DER Facility ID: 85041
DEC Memo: "TTF Letter was sent to: One Sickles Street Co 1841 Broadway - Suite 1000 New York, NY 10023 07/16/13 - Spill Case is transferred from Moses Ajoku (PBS Unit) to Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 01/28/2014 - V. Brevdo As per Spill Report, this TTF spill was a dry leak and no product has been released. 5,000 gallon aboveground tank in contact with soil received PBS Certificate on 01/04/2012 which expires on 03/24/2017. Apartment building is a 6 story building and human exposure is unlikely due to dry leak. The Department determined that there is no benefit to the environment or human health in continue keeping this spill case open. Spill case is closed effective 01/28/2014. No spill closure letter is sent. VB"

Remarks: "A gross dry leak on a tank test resulted in a failure. No product was lost."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

VOUGHT ARAKHAN 10/30/02 REMOTE FILLS ON TWO HI-TEST TANKS CEMENTED OVER; REG TANK NOT INVESTIGATED YET. CONTRACTOR NOT SURE WHETHER TANKS OR PIPING OR BOTH LEAKING. WILL RECOMMEND TO OWNER TO ISOLATE TANKS AND PIPING AND RE-TEST. TANK TEST FAILURE LETTER MAILED 10/30/02. 12/5/2003-Vought-Spill transferred from Rommel to Vought. See also open spill #'s 0230040 and closed spill 0211730 at same location. 12/31/03 (KMF) 2/5/03 Received letter from BP regulatory compliance, Paula Skryja. All tanks were precision tested on 10/30/02 and failed. Tanks were immediately removed from service. Were investigated and retested 12/3/02. Regular tank passed but super tank still had bubbles sounding and was still tied to other super tank. The super tanks were uncovered and isolated. Retest was conducted on 12/11/02 with both super tanks passing. Copy of results on file."
Remarks: "test was vacu tech thier were three tanks that failed. they will uncover and isolate tanks. "

assigned to DEC Sadique Ahmed as he is BCP Project Manager. Spill assigned to Ahmed and email sent to DEC Aversa, O'Connell, Cozy and Ahmed notifying them of spill. 4/26/2010: Current status: During off-site delineation under BCP (4566 Broadway, C231054), an inch of free product was found in a well just down gradient of the site (sidewalk). The site was a former gas station. The applicant (participant) initiated monthly bailing out event on 2/16/2010. S.Ahmed 5/26/2010: Current status: During off-site delineation under BCP (4566 Broadway, C231054), an inch of free product was found in a well just down gradient of the site (sidewalk). The applicant initiated monthly bailing out event from Jan 10. No LPH was detected during last couple of month. S.Ahmed 6/28/2010: Current status: During off-site delineation under BCP (4566 Broadway, C231054), an inch of free product was found in a well just down gradient of the site (sidewalk). The applicant initiated monthly bailing out event from Jan 10. No LPH was detected so far. S.Ahmed 8/26/2010: Current status: During off-site delineation under BCP (4566 Broadway, C231054), an inch of free product was found in a well just down gradient of the site (sidewalk). Monthly gauging and bailing out event initiated in Jan 10. LPH was detected only one time. S.Ahmed 9/24/10 - Austin - I closed spill #0230040, which refers to contamination on this site, and referred it to the activities going on underneath this spill report - end 10/26/2010: Current status: During off-site delineation under BCP (4566 Broadway, C231054), 1 of LPH was found in a MW sidewalk). Monthly gauging and bailing out event initiated in Jan 10. LPH was detected only one time. Open spill #0230040 was closed by R2 and consolidated S.Ahmed 12/20/2010: Current status: During off-site delineation under BCP (4566 Broadway, C231054), 1 of LPH was found in a sidewalk MW). Monthly gauging and bailing out event initiated in Jan 10. LPH was detected only one time. Open spill #0230040 was closed by R2 and consolidated S.Ahmed 02/23/2011: Current status: During off-site delineation under BCP (4566 Broadway, C231054), 1 of LPH was found in a sidewalk MW. Monthly gauging is now discontinued. LPH was detected only one time. Open spill #0230040 was closed by R2 and consolidated under this spill. S.Ahmed 06/23/2011: Current status: During off-site delineation under BCP (C231054), 1 of LPH was found in a sidewalk MW. LPH was detected only one time. Draft RIR for the BCP project is under review. Open spill #0230040 was closed by R2 and consolidated under this spill. S.Ahmed 09/23/2011: Current status: During off-site delineation under BCP (C231054), 1 of LPH was found in a sidewalk MW. LPH was detected only one time. Remedial action expecting early of 2012. Open spill #0230040 was closed by R2 and consolidated under this spill. S.Ahmed 05/29/2011: Current status: During off-site delineation under BCP (C231054), 1 of LPH was detected in a sidewalk MW. LPH detected once only. RIR approved. After finalizing the decision document the remedial action expecting late of 2012. Spill #0230040 was consolidated under this spill. S.Ahmed 12/20/2012: Current status: During off-site delineation under BCP (C231054), 1 of LPH was detected in a sidewalk MW. LPH detected only one time. RIR approved. Approvable alternative analysis report and RWP received. Proposed decision document for remedy has been prepared. Remedial action expecting mid of 2013. S.Ahmed 05/28/2013: Current status: During off-site delineation under BCP (C231054), 1 of LPH was detected in a sidewalk MW. LPH detected only one time. RIR approved. Decision Document (DD) signed by the bureau Director and RWP was approved. Remedial action is expecting during the summer of 2013.

ENG CONTROLS:

Site Code: 363636
HW Code: C231054
Control Code: 15
Control Type: ENG
Date Record Added: 11/06/2014
Date Rec Updated: 04/28/2017
Updated By: SXAHMED
Site Description:

Location: The site is located in urban area on a triangularly shaped parcel in the upper west side of Manhattan, at the northeast corner of Broadway and Nagle Avenue. The area is referred as the Inwood section of upper Manhattan and the site is approximately 0.36 acres in size. Site Features: The whole footprint of the site is now paved and fenced with a lockable gate. There is a small one story building at the east corner which was previously used by the parking attendant and currently holds all SVE system equipment. Current Zoning/Uses: The site's zoning district is C2-2/R-7-2 which is used for commercial and residential purposes. Currently, the site is used for a 24 hour parking facility, but until 2005 was used as a gasoline service station. The surrounding parcels are currently used for a combination of commercial and residential purposes. Adjacent to the site on the north side is an eight story residential apartment building; Intermediate School (IS) #218 is located further north; an open space and outdoor recreation area for IS #218 is located just northeast of the site. Fort Tryon Park is located west of the site across Broadway. Historic Uses: From the 1920 s through the 1950 s, the site was used as a gasoline service station and auto repair shop. After that period until 2005, the site was used as only a gasoline service station under several ownerships. Prior use that appears to have led to site contamination includes leaks and spills from gasoline service operations and auto repair activities. During October 2005 all underground storage tanks (USTs) which had been used for gasoline/petroleum products, were removed for disposal off-site. During this removal noticeable petroleum staining of subsurface soil was detected. A Brownfield Cleanup Agreement was executed in September 2006. Site Geology and Hydrogeology: The site is located approximately 30 feet above mean sea level. The site stratigraphy (from the ground surface down) consists of six inches of concrete or asphalt followed by a layer of six inches of sand; below that there is fill material which consists of coarse and fine sand, some silt, with varying amounts of coal, brick, wood and glass, encountered to a depth of approximately 11 feet below ground surface (bgs). Depth of groundwater ranges from 7 feet to 12 feet bgs and flows towards the east, southeast.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site include the petroleum related contaminants benzene, toluene, ethylbenzene, xylene (BTEX) and methyl tertiary butyl ether (MTBE), as well as the chlorinated solvent tetrachloroethene (PCE) in soil, groundwater and in soil vapor. Remedial actions includes limited excavation and off-site disposal of PCE contaminated soil, and installation of Soil Vapor Extraction (SVE) system. Completed remedial actions have successfully achieved soil cleanup objectives

for restricted residential and commercial uses. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Special Resources Impacted/Threatened: The site is located in the urban area and a Fish and Wildlife Impact Analysis is not warranted.

Health Problem: Since the site is covered with asphalt and concrete, contact with contaminated soils and groundwater is unlikely unless persons dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water system not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Vapor intrusion concerns are limited to one off-site building and are due to a contaminant source unrelated to this site.

Site Code: 363636

Site Description: Location: The site is located in urban area on a triangularly shaped parcel in the upper west side of Manhattan, at the northeast corner of Broadway and Nagle Avenue. The area is referred as the Inwood section of upper Manhattan and the site is approximately 0.36 acres in size. Site Features: The whole footprint of the site is now paved and fenced with a lockable gate. There is a small one story building at the east corner which was previously used by the parking attendant and currently holds all SVE system equipment. Current Zoning/Uses: The site's zoning district is C2-2/R-7-2 which is used for commercial and residential purposes. Currently, the site is used for a 24 hour parking facility, but until 2005 was used as a gasoline service station. The surrounding parcels are currently used for a combination of commercial and residential purposes. Adjacent to the site on the north side is an eight story residential apartment building; Intermediate School (IS) #218 is located further north; an open space and outdoor recreation area for IS #218 is located just northeast of the site. Fort Tryon Park is located west of the site across Broadway. Historic Uses: From the 1920 s through the 1950 s, the site was used as a gasoline service station and auto repair shop. After

that period until 2005, the site was used as only a gasoline service station under several ownerships. Prior use that appears to have led to site contamination includes leaks and spills from gasoline service operations and auto repair activities. During October 2005 all underground storage tanks (USTs) which had been used for gasoline/petroleum products, were removed for disposal off-site. During this removal noticeable petroleum staining of subsurface soil was detected. A Brownfield Cleanup Agreement was executed in September 2006. Site Geology and Hydrogeology: The site is located approximately 30 feet above mean sea level. The site stratigraphy (from the ground surface down) consists of six inches of concrete or asphalt followed by a layer of six inches of sand; below that there is fill material which consists of coarse and fine sand, some silt, with varying amounts of coal, brick, wood and glass, encountered to a depth of approximately 11 feet below ground surface (bgs). Depth of groundwater ranges from 7 feet to 12 feet bgs and flows towards the east, southeast.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site include the petroleum related contaminants benzene, toluene, ethylbenzene, xylene (BTEX) and methyl tertiary butyl ether (MTBE), as well as the chlorinated solvent tetrachloroethene (PCE) in soil, groundwater and in soil vapor. Remedial actions includes limited excavation and off-site disposal of PCE contaminated soil, and installation of Soil Vapor Extraction (SVE) system. Completed remedial actions have successfully achieved soil cleanup objectives for restricted residential and commercial uses. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Special Resources Impacted/Threatened: The site is located in the urban area and a Fish and Wildlife Impact Analysis is not warranted.

Health Problem: Since the site is covered with asphalt and concrete, contact with contaminated soils and groundwater is unlikely unless persons dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water system not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Vapor intrusion concerns are limited to one off-site building and are due to a contaminant source unrelated to this site.

