company is managing this building for 26 years. as per Ms. Santana, the building has the same tank since they started managing it. the tank at 52 Arden St is completely aboveground on saddles. all lines to/from tank are aboveground, except portion of fill line that runs about 18 ft under the sidewalk. tank/boiler room at 52 Arden street are located more than 70 ft west of the well MW-10 along Verizon property. met with Dave (Envirotrac), Gavin (Envirotrac) and Tom (Verizon). inspected basement of verizon building. Tom showed sump in boiler room where product found initially. clear water noted in sump. the sump is located more than 30 ft away from northern foundation wall of the verizon building. there is a cable vault between the northern foundation wall along Sherman Ave and sump in boiler room. no major impact noted in cable vault, except area near outside well MW-1 where some black stains found on vault floor. Tom mentioned that the black material could be water proofing material. also found cable penetrating foundation wall in area close to outside well MW-1. no sign of oil seepage found through cable penetration in wall. asked Tom to provide details about foundation depth, water proofing project and cable conduit that leaves the northwest corner of the building (area between outside wells MW-1 and MW-2). inspected entire basement along the foundation wall area. there is a vault under the sidewalk along Thayer St. the active fill line cross the sidewalk into this vault and then fill line runs aboveground. the concrete patch along the Thayer St curb line was probably the old fill port, but it is also above the sidewalk vault area. no sign of oil seepage found through southern foundation wall, towards buildings 42 Thayer St/47 Arden St. there is open parking lot in northwestern corner of the property and southern side of the site (between the verizon building and 42 Thayer St/47 Arden St properties). discussed about circular patch with metal plate along Sherman Ave side, in line with well MW-4 and fire hose connection. Tom mentioned that it could be water main valve. the verizon building basement is approx. 12 ft bg. during site visit, all wells were gauged. groundwater found between 10 and 12.7 ft bg. during well gauging, product found in wells MW-1, MW-4 and MW-9. no product found in wells MW-2, MW-3, MW-5, MW-6, MW-7 and MW-10. collected water samples from wells where no product detected, except well MW-5 where not enough water found. found sewer smell in groundwater from wells where no product found. less than -----during site inspection, discussed with Tom about further investigation needed on south and west side of verizon building. due to vault under the sidewalk along east side of building (along Thayer St), no need for investigation in that direction. during inspection, both Verizon and EnviroTrac requested copy all available documents related to this project. 3:45 PM:- revisited area to inspect additional possible sources. based on available data to date and site location, other possible sources for petroleum product on south side of Sherman Ave are: 1. 65 Arden St. 2. 60 Thayer St. 3. 68 Thayer St. 4. 75

Investor, LLC1775 Broadway, Suite 510New York, NY
1001908/22/08-Vought-See also spill #08057914 for separate location
owned by same RP.1/15/09 On 12/31/08, received letter from Asher Taub
attorney of Alatsas and Taub, P.C. dated 12/29/08 requesting closure
of spill. Letter included passing tank tightness test report. Tank is
AST. called Mr. Taub today. (718)891-1200. Told him i need closure
letter explaining why tank failed, repairs, and contamination. bf
bf01/26/10-Vought-DEC Sangesland received call from attorney for
Dermot Properties (Evan Katin-Borland Ph:646-822-1321) who noted that
he was calling concerning DEC legal case and requested further
information.8/18/11 Received letter on 8/17/11, dated 3/31/11, from
Bob urban of Pro Test. Failure was due to a dry leak. The return line
at the connection to the tank and a portion of the fill line inside
the tank room was the cause of failure. Both line were repaired. No
visible contamination was found. Tank passed tightness test on
3/29/11. NFA. bf

 DEC Memo: 08/21/08-Vought-Off hours responder. Called Eric Sutphin (Hess 908-392-0136) and as per Eric AL Eastmond on site and spill on concrete in rear of property and oil ran down wall and affected concrete on adjacent property as well. Two drains affected and no spill inside. Vought called AL Eastmond (718-378-3000) and spoke to Troy and both drains were concrete bottomed and AL Eastmond returning to site today to finish powerwashing second drain and concrete as well. As per Troy no cracks in concrete or pathways to subsurface. Vought discussed site with DEC Austin who suggested that confirmatory site visit be performed by DEC Patel. Vought spoke to Patel who will perform site visit. 08/22/08-Vought-DEC Patel performed site visit and concrete in good condition and site was clean including impacted alleyway and adjacent property. Spil closed by Vought.
 Remarks: OVERFILL. SPILL IS ONTO CONCRETE IN REAR OF BUILDING. SPILL IS CONTAINED. EASTMAN & SONS ON SITE FOR CLEAN UP.

DEC Memo: DEC Piper spoke with FDNY dispatcher. He does not have full report though will call when he is better informed. I recieved notification that city OEM is on scene and requested callback. They stated water service line break in building and boiler is leaking. There is oil pockets on 3' of water in boiler room. tank is okay. I stated that most likely the water displaced 5 gal buckets that were left from filter changes and not disposed of. Boilers don't typically leak because they become submerged. OEM confirmed buckets floating in area.A.L.Eastmond hired for cleanup. OEM stated the main is off until repairs can be made by DEP. they have a trash pump discharging water to the sewer and waiting on vac truck. They said when it arrives they will pup from the bottom. I said a tanker full of water does us no help and that the oil should be skimmed off the top first. He agreed on the logic. Closed.
Remarks: HEATING OIL MIXED WITH WATER; FIRE DEPT. ON SCENE;

 DEC Memo: 6/7/07-Matthew Klaas (Albany DER)-Searched for spill information on PBS database regarding this spill site. There was no record of this site in the PBS.-Called the given contact, Eco Staniewski at 718-482-4982, the number only resulted in a voice recording regarding the law enforcement captain. There are no further contacts or telephone numbers, due to the small volume of spill and the age of the file, I will reccomend it for closure.-Called region 2 division of law enforcement at 718-212-6451 to see if they had any further documentation of incident. No one answered the phone, will try back later.3/31/09 - Austin - Transferred from Needs Reassignment to Rahman for further work to remeidate and close - end

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
Waste name: MERCURY

Waste code: D011
Waste name: SILVER

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042
Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075
Waste name: NICOTINE, & SALTS

Waste code: P081
Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE" // : PIN-4457.09/25/95: PIN-4457 - ASSIGNED TO CHRIS FOR TRACKING PURPOSES 5/10/04 - AUSTIN - TRANSFERRED FROM TOMASELLO TO TIPPLE - END8/23/05 - Raphael Ketani. Case transferred to Jeff Vought.04/26/07-Vought-No file found in PIN files or files of Remediation section. No edocs available. Vought called AG's office and they have no record of site or cost recovery. Vought spoket to DEC Austin who suggested that Vought ask former employee Tomasello and DEC Tibbe if they recall any activity. Vought spoke to DEC Tibbe and he did not recall anything regarding site. Spill closed by Vought and Final ISR submitted to DEC Austin for review.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V

of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"ARAKHAN 10/30/02REMOTE FILLS ON TWO HI-TEST TANKS CEMENTED OVER; REG TANK NOT INVESTIGATED YET. CONTRACTOR NOT SURE WHETHER TANKS OR PIPING OR BOTH LEAKING. WILL RECOMMEND TO OWNER TO ISOLATE TANKS AND PIPING AND RE-TEST. TANK TEST FAILURE LETTER MAILED 10/30/02.12/5/2003-Vought-Spill transferred from Rommel to Vought. See also open spill #'s 0230040 and closed spill 0211730 at same location.12/31/03 (KMF)2/5/03 Received letter from BP regulatory compliance, Paula Skryja. All tanks were precision tested on 10/30/02 and failed. Tanks were immediately removed from service. Were investigated and retested 12/3/02. Regular tank passed but super tank still had "bubbles" sounding and was still "tied to other super tank." The super tanks were uncovered and isolated. Retest was conducted on 12/11/02 with both super tanks passing. Copy of results on file.

Remarks: test was vacu tech thier were three tanks that failed.they will uncover and isolate tanks.

BROWNFIELDS:

Program: BCP
Site Code: 363636
Site Description: Location: The site is located in urban area on a triangularly shaped parcel in the upper west side of Manhattan, at the northeast corner

BP SS # 17889 (Continued)

U000396443

of Broadway and Nagle Avenue. The area is referred as the Inwood section of upper Manhattan and the site is approximately 0.36 acres in size. Site Features: The whole footprint of the site is now paved and fenced with a lockable gate. There is a small one story building at the east corner which is used by the parking attendant. Current Zoning/Uses: The site's zoning district is C2-2/R-7-2 which is used for commercial and residential purposes. Currently, the site is used for a 24 hour parking facility, but until 2005 was used as a gasoline service station. The surrounding parcels are currently used for a combination of commercial and residential purposes. Adjacent to the site on the north side is an eight story residential apartment building; Intermediate School (IS) #218 is located further north; an open space and outdoor recreation area for IS #218 is located just northeast of the site. Fort Tryon Park is located west of the site across Broadway. Historic Uses: From the 1920s through the 1950s, the site was used as a gasoline service station and auto repair shop. After that period until 2005, the site was used as only a gasoline service station under several ownerships. Prior use that appears to have led to site contamination includes leaks and spills from gasoline service operations and auto repair activities. During October 2005 all underground storage tanks (USTs) which had been used for gasoline/petroleum products, were removed for disposal off-site. During this removal noticeable petroleum staining of subsurface soil was detected. A Brownfield Cleanup Agreement was executed in September 2006. Site Geology and Hydrogeology: The site is located approximately 30 feet above mean sea level. The site stratigraphy (from the ground surface down) consists of six inches of concrete or asphalt followed by a layer of six inches of sand; below that there is fill material which consists of coarse and fine sand, some silt, with varying amounts of coal, brick, wood and glass, encountered to a depth of approximately 11 feet below ground surface (bgs). Depth of groundwater ranges from 7 feet to 12 feet bgs and flows towards the east, southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern at the site include the petroleum related contaminants benzene, toluene, ethylbenzene, xylene (BTEX) and methyl tertiary butyl ether (MTBE), as well as the chlorinated solvent tetrachloroethene (PCE) in soil, groundwater and in soil vapor. The highest concentrations of petroleum contamination were found in the soil samples collected from near the bottom of the underground storage tank (UST) excavation located in the southwest side of the site. Benzene was detected at concentrations up to 7.3 parts per million (ppm), which exceeds the soil cleanup objective (SCO) for unrestricted use (0.06 ppm). Ethylbenzene (1 ppm to 150 ppm), toluene (0.7 ppm to 290 ppm), xylenes (mixed) (0.26 to 950 ppm) and MTBE (0.93 ppm to 23 ppm) were also detected at the site. Concentrations of PCE were found in on-site shallow (2.5 to 5 feet below grade) soil samples near the eastern corner of the site, behind the one story structure, at concentrations (1.3 ppm to 120 ppm) that exceed the soil cleanup objectives for the protection of groundwater (1.3 ppm). Groundwater is contaminated at concentrations above groundwater standards. Groundwater samples taken on-site (or immediately adjacent to the site) had maximum concentrations of BTEX and MTBE of: 204 ppb for benzene (standard is 1 ppb); 26 ppb for toluene (standard is 5 ppb); 118 ppb for ethylbenzene (standard is 5 ppb); 240 ppb for xylene (standard is 5 ppb); and 21 ppb for MTBE (standard is 10 ppb). PCE