Site Code: 363636

Site Description: Location: The site is located in urban area on a triangularly shaped parcel in the upper west side of Manhattan, at the northeast corner of Broadway and Nagle Avenue. The area is referred as the Inwood section of upper Manhattan and the site is approximately 0.36 acres in size. Site Features: The whole footprint of the site is now paved and fenced with a lockable gate. There is a small one story building at the east corner which was previously used by the parking attendant and currently holds all SVE system equipment. Current Zoning/Uses: The site's zoning district is C2-2/R-7-2 which is used for commercial and residential purposes. Currently, the site is used for a 24 hour parking facility, but until 2005 was used as a gasoline service station. The surrounding parcels are currently used for a combination of commercial and residential purposes. Adjacent to the site on the north side is an eight story residential apartment building; Intermediate School (IS) #218 is located further north; an open space and outdoor recreation area for IS #218 is located just northeast of the site. Fort Tryon Park is located west of the site across Broadway. Historic Uses: From the 1920 s through the 1950 s, the site was used as a gasoline service station and auto repair shop. After that period until 2005, the site was used as only a gasoline service station under several ownerships. Prior use that appears to have led to site contamination includes leaks and spills from gasoline service operations and auto repair activities. During October 2005 all underground storage tanks (USTs) which had been used for gasoline/petroleum products, were removed for disposal off-site. During this removal noticeable petroleum staining of subsurface soil was detected. A Brownfield Cleanup Agreement was executed in September 2006. Site Geology and Hydrogeology: The site is located approximately 30 feet above mean sea level. The site stratigraphy (from the ground surface down) consists of six inches of concrete or asphalt followed by a layer of six inches of sand; below that there is fill material which consists of coarse and fine sand, some silt, with varying amounts of coal, brick, wood and glass, encountered to a depth of approximately 11 feet below ground surface (bgs). Depth of groundwater ranges from 7 feet to 12 feet bgs and flows towards the east, southeast.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site include the petroleum related contaminants benzene, toluene, ethylbenzene, xylene (BTEX) and methyl tertiary butyl ether (MTBE), as well as the chlorinated solvent tetrachloroethene (PCE) in soil, groundwater and in soil vapor. Remedial actions includes limited excavation and off-site disposal of PCE contaminated soil, and installation of Soil Vapor Extraction (SVE) system. Completed remedial actions have successfully achieved soil cleanup objectives for restricted residential and commercial uses. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Special Resources Impacted/Threatened: The site is located in the urban area and a Fish and Wildlife Impact Analysis

is not warranted.

Health Problem: Since the site is covered with asphalt and concrete, contact with contaminated soils and groundwater is unlikely unless persons dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water system not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Vapor intrusion concerns are limited to one off-site building and are due to a contaminant source unrelated to this site.

This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Vapor intrusion concerns are limited to one off-site building and are due to a contaminant source unrelated to this site.

BROWNFIELDS:

Program: BCP
Site Code: 363636
Acres: 0.36
HW Code: C231054
SWIS: 3101
Town: New York City
Record Added Date: 05/08/2006
Record Updated Date: 03/08/2017
Update By: JXGRECO

Site Description: Location: The site is located in urban area on a triangularly shaped parcel in the upper west side of Manhattan, at the northeast corner of Broadway and Nagle Avenue. The area is referred as the Inwood section of upper Manhattan and the site is approximately 0.36 acres in size. Site Features: The whole footprint of the site is now paved and fenced with a lockable gate. There is a small one story building at the east corner which was previously used by the parking attendant and currently holds all SVE system equipment. Current Zoning/Uses: The site's zoning district is C2-2/R-7-2 which is used for commercial and residential purposes. Currently, the site is used for a 24 hour parking facility, but until 2005 was used as a gasoline service station. The surrounding parcels are currently used for a combination of commercial and residential purposes. Adjacent to the site on the north side is an eight story residential apartment building; Intermediate School (IS) #218 is located further north; an open space and outdoor recreation area for IS #218 is located just northeast of the site. Fort Tryon Park is located west of the site across Broadway. Historic Uses: From the 1920 s through the 1950 s, the site was used as a gasoline service station and auto repair shop. After that period until 2005, the site was used as only a gasoline service station under several ownerships. Prior use that appears to have led

to site contamination includes leaks and spills from gasoline service operations and auto repair activities. During October 2005 all underground storage tanks (USTs) which had been used for gasoline/petroleum products, were removed for disposal off-site. During this removal noticeable petroleum staining of subsurface soil was detected. A Brownfield Cleanup Agreement was executed in September 2006. Site Geology and Hydrogeology: The site is located approximately 30 feet above mean sea level. The site stratigraphy (from the ground surface down) consists of six inches of concrete or asphalt followed by a layer of six inches of sand; below that there is fill material which consists of coarse and fine sand, some silt, with varying amounts of coal, brick, wood and glass, encountered to a depth of approximately 11 feet below ground surface (bgs). Depth of groundwater ranges from 7 feet to 12 feet bgs and flows towards the east, southeast.

Env Problem:

Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site include the petroleum related contaminants benzene, toluene, ethylbenzene, xylene (BTEX) and methyl tertiary butyl ether (MTBE), as well as the chlorinated solvent tetrachloroethene (PCE) in soil, groundwater and in soil vapor. Remedial actions includes limited excavation and off-site disposal of PCE contaminated soil, and installation of Soil Vapor Extraction (SVE) system. Completed remedial actions have successfully achieved soil cleanup objectives for restricted residential and commercial uses. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Special Resources Impacted/Threatened: The site is located in the urban area and a Fish and Wildlife Impact Analysis is not warranted.

Health Problem:

Since the site is covered with asphalt and concrete, contact with contaminated soils and groundwater is unlikely unless persons dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water system not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Vapor intrusion concerns are limited to one off-site building and are due to a contaminant source unrelated to this site.

FINDS:

Registry ID: 110018887481

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019127489

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 39

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DER Facility ID: 88633
 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO DEC Sigona sent tank test failure notice on April 14, 2003. 4/24/03 TJD Tank failed 2nd test today. New spill 0300863 generated, new spill has been closed and cross-referenced. Mary Hack was contacted (212)645 7333. Mary states tank will be uncovered and inspected next week. She will call duty desk with the schedule for that work. 5/1/03 retest scheduled for next week. 8/28/03 TJD Spoke with John Leddy. Work plan has been approved. Pro Test to notify DEC a minimum of 48 hours prior to commencement of field investigation. 1/7/03 TJD Closure report submitted. Sampling revealed low level SVOC contamination in all samples. PBS registration indicates the product stored in tank is #6 oil, however, Protest submittals state product stored in tank is #2 oil. This was confirmed in discussion with John Leddy (Protest) on this date. Site does not meet standards. As the exceedances to TAGM are all SVOC constituents and concentrations appear to be consistent in all sample locations the exceedances are indicative of urban fill. As such, spill is closed."

Remarks:

"Tank to be drained and cleaned and then retested."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Name: Not reported
Spiller Company: GETTY GASOLINE #58592
Spiller Address: 242 DYCKMAN ST
Spiller Company: 001
Contact Name: CALLER
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 10/15/04-Vought-Spill transferred from Rommel to Vought as per Rommel. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/17/2005 - Feng - Project reviewed by Feng: Tank Closure Report, Tyree, dated August 7, 1998. On 6/16-24, 1998, ten (10) 550-gallon (gasoline), two (2) 4000-gallon (gasoline) and one (1) 550-gallon (waste oil) were removed for Federal EPA mandate. Total of 14 soil endpoint samples were taken, among these there were 9 from gasoline tankfield excavation and 5 from waste oil tank excavation. Analyticals show moderate high concentration in soil samples. In addition, approx. 1,038 tons of impacted soils were removed from site. Quarterly Monitoring Report (8/2003 - 7/2005). 5 monitoring wells onsite. Groundwater flow easterly. No remedial system has been installed. For W-1, BTEX was below MDL and low MTBE. For W-2, both BTEX and MTBE were fluctuated/decreased/increased between a few thousands ppb and a few hundreds ppb. For W-3, BTEX and MTBE decreasing. For W-4, BTEX and MTBE have decreased from high to low concentration. For W-5, low BTEX and MTBE were detected. 10/17/2005 - Feng - No Further Action denied due to the following reason: fluctuation and tendency of increasing of BTEX and MTBE show on W-2. 691ppb BTEX and 363ppb MTBE were shown on 7/21/2005. so keep monitoring is required. 10/18/2005 - Feng - Spill#: 97-06106 has been consolidated into this spill#. 10/31/2005 - Feng - Quarterly Monitoring Report, 8/2005 - 10/2005. 5 monitoring wells onsite. Groundwater flows to east at depth of 7.68' to 8.83' bg. BTEX and MTBE increased. W-1, below MDL. W-2, increasing, 2,085 BTEX and 831 MTBE. W-3, increasing, 36 BTEX and 280 MTBE. W-4 and W-5, low or below MDL. 2/27/2006 - Feng - Quarterly Monitoring Report, 11/2005 - 1/2006. The site is an active gasoline service station. Groundwater flows to east at the depth of 7.04' to 8.09' bg. 5 monitoring wells onsite. W-1, ND, 3 ppb MTBE. W-2, decreased and 1,499 ppb BTEX, increased and 884 ppb BTEX. W-3, decreased and 15 ppb BTEX, decreased an 2 ppb MTBE. W-4, BTEX ND, 6 ppb MTBE. W-5, both ND. (RJF) 8/1/2008 - Project reassigned to Feng. 9/4/2008 - Getty Properties portfolio meeting with Tyree and Delta. Check the remaining soil contamination and how much was removed. One well downgradient to justify for closure, work plan 3/2009. Need to lower down the dissolved. (RJF) 2/5/2009 - Reviewed Investigation Work Plan, dated December 17, 2008, by Tyree. Tyree proposed to install 1 well. Field work to be scheduled early 2009. Investigation Report to be due 3/2009. Work plan is approved. (RJF) 3/17/2009 - Quarterly Monitoring Report, 6/2008 - 8/2008, 8/2008, by Tyree. Active gasoline service station. Groundwater was gauged and sampled 7/17/2008. 5 monitoring wells. NO LNAPL. DTW 8.31' to 9.65' bg. Flows to east. BTEX range ND to 1,572 ppb (W-2). MTBE range ND to 140 ppb (W-2). (RJF) 5/7/2009 - Quarterly Monitoring Report, 6/2008 - 8/2008, 11/2008, by Tyree. Active gasoline service station. Groundwater was gauged and sampled 10/16/2008. 5 monitoring wells. NO LNAPL. DTW 8.31' to 9.65' bg. flows to east. BTEX range ND to 122ppb (W-2). MTBE range ND to 55 ppb (W-2). (RJF) 6/9/2009 - Reviewed Subsurface Investigation Report, dated 5/13/2009, pdf via email on 5/13/2009, by Tyree. On 4/21/2009, Tyree oversaw Associated Environmental Services during the

installation of MW-6. MW-6 was installed approximately 25 feet bgs. No PID reading. Bedrock at 11 feet. 2 soil samples were collected, at 0-5 feet and 5-7 feet, no exceedance of VOCs. Groundwater was encountered at 8-10 feet, strong odor in GW was noted. 820 ug/L benzene, 5,190 ug/L ethylbenzene, 836 ug/L toluene, 19,110 ug/L xylenes, 29,956 ug/L BTEX, 4,850 ug/L 1,2,4-Trimethylbenzene, 1,330 ug/L 1,3,5-Trimethylbenzene. (RJF) 6/10/2009 - Quarterly Monitoring Report, 10/2008 1/2009, 2/2009, pdf via email 5/29/2009, by Tyree. Active Getty gasoline service station. Groundwater was monthly gauging and quarterly sampling. Groundwater was sampled 1/21/2009. 5 monitoring wells. DTW 8.32 to 9.64 bg. Flows to southeast. NO LNAPL. BTEX range ND to 2,344 ppb (W-2). MTBE range ND to 89 ppb (W-2). 12/4/2009 - Quarterly Monitoring Report, 7/2009-9/2009, 10/2009, by Tyree. Active Getty service station. Groundwater was monthly gauged, 9/1/2009, 9/25/2009 and 10/23/2009. DTW 7.71' to 9.23' bg. Flows to southeast. NO LNAPL. Groundwater was sampled on 10/23/2009. BTEX range ND to 14,789 ppb (MW-6). MTBE range ND to 25 ppb (MW-2). There are currently no remote fills at this site as shown on the current as-built site plan. During the installation of MW-6 in 5/2009, bedrock was encountered at 11' bg. Drilling refusal was encountered at 3 feet bg at five different step off locations during 5/2000 subsurface drilling investigation. SIR will be submitted 3/2010. (RJF) 6/4/2010 - 1Q2010, 1/2010 - 3/2010, 5/2010, by Tyree. Active Getty Service station. Monthly gauged on 1/19/2010, 2/17/2010 and 3/22/2010. Quarterly sampled on 2/17/2010. 6 monitoring wells. NO LNAPL. DTW 7.55 (W-5) to 9.94 (W-2). Flows to southeast. BTEX range ND to 27,559 ug/L (W-6). MTBE range ND to 12.6 ug/L (W-2). An investigation work plan was submitted on 4/2/2010 to delineate soil and groundwater impacts in the vicinity of W-2 and W-6. Subsurface Investigation Work Plan, dated 3/31/2010, by Tyree. Tyree proposes to install 3 monitoring wells to delineate the northwest, southeast and northeast of W-2 and W-6. work plan is approved. email to Joe King (Tyree) The work plan is approved, I will send you the approval letter next Monday. You can start scheduling the field work in the meantime. since all the other wells are overburden wells and they indicate impacts above the bedrock already. We do not require bedrock wells in case no groundwater is hit in the new wells installation, but you still need to collect soil samples. In case you encounter really wet/moisture soil, you may consider putting the well there. 6/8/2010 - Approval letter to Getty Properties. Investigation report due 9/2010. 12/8/2011 - Reviewed 3Q2011, 10/2011, by Tyree. Only the Figure was attached. Max BTEX 11,386 ug/L (MW-6). Tyree requests the approval of Ozone injection. 2/1/2012 Getty portfolio transferred to KGH. 5/18/2012 - KGH approves ozone injection pilot 12/17/2013 - Tyree requests NFA on behalf of Getty 5/27/2014 - The Department has reviewed and hereby approves Tyree's request for No Further Action. NFA. KGH "

Remarks:

"caller pulling tanks found contaminated soil. ORIGINAL SPILL ASSIGNED TO O'DOWD."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

VOUGHT SEE 9313203 TRANSFERRED FROM TIBBE TO VOUGHT. 04/12/04
Transferred from Tang to Sun. (JS/MS) 12/18/06 Sun sent letter
certified mail to Maxamillian Fried (Max and Romy Gas Station 131-0
Hillside Ave, Queens) at 13111 Kew Gardens Rd, Jamaica, on 12/14/06
requiring that the following be submitted to the NYSDEC by 1/14/07:
1. Tank closure assessment report. 2. Locations of tank and/or line
test failure. 3. Subsurface investigation report, including current
and historical soil and groundwater analysis. 4. Surrounding property
sketch: A surrounding property sketch including property layout and
usage must be submitted to NYSDEC. North arrow and scale must also be
included on the site plan. If no tank closure report was prepared or
no subsurface investigation was conducted before, the Department
requires the following be performed and submitted: 1. Submission of a
Tank Closure & Site Assessment Including Soil and Groundwater
Investigation Results. (JS/MS) 6/14/07: Sun sent above letter
certified mail to Maxamillian Fried to site location at 131-0
Hillside Ave, Queens on 6/14/07 requiring that the following be
submitted to the NYSDEC by 7/20/07 as original letter was returned to
DEC as unclaimed. (JS/MS) 8/1/07: 2nd letter was also returned - DEC
staff to perform site visit. (JS/MS) 8/20/07: See Acris. (JS/MS)
10/31/07: MS did search for property info and ownership. Found a
couple old spill reports that are likely related to this one. See
spill #9701436 and 9313203. Gene Sullivan responded to 9313203. MS to
search files. (JS/MS) 1/29/08: RP may also be Armand Fried. See
folder for contact info and send letter. (MS) 2/27/08: Received Phase
II for site from HTE. (JS/MM) 3/11/08: NFA issued. (JS/MM)"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID: 273402
DEC Memo: "3/1/05-Vought-Spill response off hours duty-Vought called Farrantino Oil and spoke with mark Loughlin (646-235-9752) and crew on way to site. Spill result of tank overfill. Spil came out vent pipe onto sidewalk and out of fittings on AST in secondary containment room. Vought called DEP Gilmore and spill call originated from NYC Hotline (no onwer information). Vouht performed site visit and Petroleum Tank Cleaners (PTC) onsite (Anthony Lara 718-624-4842) and cleaning up sidewalk. Vought instructed PTC to vacuum out drain on Corner of Academy and Vermilyea. Drain was vacuumed and secondary containment room was inspected and speedy dry was put down (about 10-15 gallons spilled in secondary containment). No odors present in building or in basement. Spill on concrete and in drain (DEP notified) with no pathways to subsurface> Spill closed by Vought"

Remarks: "Tank overfill caused 100 gallons of home heating oil to spill outside. Sewer is affected. Cleanup has begun."

DEC Memo: "06/08/17 - Lakhani There is a single wall 1080 gallon #2 fuel oil tank on the property. The tank was abandoned by cutting the lines in the building. AARCO was hired as the contractor to test the tank. The tanks failed and wet leak was found. There is 24 of product in the tank. The park department compliance department contact is Justin (212-360-3433). 06/12/17 - Lakhani Spoke Justin from NYC Parks Compliance Dept. and he informed that AARCO will be draining the tank either today or tomorrow and will investigate the tank to determine whether the tank can be repaired or removed. 06/13/17 - Lakhani Justin called to inform that in addition to the 1080 gallon tank, there are two (2) 275 gallons tanks in the basement of the property. All three (3) tanks will be registered with PBS. NYC Parks is leaning towards total closure of the 1080 gallon tank because the building will be converting to gas. Justin is awaiting an estimate from AARCO to remove the tank."

has been closed in database. Demeo left message for Rene Lewis (Eastmond) requesting summary of activities, laboratory data and disposal manifests specific to Spill #0105052. 08/04/2005: Fax sent to Rene Lewis of A.L. Eastmond requesting information on spill. M.Brand NYSDEC DER Albany. 08/19/2005: Next step - attempt to obtain correct spill closure report from Rene Lewis of Eastmond & Sons Boiler Repair. See paper file. LNK. 11/08/2005: Contacted Petroleum Tank Cleaners, Inc. (718-624-4842, Lisa) regarding spill 0105052. Original spill for property (0102593) occurred in June 2001, spill was cleaned up by A.L. Eastmond and Petroleum Tank Cleaners between 06/08 and 06/27 (invoice from Petroleum Tank Cleaners and letter from Eastmond in file). Tank was apparently not removed during the initial spill cleanup. The first spill (0102593) was deemed to be properly cleaned up by Region 2 Spills staff and closed 10/12/2001. Later spill (0105052) occurred in August 2001 due to a tank overflow (apparently from a fuel delivery to the original tank). PBS database indicates old tank was removed on October 11, 2001, new 5,000-gallon tank installed October 25, 2001 (NYC building permit issued 10/23/2001). PBS seems to be up to date, registration expires 04/2006. Updated Contacts: Owner - Pinnacle Management Company One Penn Plaza POB 1919 New York, NY 10119 212-564-2111 fax 212-695-4848 Summitt Transportation - no current info available, telephone not valid. Petroleum Tank Cleaners, Inc. 236 Butler Street Brooklyn, NY 11217 718-624-4842 fax 718-858-4268 (Contact: Lisa, Isaac Mungra no longer with company) 08/18/2006: No additional information, spill site needs to be inspected to determine if cleanup is complete. Transferred back to Region 2. M.Brand NYSDEC DER Albany. 10/2/09 - Austin - Spill transferred from Albany staff to Ketani, for further investigation - end 10/7/09 - Raphael Ketani. Presently, there are no E-docs. The spill happened on 8/9/01 as an overflow to the original tank. Spill was called in by Isaac Mungra of Petroleum Tank Cleaners (718) 624-4842. Jose Lopez (917) 777-0404 was the building manager at the time. According to Property Shark, the site is a large, brick veneer, 6 story apartment building that was built about 1920. The block and lot are 2170 and 96. Broadway Realty I Co., LLC sold the property to Hillside Realty Co., LLC on 1/11/99. Alternate addresses are 4526 to 4536 Broadway. The PBS registration is #2-331856. There was an original 5,000 gal. tank AST that had #6 oil. It leaked earlier in 2001 (see spill case #0102593) and lost 1,000 gals. into the tank room and the boiler room. About 800 gals. was recovered. The tank was removed on 10/11/01. The case was closed 10/12/01. A new 5,000 gal. tank was installed on 10/25/01 and is listed as containing #6 oil, but the spill report lists 200 gals. of #2 oil as having been spilled. The present spill case was the result of a delivery to the old tank by mistake, which hadn't been removed yet. I tried to find Summitt Transportation in the phone books and on the internet, but I couldn't locate the correct company. I contacted Lorraine ((212) 564-2111, ext 3118) in the Building Violations Dept. of Pinnacle Management. I explained to her that the DEC didn't have any documentation proving that the 8/9/01 spill had been cleaned up. She said that she will look into the matter and get back to me. 12/15/09 - Raphael Ketani. I made an unannounced site visit. So I called up Mark Barhorin (646) 210-7142, the property manager. He called the super and told him to meet me in the lobby. I met the super., Mr. Mrsad (646) 529-3638. He said that he wasn't the super. at the time of the spills. He showed me the boiler room. It was odor free with no signs of the previous spills. There was no oil in the sump (see

S105135076

Remarks: E-docs). I asked him to show me the tank room, but we couldn't find it. I left after this. Lorraine called me back. She said that she couldn't find any documentation regarding the latter spill. As the previous spill (#0102593) had been cleaned up (see E-docs for PTC invoice and Eastmond Closure Report), and as there were no signs of the oil that had entered the boiler room during the latter spill (#0105052), and as there was no oil in the sump, and as there were no oil odors, I have determined that there is no threat to people or the environment. Therefore, I am closing the spill case. "

DEC Memo:	"4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL THIS SPILL TRANSFERRED FROM SULLIVAN TO M. TIBBE ON 12-22-00. 06/23/2005-RSHough-Spill documentation indicates that tanks, which originally failed tank testing were closed, apparently in place and filled with sand. There is no record of the tanks, or the location in the PBS database. In 1992, the property was converted from oil burners to gas burners, and connected to the existing gas service. Original DEC Spill records classify this as an E6 spill.(Investigation indicates there was no spill and Corrective Action Not Required or Not Possible). Property research documentation (PropertyShark)correlates with this information.This Category E6 spill is thus administratively closed. "
Remarks:	"(4) 550 GALLON TANKS FAILED AIR PRESSURE TEST, NYCFD AT TEST & ISSUED VIOLATION #162, WILL EXCAVATE & ISOLATE. TANKS FILLED WITH SAND, WILL BE REMOVED ANDREPLACED IN FUTURE. NO GROUNDWATER CONTAMNATN"

DEC Memo: "9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 10/31/06 - Raphael Ketani. No record was found. The last known contact was John Weatherow at (718) 595-6700. This may be a NYC DEP number. The tank was tested and it failed. It was assumed or determined that 1000 gal. of #6 oil was lost. The incident was reported to DEC by the NYFD (no phone number). Cleanup was taking place via a collection tank and Winston Contracting was doing the repair. A 10/1/93 plan was prepared to either replace or abandon the existing tank. The responsible party is Inwood Tower. The address does not show up in the NYC Property Tax Records or Property Shark. According to Map #1 in the Hagstrom, Fort George Hill is not the official name of the street in that part of Manhattan. The official name is Saint Nicholas Avenue with Fort George Hill in parentheses. The zip is 10040 and the phone is (212) 567-0264 from the 2006 Manhattan White Pages phone book. However, this is a FAX number. So I sent a Faxed letter and a certified mail letter. I checked for a PBS record. The PBS case is #2-210684. The address is Inwood Tower Inc., 11 Fort George Hill, NY, 10040. There are 3 tanks. Two are in service and are 12000 gal. each with #2 oil and #6 oil. The third is listed as temporarily out of service and is 15000 gal. with #6 oil. Maybe this is the tank that leaked. There is a working phone number at (212) 567-0104. I left a message. I sent a FAX to (212) 567-0105. A little later, Lenny DeLuca of Century Management (212) 560-6450 (cell (917) 494-9845) called me. He asked when this spill happened. I told him and he commented that everyone from that time has left the building and he didn't think that any records were left from that time. I told him that either he finds some documentation or else the co-op will have to do some soil borings to see whether there still is contamination. He said that might costs thousands of dollars. I told him it probably would, but I don't have any documentation that any cleanup was done and so I don't have any

S106703569

recourse. He said he will try and find out what he can and he will get back to me. 11/3/06 - Raphael Ketani. Michael Jaffa of Jack Jaffa & Associates (718) 855-6110, ext 116 called me up. He said his company helps Century Management resolve various management issues. He said he received the DEC 10/31/06 letter ordering that an investigation be done. I told him some type of investigation must be done as the DEC doesn't have any documentation verifying that the spill had been cleaned up. He said he will try to look for the old records, but if he doesn't find any, then he will need time to hire a contractor and get the investigation going. I told him that I will give an extension to the deadline. 1/16/07 - Raphael Ketani. I contacted Mr. Jaffa and asked him why DEC hasn't received any documentation regarding the oil spill. He said that Mr. DeLuca was the one who was supposed to send the documentation to him. I tried to call Mr. DeLuca, but could only leave a message. Mr. DeLuca left a voice mail. He said that he spoke to Petroleum Tank Cleaners (PTC; (718) 624-4842) and they put together a proposal. He added that he is meeting with the co-op board on monday (1/22/07). His cell is (917) 494-9845. 1/24/07 - Raphael Ketani. Kal Parikh (212) 480-7240 of the NYS Division of Housing called to say that he is working with Inwood Tower (the co-op) because it is a state subsidized housing project. He said that he thought he could get ahold of all of the records for the cleanup of the site, but they are presently in an archive which is being cleaned of asbestos. Because of this, he wont be able to get to the records until sometime in April 2007. He asked whether DEC could wait that long. I said that we could. He said he will look at the files and send me what he finds. 2/1/07 - Raphael Ketani. Mark Salamack of PTC called to say that his company has not been hired to do the investigation. He said that Mr. DeLuca merely inquired as to the price for the investigation. Mr. Salamack said that PTC wants a large downpayment and so Mr. DeLuca may not hire PTC. 4/5/07 - Raphael Ketani. I tried calling Mr. DeLuca, Mr. Parikh and Mr. Jaffa, but could only leave messages stating that the DEC hasn't heard anything from them as to the existence of documentation verifying that the spill was cleaned up, or that they are doing a new investigation. I added that if DEC doesn't get word by next week that something is happening, then the case will be referred to the Div. of Legal Affairs of Region 2. 4/10/07 - Raphael Ketani. Mr. DeLuca tried to return my call and left a voice mail stating that the Division of Housing was still looking for the archived records for the spill. I left a message that it has taken too long to search for the records and that the DEC is now ordering that drilling and sampling take place. I left the same message for Mr. Jaffa. I contacted Mr. Parikh and he said he had the archived records in hand. I told him to send me the documentation very quickly regarding the oil spill and the remediation. He said he would. 4/11/07 - Raphael Ketani. Mr. Parikh called and left a voice mail. He said that the archive will send the files for the site in a few days. 4/12/07 - Raphael Ketani. Michael Jaffa of Jack Jaffa & Associates called to say that his company is not involved in the project to investigate the oil spill. He added that Century Management will have to do the project on their own. 4/18/07 - Raphael Ketani. Mr. Parikh called and left a message yesterday. He said that the archive could not provide the documents for Inwood Tower. I tried to call Mr. DeLuca (212) 560-6450 (cell (917) 494-9845) today, but could only leave a message. I stated that Century Management has to arrange for some soil borings at the site and have this done very soon as there are no documents available to

S106703569

prove there is no contamination in the subsurface. Mr. DeLuca called me back. He said that there may be analytical results in a drawer in the office of the co-op. He said that there will be a board meeting on 4/23/07 and he will look for these documents then. 5/10/07 - Raphael Ketani. Mr. DeLuca called me and said that he met with the co-op board. He said that everyone agreed to hire a consultant and to have soil sampling and testing done. 6/22/07 - Raphael Ketani. I tried to contact Mr. DeLuca at his office and at his cell, but could only leave messages. 7/9/07 - Raphael Ketani. Mr. DeLuca called me to say that he found a package of documents from 1995 and earlier at the site. He said that they document the recovery of oil at the site and the rental of equipment. He said that the package is extensive and so he can't review it completely. I asked him to send me a copy of it. He said he will. I told him that this may be enough to close the case. He said that he met with the board and they have given him permission to hire an expediter to resolve the matter, in the event that the documentation is insufficient. Mr. DeLuca called me back. He said he had a document showing that one tank was replaced. I told him to send me that, too. 8/14/07 - Raphael Ketani. I spoke to Mr. DeLuca and asked him where the package of documents were. He said his secretary had sent it out a long time ago. I told him there was nothing on my desk and nothing in the paper file. He said that he will talk to his secretary on Monday, 8/20/07, and find out from her what happened. He added that, if necessary, he will send it out again. 8/23/07 - Raphael Ketani. Mr. DeLuca (cell (917) 494-9845) called to say that his secretary is back and she isn't sure where she mailed the copies of the documents. He asked me to send him Region Two's mailing address and he will send them again. I e-mailed the regional mailing address. 9/24/07 - Raphael Ketani. I received a set of documents while I was away during the first two weeks in September. The documents are from Elm Management Associates, Inc. and date from 1994 to 1997. The documents concern monitoring and cleanup of a leaking oil tank. This also involved repair and maintenance of the oil/water separator, the recovery pit, heat wrapping for the discharge line from the separator, removal of collected oil, oil tank cleanup, and replacement of the old tank with a new 12,000 gal. tank by A.L. Eastmond. In the package with the January 27, 1997 cover letter from Elm Management is a letter from ARCH Consulting Co. dated November 1, 1995. This letter from ARCH Consulting Co. states in the bottom paragraph that they have received building plans which show that the floor slab rests on the bedrock. This suggests that the oil went into fractures in the bedrock. Where these fractures go and how deep they are is unknown and probably untraceable as the fracture systems in the bedrock in Manhattan are complex. There were no documents indicating that soil borings were performed to investigate the extent of the contamination, nor manifests for contaminated soil removed. I called up Mr. DeLuca to let him know that he still has to provide this information to the DEC. He said he will look for it. I also asked him how many tanks are in the building. He said just one. I told him 3 are listed on the PBS. He said that is wrong. I told him that the PBS registration has to be changed or else the spill case can't be closed. 9/25/07 - Raphael Ketani. Mr. DeLuca called and said he talked to the super at the building. The super told him he wasn't there when the original tank leaked. However, the super confirmed that there is only one tank presently and it is above ground on stilts. Mr. DeLuca said that he will meet with the board tonight and ask the board if they know anything about the origin of the spill for

S106703569

this case and what exactly happened. He said he will take pictures of the tank and the basement to show the present conditions and he will send me the pictures. 10/11/07 - Raphael Ketani. I spoke to Mr. DeLuca. He said that he had pictures to send me of the AST tank that is in use and the tank room. He said that everything is clean and in good condition. I asked him whether he had talked to the Board. He said Yes, and that the president of the Board remembers that there was a spill, but not much else. I told him that DEC still doesn't have a revised PBS registration, nor any evidence that the oil was cleaned up. I told him that borings will need to be done. He said that he needs to talk to the Board again and see if he can get more information regarding the spill. 10/12/07 - Raphael Ketani. As there has been no progress in resolving the spill case in one year's time, I sent a modified CSL to Mr. DeLuca. The CSL requested the revision of the PBS case to correctly reflect the tanks that are on site, an inspection of the 15,000 gal. UST to prove that it was abandoned properly, and to abandon it properly if it hasn't been done, and to do borings around the tank to determine whether contamination still exists in the subsurface and how much contamination exists. I gave Mr. DeLuca and Inwood Tower 4 weeks to submit the report. 10/18/07 - Raphael Ketani. Mr. DeLuca delivered 8 pictures of the AST and the tank room. The pictures show that the place is clean and in good condition. 10/24/07 - Raphael Ketani. I tried to contact Mr. DeLuca (212)560-6450/cell (917)494-9845 to see if he had hired a spill cleanup company, but could only leave a message. 11/7/07 - Raphael Ketani. I tried to contact Mr. DeLuca via his office phone and his cell phone, but could only leave messages. The PBS registration still has not been corrected. 12/18/07 - Raphael Ketani. Mr. DeLuca called and told me that he had a consultant with him who will do the investigative work. He put Alex Nadolishny (212) 290-6323 on from CES Environmental Consultants. I explained to Mr. Nadolishny that DEC wanted soil borings and soil sampling to be performed below the floor of the 15,000 gal. tank. I told him that the first step is for everyone to meet at the site and pick out the boring locations. We tentatively set up 1/2/08 and 1/3/06 as the meeting date. Mr. Nadolishny will get back to me. I told him to do so very soon. He said he will. 1/11/08 - Raphael Ketani. I met with Mr. DeLuca, Mr. Zygmunt (the super), Henri Gleizer (vice president of the co-op board), and Alex Nadolishny. LTB of CES Environmental & Training Center (212) 290-6233 (cell (917) 299-0551). They showed me the location of the underground tank that had failed. The tank is under the macadam pavement of the north end of the parking lot, just outside the basement back entrance. Then we examined the slope to the north of the parking lot which is just below the building and adjacent to 17 Ft. George Hill. There was no sign of an oil spill, nor any odors. The slope was covered in shrubs and grass. There was a mixed soil/fill cover. There were boulders of native material, but it wasn't clear whether they were sitting on an outcrop just below or if they had been placed there since construction of the building. We discussed what needed to be done. I told them that DEC wanted 5 new borings. One between the tank and the building, two just north of the tank and two just inside the chain line fence. There was one old well still in place. I told them to use this well, too, as an observation well. I took 10 pictures. After this, I left. 1/16/08 - Raphael Ketani. I sent a letter to Mr. DeLuca and to Mr. Nadolishny requesting that Inwood Tower do 5 soil borings, 3 around the tank and 2 next to the fence. 1/24/08 - Raphael Ketani. I spoke to Mr. DeLuca

S106703569

(917) 494-9845. He told me that Mr. Nadolishny is on vacation and will be back on 1/28/08. He said once he is back, then the plan submitted by DEC will be reviewed. He said Mr. Nadolishny will be in touch with me. 1/29/08 - Raphael Ketani. Today I was sent the following e-mail as a c-c by Mr. Nadolishny: Dear Mr. De Luca: We have coordinated the schedule for the subsurface sampling work at the 11 Fort George Hill with the drillers and Zigmund and have set the date to February 14th. The work will start at 08:00 and should be completed before 17:00. Please advise if 08:00 is too early as Geoprobe drilling produces some noise. This may become a factor after approximately 30 min of preparatory work after driller's arrival. Also, we will need to block off at least four parking spots (two for each of the proposed boring locations along the fence). Please coordinate with Zigmund to ensure that the locations are not taken by the cars; this is very important to ensure access for the drill rig and prevent any possible damage to the tenants's vehicles. The utility mark-outs will be scheduled for the next week. I will visit the site prior to the 14th to ensure that all utilities are marked. 2/21/08 - Raphael Ketani. Mr. Nadolishny called to say that they received the analytical results for the soil samples that were taken. He said that there are very few VOCs and the SVOCs are below TAGM. He said that no water was encountered, though they did sense some moisture at 18' below grade. He said that oil odors were also sensed at 18' below grade. This is where the soil samples were taken from. He asked what else needs to be done. I told him to send the analytical report, check out that the tank has been abandoned properly - and if not, then abandon it according to the regulations and laws, and update the PBS registration to reflect that the 15000 gal. tank is abandoned in place and the 12000 gal. tank is in service. He said he will do this. 3/3/08 - Raphael Ketani. I spoke to Mr. Nadolishny (917) 299-0551. He said that he has obtained paperwork showing that the 15000 gal. tank was cleaned out and filled with cement. I told him to send DEC copies of this paperwork. I told him to include the paperwork as part of the report. I asked him about the PBS registration. He said he will fill out the form and have a member of the co-op board sign it. I told him to make sure that DEC's PBS Unit gets the form with an original signature. He said he will see to it. 3/21/08 - Raphael Ketani. I tried to contact Mr. Nadolishny and Mr. De Luca regarding the submission of the closure report, but could only leave messages. 3/24/08 - Raphael Ketani. Mr. Nadolishny returned my call. He said that he has all of the paperwork together and that Mr. DeLuca will sign the papers. Once the papers are signed, then the report will be mailed. I called up Mr. Nadolishny and asked him how ready he was to send the paperwork and closure report. He said that the PBS form is properly filled out and the check for filing has been given to him. He said that the rest of the report just needs Mr. DeLuca's signature. Then it will go out. 3/25/08 - Raphael Ketani. Today I received the subsurface investigation report dated March 14, 2008. I reviewed the report. The analytical results for the four successfully installed borings (SB-01 to SB-04) were included in the report. There were virtually no hits for VOCs or SVOCs for the soil samples from SB-01 to SB-02. SB-03 and SB-04 each had a number of VOC and SVOC hits, but the results were well below TAGM limits. The boring logs for SB-03 and SB-04 indicate oil contaminated soil at depth (14' to 18' for SB-03 and 12' to 15' for SB-04). This is not surprising since these two borings are next to the failed UST. SB-03 had wet sand at 18' to 20' and was turned into

S106703569

a well. No other borings encountered water. Mr. Nadolishny included 42 high quality photos, but he didn't include a caption for each photo. So it is difficult to know what the pictures are showing. He included the PBS registration form with the report. I made a copy of the form for the report and forwarded the one with the original signature to Nick Lombardo of the PBS Unit. Based upon the information in the report, it is clear there is some residual oil next to the old UST. However, given the small area next to the tank, the depth of the residual contamination, the fact that it is #6 oil, and the limited extent of the contamination, I would not order the owners to dig up the oil. I left a message for Mr. Nadolishny asking him to explain each picture he took, whether the tank was abandoned properly, and whether he collected a groundwater sample. I tried to contact Mr. DeLuca regarding the tank abandonment, but could only leave a message. I had spoken to Mr. Nadolishny (917) 299-0551 on 2/21/08 and on 3/3/08 regarding documentation that the tank had been abandoned properly. During our 3/3/08 conversation, he said he had the abandonment paperwork. My letter of 10/12/07 also requested documentation of the abandonment. This and the PBS issue are the only things holding up closing the case. Mr. Lombardo of the PBS Unit informed me by e-mail today that the PBS application was no good. The Federal Tax I.D. was different than on the present record, they owe \$1000, and they list tanks #2 and #3, not #1 and #2. He will notify them by mail as to what they have to do. 3/26/08 - Raphael Ketani. Mr. Nadolishny responded to my phone messages with an e-mail he sent today. He wrote that he could not recover groundwater from the well at SB-03. He believes it's perched water. Also, he will put together the tank closure documentation and the captions for the photos and send them to me. 4/30/08 - Raphael Ketani. I checked the PBS registration. They have 3 tanks listed. Tanks one and two are 12,000 gals. and in service and tank three is temporarily out of service. I called up Mr. Nadolishny and left him a message that this was wrong and to call me to straighten out the registration. I also contacted Mr. DeLuca and told him the registration was incomplete and so the spill case will not be closed. He told me that he will see Mr. Nadolishny later in the day and will give him another check for \$500 (total \$1,000). 5/15/08 - Raphael Ketani. I reviewed the PBS registration #2-210684. It shows the 15000 gal. tank as closed in place and two 12000 gal. tanks. The registration is still incorrect as there should be only one 12000 gal. tank registered. The closure date (12/30) for the 12000 gal. tank belongs to the 15000 gal. tank. I asked Nick Lombardo of PBS to correct the registration. Based on the subsurface investigation report dated 3/14/2008 and the PBS registration, I am closing the spill case."

Remarks:

"INWOOD TOWERS DETERMINED (BY TT) THAT IT HAD A LEAKING UST. A 10/1/93 PLAN TO REPLACE TANK/ABANDON OLD UST. CLEANUP CONTINUES VIA COLLECTION TANK ON HILLSIDE BY WINSTON CONTRACTING. RP ASSUMING BILLS."

DEC Memo: "5/2/08 Sent ttf letter to: Carmen Santiago The Dermot Company 1775 Broadway, Suite 510 New York, NY 10019 1/15/09. J.Krimgold reviewed the letter-report submitted by Approved Oil Company of Brooklyn and dated 12/13/08. According to this letter, the tank is aboveground and was tested to satisfy private requirements. The cause of the failure was a suction line which was at some time back temporarily replaced by cooper tubing leaving a gap in the tank topping. After replacing cooper tubing with permanent pipe the tank system was retested and passed. NFA. J.K."

the owner, report was not sent. 3:13 PM:- spoke with Janet Gerena at Mr. Levine's office. informed her about open spill case and asked her to submit report. she asked to send correspondence to her attention. Janet Gerena Sherman Holding Corp. **property owner** Ph. (212) 838-1255 email: janet@redwoodreg.com 3:34 PM:- sent letter to Ms. Gerena requiring submission of tank test failure investigation report by the end of 01/22/2016. letter emailed to Ms. Gerena and Rob. 01/15/16-Hiralkumar Patel. 3:49 PM:- sent email to Ms. Gerena reminding that report is due on 01/22/16. 04/05/16-Hiralkumar Patel. DEC Mahat forwarded email from Dave from Riteway. Dave submitted a spill closure request report. as per the report, the tank system failed a tightness test due to faulty fill and vent lines. these faulty lines were replaced and total of 10 drums of debris removed from tank room. as per discussion with Rob on 09/02/15, a new fill and vent lines were installed at different location and the old fill line was still in-place. spoke with Dave at Riteway. informed him that the department requires investigation along the former faulty lines. 1:12 PM:- left message for Ms. Gerena. 1:32 PM:- received call from Pete from Riteway. he mentioned that besides faulty fill and vent lines, they had found old cut on tank top which had also contributed in initial system failure. informed Pete that this information is not included in the report. also informed him that the department requires investigation along the former faulty lines. he will talk to property manager. 3:08 PM:- received call from Pete. he spoke with Martin Levine, property owner and will send him proposal for investigation along former leaking lines. Pete provided Mr. Levine's cell number. 3:10 PM:- spoke with Mr. Levine. he confirmed discussion with Pete. based on available information, asked Mr. Levine to submit report for investigation along the former leaking lines by the end of 05/06/16. 05/06/16-Hiralkumar Patel. 11:18 AM:- left message for Mr. Levine and reminded him that the report for investigation along the former leaking lines is due today. 11:20 AM:- sent email to Mr. Levine reminding to submit report today. email copied to Rob Hill. 11:35 AM:- received email from Dave from Riteway including copy of work proposal dated 04/06/16. Dave mentioned that they have not received response from property owner yet. 1:10 PM:- received call from Mr. Levine. he mentioned that he signed the work proposal from Riteway immediately after receiving it. he will check with his assistant to confirm that signed proposal was sent back to Riteway. asked Mr. Levine to provide work plan and schedule by the end of today. 1:20 PM:- sent email to Mr. Levine and asked to submit a work plan with schedule (for field work and submission of report) by the end of today for review and approval. email copied to Dave. 1:41 PM:- sent email to Charisma and Mr. Levine stating that the department requires investigation along all failed portions of the tank system and not only the fill line. 2:07 PM:- received email from Charisma stating that the vent line was removed and replaced. she mentioned that the vent line was corroded in tank room by the foundation wall. 2:08 PM:- sent email to Charisma inquiring about any release from faulty vent line. 2:31 PM:- received email from Charisma stating no release. 3:41 PM:- received email from Charisma including a site map with proposed boring locations along fill line. she mentioned that samples will be collected on 05/09/16. 05/10/16-Hiralkumar Patel. 1:38 PM:- spoke with Pete. he went to site yesterday to collect soil samples. out of six samples collected, petroleum odors were noted in five samples. he will discuss with Mr. Levine on next step (lab analysis of samples from fill line or

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/5/2004 Spill switched from Mulqueen to Sangesland Sangesland spoke to Mark at PTC about closing out the spill. The building now has a new owner and there are no records of the cleanup from 1996. At that time there was a 7,500 gal tank which leaked. This tank was removed and a new 9,000 gal AST tank was built in this room. To close out this spill number, PTC was directed to drill several soil borings in the floor to look for contamination. If these borings are clean, then PTC will put together a report with results along with photos and a request for closure. 3/16/2004 Ray (PTC) asked if contamination was found in the borings would a new spill number be required? Sangesland said no just an update to this old spill number would be required. 4/26/2004 Sangesland reviewed a soil sampling report submitted by Action Remediation (Kevin O'Connor) 516-781-3000. Report shows photos of the new tank, 8 soil boring locations around the tank and VOC/SVOC results from 2 soil samples. All results came back below TAGM. Spill Closed"

Remarks: "tank had a leak in it over the weekend and spill went into the basement of apartment complex"

Contact Name: SUPER
DEC Memo: "4/12/06 - Raphael Ketani. I called up (646) 721-4388, but it turned out to be a non-working cell number for a daughter of the super. I called up HESS and spoke to Mr. John Emms (201) 489-5100. He said that he sent out 2 of his own guys 4/17/06 - Raphael Ketani. I tried to contact the super, Mr. Grullon, at (917) 604-1500, but could only leave a voice mail message. Next, I tried to call Ultra Holdings at (212) 974-8546, but could only leave a voice mail message at their general mail box. Adriana Tejada, one of the daughters, called me back to say that PTC cleaned up inside and outside, but she didn't know how well things were done. I asked her to check. She said she would and will call me back. I asked her how bad the odors are in the building. She said that she didn't smell anything. I spoke with Joe from PTC (718)624-4842. He said that oil leaked out the vent line and the manhole on the tank. He said that the tank needs a new vent line, but the manhole just needed to be tightened. Joe added that they cleaned up oil soaked debris behind the tank. I asked if PTC power washed the floor. He said that HESS has its own crew that does that. I called up Mr. Emms and he said that Customer Service (800-242-4377) is now in charge of the spill case and they will get back to me. Ray Soika of HESS called me back and said that they power washed the sidewalk, put down material to absorb the oil in the tank room, and removed oil soaked debris. He said that he didn't power wash the tank room because the distance to reach it with hoses was too long. I asked him for a letter to this effect with all of the necessary information. He said he will send it to me. 6/16/06 - Raphael Ketani. I tried to call Mr. Soika, but he was on vacation. Mr. Steve King talked to me and said he would try to find the cleanup report and send it to me. 6/30/06 - Raphael Ketani. I called up HESS and asked where the cleanup report was. I was connected with Eric and he said the report was sent out 6/20/06. I told him I would keep an eye out for it. 7/18/06 - Raphael Ketani. I tried to call Eric of HESS Customer Service, but could only leave a message. 7/19/06 - Raphael Ketani. Eric called me back. He said he would FAX the invoice from PTC for the cleanup work and the manifests. He said that no drains or sewers were affected and that there were no cracks in the floor in the vicinity of the tank. I received the PTC invoice for the supplies and manpower needed to cleanup the spill and two manifests for

sidewalk along St. Nicholas Ave. in front of Liranzo's Food Market at 1633 St. Nicholas Ave. found overflow at the vent pipe and oil spilled inside through cellar door. Miguel Grullon **building super** Ph. (212) 740-8068 Liranzo's Food Market **impacted basement near vent pipe** 1633 St. Nicholas Ave New York, NY Contact: Raphael Liranzo Ph. (212) 927-5371 property owner (according to PBS record): 192nd Street Realty LLC. 1841 Broadway, Suite 1000 New York, NY 10023 Attn: Blanca Buduen Ph. (212) 974-8433x208 DEC requires: 1) immediate tank test, 2) cleanup inside basement at Liranzo's food market, 3) soil investigation under sidewalk along fill line 11/24/08-Vought-Called and spoke to PTC Joe Ostrowski and he stated that crew was onsite today powerwashing and he felt that fill line was leaking and new tank may be needed as well and agreed with DEC requirement of immediate tightness testing. Vought called 192nd St Realty (Blanca Buduen 212-974-8433x208) and spoke to Buduen and faxed her CSL. Vought received call from and spoke to PTC Salamack and he suggested that gauge failed test last summer. 12/1/08-Vought-Spoke to DEC Ajoku who is manager of open TTF spill #0807695 at same location who will perform PBS inspection for possible violations. 12/15/08-Vought-Spoke with DEC Ajoku who spoke with Buduen who denied receiving letter dated 11/24/08 and original CSL, required proof of identity of DEC Ajoku and hung up phone. Vought left message for Buduen to return call. 04/14/09 : Consequent upon review of the report documents dated March 3, 2009 which was prepared and submitted by PTC, DEC deems it fit to close the spill number associated with this facility. Full detail of the report can be found in the cross referenced spill number 0807695 which is equally closed. (MA for Vought)."

DEC Memo: "10/3/08: Spill transferred from J. Kolleeney to J.Kann. 10/09/08: J.kann - Met with NYCHA and their consultant (Preferred Environmental) on October 3 to discuss requirements of the site. Proposed and agreed to the installation of 5 borings (collection of gw and soil from each) and 1 additional wells (3 wells remains on site, 2 with product). Work Plan will be submitted shortly. 11/24/08: J.Kann - WP submitted on 11/19/08 5/25/12: J.Kann - assigned priority P0 to site as a part of monthly report tracking. 4/27/16: J.Kann email sent on 6/20/14: Yelena- Based on the Langan site investigation report of 2009 (report), product was detected at the referenced site in MW-1 and MW-3. According to the recommendations in the report, product gauging and removal should be prepared on a monthly basis. If any work has been done in the last few years, please update me. If no work has been done, please have your staff gauge the two wells containing product using the gauging methods used at Seth Low Houses. Once product thickness is determined, please vacuum out the wells and continue gauging and product removal on a monthly basis thereafter and have quarterly reports prepared and submitted to the Department. If free phase product is no longer present at the site, please let me know. - Jennifer November 2009 SIR by Langan DEcDoced. 5/12/17: J.Kann - visited site today. Wells were gauged and only water detected. MW-1 did have thick weathered 6 oil on the side of it that stuck to the probe. This well was only 2 inches in diameter. Given that no dissolved phase was detected and no product at the groundwater interface, old tanks were removed over 15 years ago and no other source present, spill closed. Email sent to NYCHA."
Remarks: "CONTAMINATED SOIL FOUND DURING TANK PULL. SOIL BEING STOCKPILED - SAMPLES TAKEN FOR LAB ANALYSIS. See 9300549 and 9315476. George Breen."

Spiller Name: ALICIA
Spiller Company: APT BLDG/COMMERCIAL PROPERTY
Spiller Address: 569 WEST 192ND ST
Spiller Company: 999
Contact Name: DIANA PARKER
DEC Memo: "On site super/manager Alicia 914-441-2806 PBS # 2-277789 ***PBS still lists former owner*** Property was sold Dec.22, 2005 and new owner is: Lawrence Realty - 718-599-2047 (let ring 20 times) 150 North 9th St Brooklyn, NY 11211 Manager: Daniel Andrejczuk 08/24/09 I responded to the site being directed by RSE.A 3,000 gallon vaulted AST leaking slowly in the vault.Oil escaped out of the vault through the bottom of the vault.They put down plenty of speedy dry under the tank and outside of the vault to prevent oil migration.I net onsite manager Alicia and asked her to have a contractor immediately to empty the tank. She said they hired ABC tank and ABC will empty the tank and clean the spill Monday. I told her that tank needs to be emptied immediately as it was leaking actively.She tried to call her office and informed me that PTC will be at the scene in the evening to empty the tank. She left the scene without saying anything and never picked up the phone again.Being failed to inspect the boiler room, I called PTC and they confirmed me that crews are enroute to the site.I asked them to inspect the boiler room also to look for any drain/cracks.This morning i called PTC again and they told me the tank was emptied and PTC will be doing the clean up. Spill clean up letter was sent to(via fax also @718-599-0046) Lawrence Street Corp. 150 North 9th Street Brooklyn, NY 11211 Attn: Daniel Andrejczuk (sr) 09/02/09 I spoke with Alicia today and she told me that the spill has not been cleaned up yet, they hired a new company to do the clean up but could not give me the name of the company.(sr) 10/02/09 Rec'd closure report.Clean up was done by Enviro Waste. Disposal manifest and pictures of cleaned floor was provided.Report in edocs.(sr)"
Remarks: "LEAKING 3000 GALLON TANK ABOUT 50 GALLONS SPILLED TO THE BASEMENT FLOOR. CLEAN UP PENDING."

Spiller Extention:	Not reported
DEC Region:	2
DER Facility ID:	82791
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 8/15/07 - Haggerty - Assumed management of site 10/10/07 - Haggerty - approved Subsurface Investigation Work Plan 11/19/07 - Haggerty - spoke with Jake Lauford, Esq. (212-422-8500) who represents the owner of RG Ortiz Funeral. The current funeral parlor and parking garage sit on the former Exxon gas station. Kleinfelder needs access to install 1 MW on-site, 3 more MW's are on the adjacent sidewalks. I assured him Kleinfelder is a competent consultant and we will do our best to limit any inconvenience to the property and business. 1/3/08 - Haggerty - spoke with Shan Zuidema from Kleinfelder (845-567-6530). Property owner is requiring all work be done at night. Shan and I agree it isn't safe to have personnel working during January or February at night. Implementation of work plan will not proceed until March. 9/10/08 - Haggerty: Spoke with ExxonMobil/ Kleinfelder concerning the work plan. The current owner of the site still will not grant access to install the one on-site well. The other 3 wells are in the sidewalk. PM agreed to remove the on-site well from the investigation. 9/24/08 - Haggerty: PM on-site for the installation of MW-1. Slight staining encountered at the water table interface. MW-2 and MW-3 installed with no evidence of contamination. 1/02/09 - Haggerty: SIR reviewed, no soil contamination above standard. MW-1 Total BTEX 16ppb. PM would have closed spill at that time, but the dissolved lead concentrations in groundwater were elevated (810ppb). PM required groundwater sampling for RCRA 8 metals to see if this is a localized condition from the native soil or organic lead from the previous use of the site as a gas station. 3/20/09 - Haggerty: reviewed SIR Addendum, all RCRA 8 metals below standard. Most likely, turbidity of the original samples caused the elevated lead levels. This time, Kleinfelder used low-flow technique to collect the gw samples. The last samples were collected with a hand bailer. Spill closed"

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/30/2017	Source: EPA
Date Data Arrived at EDR: 06/08/2017	Telephone: N/A
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 99	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017	Source: EPA
Date Data Arrived at EDR: 06/09/2017	Telephone: N/A
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 98	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency

Number of Days to Update: 92	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/21/2017	Telephone: 800-424-9346
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 77	Next Scheduled EDR Contact: 01/29/2018
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/28/2017	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

NY Financial Assurance 2: Financial Assurance Information Listing

A listing of financial assurance information for hazardous waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

Date of Government Version: 03/09/2017	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/12/2017	Telephone: 518-402-8712
Date Made Active in Reports: 10/13/2017	Last EDR Contact: 09/08/2017
Number of Days to Update: 184	Next Scheduled EDR Contact: 12/25/2017
	Data Release Frequency: Varies

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

North Map:	5940553 YONKERS, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Precambrian
System: Precambrian
Series: Paragneiss and schist
Code: Ym (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Metamorphic Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

New York, New York
Langan Project No. 170505501**

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.

The Subject Property is located at **4650 Broadway** in New York, New York. The Subject Property is identified as **New York City Tax Block 2175, Lot 1**, and is bound by Dongan Place to the north, Arden Street to the east, Sherman Avenue to the south, and Broadway to the west.

Please contact me at 212-479-5400 with any questions or send your response to my attention at ksimmonsg@langan.com or at the below address:

Langan Engineering and Environmental Services, P.C.
21 Penn Plaza
360 West 31st Street, 8th floor
New York, New York 10001-2727

Thank you in advance for your cooperation.

Sincerely,

**Langan Engineering, Environmental, Surveying
and Landscape Architecture, D.P.C.**

Dear Sir or Madam

We hereby acknowledge receipt of your Freedom of Information Law ("FOIL") request. Your request is important to us and will be handled as expeditiously as possible. Please be advised however, that because of the large volume of pending complex FOIL requests handled by the Department of Environmental Protection ("DEP"), and the available staffing, your response is anticipated to take between 120-150 days from the date of this acknowledgement.

Please also be advised that for requests that appear to be submitted in connection with a Phase I site assessment of a property, DEP's response will exclude records relating to asbestos, and discharges into the sewers, as non-scope items, unless the FOIL request explicitly asks for those records. To the extent you require this information, please specify so in the FOIL request. In addition, any information on boiler permits filed with DEP is already publicly available at the following website <https://a826-web01.nyc.gov/DEP.BoilerInformationExt/>. Accordingly, DEP's response assumes you have directly obtained any relevant records from that website, and will exclude those records, as well.

Sincerely,
Records Access Officer

Subject: FOIL Request :: W029881-113017

Dear Ken:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 11/30/2017 and given the reference number FOIL #W029881-113017 for tracking purposes. You may expect the Department's response to your request no later than **12/29/2017**.

Record Requested: Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have. The Subject Property is located at 4650 Broadway in New York, New York. The Subject Property is identified as New York City Tax Block 2175, Lot 1, and is bound by Dongan Place to the north, Arden Street to the east, Sherman Avenue to the south, and Broadway to the west.

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

BUREAU OF BUILDINGS
BOROUGH OF MANHATTAN, CITY OF NEW YORK

CERTIFICATE OF OCCUPANCY No. 12043 1927

Supersedes Certificate of Occupancy No.

To the owner or owners of the building: New York Jan. 14, 1927

THIS CERTIFIES that the building located on Block 2175, Lot 1
 known as 2-16 Sherman Ave., 4660-4664 Broadway-N21

under a permit, Application No. ²⁰⁴¹⁶² front ^{347 N.E. of} 19 25 conforms to the approved plans and specifications accompanying said permit and any approved amendments thereto, and to the requirements of the building code and all other laws and ordinances and to the rules and regulations of the board of standards and appeals, applicable to a building of its class and kind, except that in the case of a building heretofore existing and for which no previous certificate of occupancy has been issued and which has not been altered or converted since March 14, 1916, to a use that changed its classification as defined in the building code, this certificate confirms and continues the existing uses to which the building has been put; and

CERTIFIES FURTHER that the building is of fireproof construction within the meaning of the building code and may be used and occupied as a business building as hereinafter qualified, in a business district under the building zone resolution, subject to all the privileges, requirements, limitations, and conditions prescribed by law or as hereinafter specified.

Basement		25		25	Automobile Manufacturer's sales and distributing agency.
1st Story	120	25	0	31	
2nd "	120	50		50	

NOTE: Occupancy subject to restrictions in Resolution of Board of Standards and Appeals, Cal. 581-28-B, 2.

A temporary Certificate of Occupancy is hereby issued pending decision of Board of Standards and Appeals as to sprinkler system.

This certificate is issued to Packard Motor Car Co. of N.Y.
 61st St. & Broadway, City. OWNER

The superimposed, uniformly distributed loads, or their equivalent concentrated loads in any story shall not exceed the live loads specified above; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that cited by this certificate except as specifically stated.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

Unless specifically stated above, the building or any part thereof, if certified as a public building, shall not be used as a building in which persons are housed or received, judicial, charitable or other care or treatment, such as a hospital, asylum, etc., or in which persons are held or detained under legal restraint, such as a police station, jail, etc.; nor shall it be used as a motion picture theatre as defined in section 30, chapter 3, Code of Ordinances; nor as a theatre or opera house or other building intended to be used for theatrical or operatic purposes, or for public entertainment of any kind, for the accommodation of more than 300 persons.

Unless specifically stated above, the building or any part thereof, if certified as a residence building, shall not be used as a tenement house as defined in the tenement house law; nor shall it be used as any form of residence building having more than 15 sleeping rooms; nor shall it be used as a lodging house within the meaning of Sec. 1305 of the Greater New York Charter.

Unless specifically stated above, the building or any part thereof, if certified as a business building, shall not be used as a garage, motor vehicle repair shop or oil selling station as defined in section 1, chapter 10, Code of Ordinances; nor shall it be used for the generation or compression of acetylene; nor as a factory building as defined in the labor law; nor as a grain elevator; nor as a coal pier; but, if approved as a factory building for less than twenty-five persons, it shall not be used for any other purpose.

Except as otherwise noted above, the building, or any part thereof, if located elsewhere than in an unrestricted district, shall not be used for any of the purposes enumerated in paragraph (a) of section 4 of the building zone resolution; nor for any trade, industry or use that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise; nor for any kind of manufacturing not already prohibited, except that, if located in a business district, not more than twenty-five per cent. of the total floor space may be so used, or space equal to the area of the lot in any case.

Except as otherwise noted above, the building, if certified as a garage, may not be used for more than five cars on any portion of a street between two intersecting streets, in which position there exists an exit from or an entrance to a public school, or in which portion there exists any hospital maintained as a charitable institution; and in no case within a distance of 200 feet from the nearest exit from or entrance to a public school; nor within two hundred feet of any hospital maintained as a charitable institution.

If the building has, at any time previous to the issuance of this certificate, been the subject of an appeal to the board of appeals or of a petition to the board of standards and appeals resulting in modification or variation of law or any lawful requirement, the construction and arrangement of the building as specified in the resolution granting such modification or variation, must be maintained, and all conditions imposed by either board must be observed.

No change or re-arrangement in the structural parts of the building, or affecting the lighting or ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing its height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located, until an approval of the same has been obtained from the superintendent of buildings.

This certificate supersedes each and every previously issued certificate of occupancy for this building or any part thereof, and each and every such previously issued certificate shall be null and void; and this certificate in turn becomes null and void upon the issuance of any new lawful certificate.

This certificate does not in any way relieve the owner or owners, or any other person or persons in possession or control of the building, or any part thereof, from obtaining such other permits or licenses as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

This certificate does not authorize the use or operation of any elevator in the building without the special certificate required by section 553 of the building code.

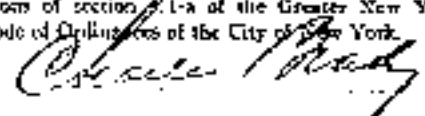

If the building is or is required to be equipped with standpipes or other fire extinguishing or gas shut off appliances, this certificate is not complete until such standpipes or other appliances have been inspected by the fire department (or by the Tenement House Department, in the case of a gas shut off in a tenement house) and approved in writing, either in a separate certificate or by endorsement upon this certificate. (Space for such endorsement is provided on page 4 of this certificate.)

If this certificate is marked "Temporary," it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to a tenement house unless also approved by the tenement house commissioner; and it must be replaced by a full certificate as soon as the entire building is completed according to law and ready for occupancy.

The word "class" as used in this certificate refers to the classification of buildings in the building code (section 70).

This certificate is issued in accordance with the provisions of section 1-a of the Greater New York Charter and of section 3 of chapter 5 (Building Code) of the Code of Ordinances of the City of New York.

Examined

Superintendent of Buildings, Borough of Manhattan

Additional copies of this certificate will be issued, upon written request, to persons having a proprietary interest in the building.

BUREAU OF BUILDINGS
BOROUGH OF MANHATTAN, CITY OF NEW YORK

CERTIFICATE OF OCCUPANCY No. 13334 1927

Temporary
Supersedes Certificate of Occupancy No. 18048

To the owner or owners of the building.

New York Dec. 8, 1927

THIS CERTIFIES that the building located on Block 2176, Lot 1

known as 2-18 Sherman Ave. - 4550-4564 Broadway near

204^{1/2} Street

under a permit, Application No. 347 N.B. of 1927 conforms to the approved plans and specifications accompanying said permit and any approved amendments thereto, and to the requirements of the building code and all other laws and ordinances and to the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind, except that in the case of a building heretofore existing and for which no previous certificate of occupancy has been issued and which has not been altered or converted since March 14, 1916, to a use that changed its classification as defined in the building code, this certificate conforms and continues the existing uses to which the building has been put; and

CERTIFIES FURTHER that the building is of **fireproof** construction within the meaning of the building code and may be used and occupied as a **business** building as hereinafter qualified, in a **business** district under the building zone resolution, subject to all the privileges, requirements, limitations, and conditions prescribed by law or as hereinafter specified.

NOT: Occupancy subject to restrictions in resolution of Board of Standards and Appeals, Vol. 461-25-N.Y.

This certificate is issued to **Packard Motor Car Company of N.Y.**
61st St. & Broadway, City, for the owner or owners.

The superimposed, uniformly distributed loads, or their equivalent concentrated loads in any story shall not exceed the live loads specified above; the number of persons of either sex in any story shall not exceed that specified when sex is made to be the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

OFFICE OF THE SUPERINTENDENT OF BUILDINGS, CITY OF NEW YORK

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

Unless specifically stated above, the building or any part thereof, if certified as a public building, shall not be used as a building in which persons are harbored to receive medical, charitable or public care or treatment, such as a hospital, asylum, etc., or in which persons are held or detained under legal restraint, such as a police station, jail, etc.; nor shall it be used as a motion picture theatre as defined in section 30, chapter 3, Code of Ordinances; nor as a theatre or opera house or other building intended to be used for theatrical or operatic purposes for public entertainment of any kind, for the accommodation of more than 300 persons.

Unless specifically stated above, the building or any part thereof, if certified as a residence building, shall not be used as a tenement house as defined in the tenement house law; nor shall it be used as any form of residence building having more than 15 sleeping rooms; nor shall it be used as a lodging house within the meaning of Sec. 1305 of the Greater New York Charter.

Unless specifically stated above, the building or any part thereof, if certified as a business building, shall not be used as a garage, motor vehicle repair shop or oil filling station as defined in section 5, chapter 30, Code of Ordinances; nor shall it be used for the generation or compression of acetylene; nor as a factory building as defined in the labor law; nor as a grain elevator; nor as a coal pocket.

Except as otherwise noted above, the building or any part thereof, if located elsewhere than in an unincorporated district, shall not be used for any of the purposes enumerated in paragraph (a) of section 4 of the building zone resolution; nor for any trade, industry or use that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise; nor for any kind of manufacturing not already prohibited, except that, if located in a business district, not more than twenty-five per cent. of the total floor space may be so used, or space equal to the area of the lot in any case.

Except as otherwise noted above, the building, if certified as a garage, may not be used for more than five cars on any portion of a street between two intersecting streets, in which portion there exists an exit door or an entrance to a public school; or in which portion there exists any hospital maintained as a charitable institution; and in no case within a distance of 200 feet from the nearest exit door or entrance to a public school; nor within two hundred feet of any hospital maintained as a charitable institution.

If the building has, at any time previous to the issuance of this certificate, been the subject of an appeal to the board of appeals or of a petition to the board of standards and appeals resulting in modification or variation of law or any lawful requirement, the construction and arrangement of the building as specified in the resolution granting such modification or variation, must be maintained, and all conditions imposed by either board must be observed.

No change or re-arrangement in the structural parts of the building, or affecting the lighting or ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height, shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located, unless an approval of the same has been obtained from the superintendent of buildings.

This certificate supercedes each and every previously issued certificate of occupancy for this building or any part thereof, and each and every such previously issued certificate shall be null and void; and this certificate in turn becomes null and void upon the issuance of any new lawful certificate.

This certificate does not in any way relieve the owner or owners, or any other person or persons in possession or control of the building, or any part thereof, from obtaining such other permits or licenses as may be prescribed by law for the use or purpose for which the building is designed or intended; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building, or not.

This certificate does not authorize the use or operation of any elevator in the building without the special certificate required by section 363 of the building code.

If the building is or is required to be equipped with standpipes or other fire extinguishing or gas shut off appliances, this certificate is not complete until such standpipes or other appliances have been inspected by the fire department (or by the Tenement House Department, in the case of a gas shut off in a tenement house) and approved in writing, either in a separate certificate or by endorsement upon this certificate. (Space for such endorsement is provided on page 4 of this certificate.)

If this certificate is marked "Temporary," it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to a tenement house unless also approved by the tenement house commissioner; and it must be replaced by a full certificate as soon as the entire building is completed according to law and ready for occupancy.

The word "class" as used in this certificate refers to the classification of buildings in the building code (section 70).

This certificate is issued in accordance with the provisions of section 411-a of the Greater New York Charter and of section 5 of chapter 5 (Building Code) of the Code of Ordinances of the City of New York.

Examined

Superintendent of Buildings, Borough of Manhattan

Additional copies of this certificate will be issued, upon written request, to persons having a proprietary interest in the building.

DEPARTMENT OF BUILDINGS

BOROUGH OF MANHATTAN, CITY OF NEW YORK

CERTIFICATE OF OCCUPANCY No. 19502

1934

Superior Certificate of Occupancy No. 13394

To the owner or owners of the building:

New York **March 10** 19**34**

THIS CERTIFIES that the building located on Block **2175** Lot **1**

known as **4650-4664 Broadway**
204th Street

under a permit. Application No. **19** conforms to the approved plan and specifications accompanying said permit and any approved amendments thereto, and to the requirements of the building code and all other laws and ordinances and to the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind, except that in the case of a building heretofore existing and for which no previous certificate of occupancy has been issued and which has not been altered or converted since March 14, 1916, to a use that changed its classification as defined in the building code, this certificate confirms and continues the existing uses to which the building has been put; and

CERTIFIES FURTHER that the building is of **fireproof** construction within the meaning of the building code and may be used and occupied as a **business** building as hereinafter qualified, in a **business** district under the building code regulations, subject to all the privileges, requirements, limitations and conditions prescribed by law or as hereinafter specified.

Note: The occupancy of this building is to be maintained in accordance with the conditions set forth in resolution of Board of Standards and Appeals, Cal. 74-33-N.Z.

This certificate is issued to

Martin J. Ort, representative
424 East 149th Street, City, for the owner or owners.

The superimposed, uniformly distributed loads, or their equivalent concentrated loads in any story shall not exceed the live loads specified above; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

Unless specifically stated above, the building or any part thereof, if certified as a public building, shall not be used as a building in which persons are harbored to receive medical attention or other care or treatment, such as a hospital, asylum, etc. or in which persons are held or detained under legal restraint, such as a police station, jail, etc.; nor shall it be used as a motion picture theatre as defined in section 30, chapter 3, Code of Ordinances; nor as a theatre or opera house or other building intended to be used for theatrical or operatic purposes, or for public entertainment of any kind, for the accommodation of more than 300 persons.

Unless specifically stated above, the building or any part thereof, if certified as a residence building, shall not be used as a tenement house as defined in the tenement house law; nor shall it be used as any form of residence building having more than 15 sleeping rooms; nor shall it be used as a lodging house within the meaning of Sec. 1305 of the Greater New York Charter.

Unless specifically stated above, the building or any part thereof, if certified as a business building, shall not be used as a garage, motor vehicle repair shop or oil selling station as defined in section 1, chapter 10, Code of Ordinances; nor shall it be used for the generation or compression of acetylene; nor as a factory building as defined in the labor law; nor as a grain elevator; nor as a coal pocket.

Except as otherwise noted above, the building, or any part thereof, if located elsewhere than in an unreticulated district, shall not be used for any of the purposes enumerated in paragraph (a) of section 4 of the building code resolution; nor for any trade, industry or use that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise; nor for any kind of manufacturing not already prohibited, except that, if located in a business district, not more than twenty-five per cent. of the total floor space may be so used, or space equal in the area of the lot in any case.

Except as otherwise noted above, the building, if certified as a garage, may not be used for more than five cars on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance to a public school, or in which portion there exists any hospital maintained as a charitable institution; and in no case within a distance of 200 feet from the nearest exit from or entrance to a public school; nor within two hundred feet of any hospital maintained as a charitable institution.

If the building has, at any time previous to the issuance of this certificate, been the subject of an appeal to the board of appeals or of a petition to the board of standards and appeals resulting in modification or variation of law or any lawful requirement, the construction and arrangement of the building as specified in the resolution granting such modification or variation, must be maintained, and all conditions imposed by either board must be observed.

No change or rearrangement in the structural parts of the building, or affecting the lighting or ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; and shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located, until an approval of the same has been obtained from the superintendent of buildings.

This certificate supersedes each and every previously issued certificate of occupancy for this building or any part thereof, and each and every such previously issued certificate shall be null and void; and this certificate in turn becomes null and void upon the issuance of any new lawful certificate.

This certificate does not in any way relieve the owner or owners, or any other person or persons in possession or control of the building, or any part thereof, from obtaining such other permits or licenses as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

This certificate does not authorize the use or operation of any elevator in the building without the special certificate required by section 363 of the building code.

If the building is or is required to be equipped with standpipes or other fire extinguishing or gas shut off appliances, this certificate is not complete until such standpipes or other appliances have been inspected by the fire department (or by the Tenement House Department in the case of a gas shut off in a tenement house) and approved in writing, either in a separate certificate or by endorsement upon this certificate. (Space for such endorsement is provided on page 4 of this certificate.)

If this certificate is marked "Temporary," it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to a tenement house unless also approved by the tenement house commissioner; and it must be replaced by a full certificate as soon as the entire building is completed according to law and ready for occupancy.

The word "class" as used in this certificate refers to the classification of buildings in the building code (section 70).

This certificate is issued in accordance with the provisions of section 411-a of the Greater New York Charter and of section 5 of chapter 2 (Building Code) of the Code of Ordinances of the City of New York.

Examined

Superintendent of Buildings, Borough of Manhattan
Commissioner

Additional copies of this certificate will be furnished upon written request, if possible, having a properly stamped fee in the building.

Borough Superintendent

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or place on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons on a floor or in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended, nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or tenable condition, nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and restricts to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and regulations applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or adapted to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement as with the State Labor Law or any other law or ordinance, that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time, that Section 646B of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 E. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to various bureaus or offices in the Building Department upon payment of a fee of fifty cents per copy.

Note: The occupancy of this building is to be maintained in accordance with the terms and conditions set forth in resolutions of Board of Standards and Appeals, Cal. 74-33-B2, Bulletin 18, Vol. 26, April 29, 1941, and Bulletin 7, Vol. 31, February 5, 1946.

Note: This is a TEMPORARY Certificate of Occupancy issued for a term of five (5) years beginning from February 5, 1946.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side. The number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate may be furnished to persons having an interest in the building or premises upon payment of a fee of fifty cents per copy.

NOTES:

Richard V. ...
 Borough Superintendent

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the floor plan on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads or concentrated loads produced by the same stresses in construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated; nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that first by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishable appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or useful condition; nor from complying with an authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under its jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 24, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance, and that there are no notices of violations or orders pending in the Department of Buildings at this time; that Section 616F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 616F. No certificate of occupancy shall be issued for any building, structure, enclosure, plate premises wherein containers for inflammables, explosives, inflammables and other dangerous substances, compounds or mixtures are stored, or wherein fumigating or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and he certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded in the certificate of occupancy."

Additional copies of this certificate will be furnished to persons entitled to them in the office or premises, upon payment of a fee of fifty cents per copy.

**NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL
BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT**

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be altered from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed uniformly distributed loads, or concentrated loads producing the same stresses on the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners, or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the use or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or workable condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate, it is not applicable to any building under the jurisdiction of the Planning Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate on the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been ~~fully~~ inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as shown on the reverse side, and that on examination and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement as with the State Labor Law or any other law or ordinance; that there are no returns of violations or orders pending in the Department of Buildings at this time; that Section 646C of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent; and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646C. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the Borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building on request, upon payment of a fee of fifty cents per copy.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. NYC DPD Affidavit in Lieu of Registration Statement

THIS INDENTURE, made the 6th day of April, 2005

BETWEEN BERMONT OPERATING CORP., a New York corporation,
having an office c/o Phillips Nizer LLP, 656 Fifth Avenue,
New York, New York 10103

Witnesseth:

party of the first part, and ACADIA-P/A SHERMAN AVENUE, LLC, a Delaware
limited liability company, having an office c/o Acadia Realty
Trust, 1311 Mamaroneck Avenue, White Plains, New York 10605

Witnesseth:

party of the second part,

WITNESSETH, that the party of the first part, in consideration of two dollars and other valuable consideration paid by the party
of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of
the second part forever,

All that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the
Borough of Manhattan, City, County and State of New York, bounded
and described as set forth in schedule A.

This conveyance is made with the unanimous written consent of
the stockholders of the party of the first part.

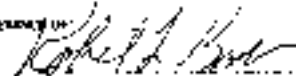

TOGETHER with all right, title and interest, if any, of the party of the first part, in and to any street and roads abutting the above-
described premises to the owner lines thereof. TOGETHER with the appurtenances and all the estate and rights of the party of the first
part in and to said premises; (1) (GIVE ASSET) (1) (1) (1) the premises herein granted unto the party of the second part, the heirs or
successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party first part will receive the
consideration for this conveyance and will hold the right to receive such consideration in a trust fund to be applied first for the purpose
of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any
part of the trust of the same for any other purpose.

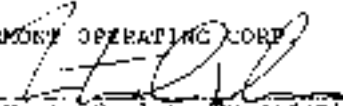

The word "party" shall be construed as if it read "parties" whenever the sense of this instrument so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

In presence of

BERMONT OPERATING CORP.

RECORDING THIS INSTRUMENT FOR USE OF RECORDING OFFICE

SCHEDULE A
DESCRIPTION

All that lot or parcel of land, in the Borough of Manhattan, County of New York, City of New York, State of New York described as follows:

Parcel A:

Lot Numbers 1 and 4 in Section Number 8, Block Number 2175 on the land map of the County of New York, and bounded and described as follows:

BEGINNING a point on the easterly side of Broadway at the northeasterly line of said Lot Number 4;

RUNNING THENCE easterly, or nearly so along said Lot Number 4, 220 feet 5 inches to the westerly line of Lot Number 100 on said map.

THENCE 113 feet 8 inches southeasterly along said westerly line of said Lot Number 100 to the northerly side of Sherman Avenue;

THENCE westerly or nearly so along the northerly side of Sherman Avenue to a point thereon distant 204 feet 4-3/8 inches westerly from the westerly side of said Lot Number 100;

THENCE running on a curved line, 96 feet 9-5/8 inches to a point on the easterly side of Broadway, distant 130 feet 5/8 inch southerly from the northerly line of said Lot Number 4.

THENCE northerly along the easterly side of Broadway, 130 feet 5/8 inch to the point or place of **BEGINNING**. Be the said several distances, more or less.

Parcel B:

Lot Number 50 on a certain map entitled "Map of 128 acres of land situated in the 12th Ward of the City of New York, part of the Estate of Isaac Dyckman, deceased, known as Fort George Property", Dated September 15th, 1868 by R. Ross, Surveyor, and filed in the Office of the Register of the County of New York on November 7, 1868 as map number 697 and which said plot is bounded and described as follows:

BEGINNING at a point on the easterly side of Broadway or Kingsbridge Road, as widened, at the southwesterly corner of plot number 49 on said map.

THENCE easterly or nearly so along said plot number 49, 202 feet to plot number 53 on said map.

THENCE southeasterly along the said plot number 53 on said map and parallel with a new