BP SS # 17889 (Continued)

U000396443

was detected above its groundwater standard (5 ppb) in one on-site groundwater sample near the eastern corner of the site at a concentration of 17.1 ppb. PCE was also detected above its groundwater standard at one off-site location on the south side of Nagle Avenue at a concentration of 10.8 ppb; this detection was determined to not be site related because it is sidegradient from the site and there are groundwater samples between the site and this location where PCE was not detected. Degradation products of PCE (cis-1,2 dichloroethene and vinyl chloride) were also found in groundwater. The maximum on-site concentration of cis-1,2 dichloroethene was 7.12 ppb (standard 5 ppb). Vinyl chloride (44 ppb vs. the standard of 2 ppb) was detected at an off-site location (sidewalk) immediately adjacent to the site. The highest concentration of PCE detected in on-site soil vapor samples was 5,280,000 micrograms per cubic meter (g/m³). Elevated, but significantly lower concentrations of PCE and its associated degradation products were also detected in off-site soil vapor samples. Approximately 100 feet downgradient (southeast) from the site along the northern sidewalk of Nagle Avenue the PCE and vinyl chloride concentrations in soil vapor were 136 and 187 g/m³ respectively. The highest PCE concentration in off-site soil vapor detected was on the south side of Nagle Avenue at a concentration of 1,051 g/m³; as discussed for the groundwater contamination above, the detection of PCE on the south side of Nagle Avenue is not site related. BTEX and MTBE were also detected in on-site soil vapor and their concentrations were 230,650 and 9,660 g/m³ respectively. Sub-slab and indoor air sample results were compared with New York States Soil Vapor Intrusion Guidance to evaluate the Soil Vapor Intrusion (SVI) in four surrounding structures. Results indicate that No Further Action is recommended for two structures, and Take reasonable and practical actions to identify sources and reduce exposures is recommended for one structure. Monitor/Mitigate is recommended for another structure (based on sub-slab vapor sample results) but this structure is located on the south side of Nagle Avenue. As discussed above, the detection of PCE on the south side of Nagle Avenue is not site related. Special Resources Impacted/Threatened: The site is located in the urban area and a Fish and Wildlife Impact Analysis is not warranted.

Health Problem: Since the site is covered with asphalt and concrete, contact with contaminated soils and groundwater is unlikely unless persons dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water system not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Vapor intrusion concerns are limited to one off-site building and are due to a contaminant source unrelated to this site.

S105998678

Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 88633
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"DEC Sigona sent tank test failure notice on April 14, 2003.4/24/03 TJDtank failed 2nd test today. New spill 0300863 generated, new spill has been closed and cross-referenced. Mary Hack was contacted (212)645 7333. Mary states tank will be uncovered and inspected next week. She will call duty desk with the schedule for that work.5/1/03 retest scheduled for next week.8/28/03 TJDspoke with John Leddy. Work plan has been approved. Pro Test to notify DEC a minimum of 48 hours prior to commencement of field investigation.1/7/03 TJDclosure report submitted. Sampling revealed low level SVOC contamination in all samples. PBS registration indicates the product stored in tank is #6 oil, however, Protest submittals state product stored in tank is #2 oil. This was confirmed in discussion with John Leddy (Protest) on this date. Site does not meet standards. As the exceedances to TAGM are all SVOC constituents and concentrations appear to be consistent in all sample locations the exceedances are indicative of urban fill. As such, spill is closed.

Remarks: Tank to be drained and cleaned and then retested.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE
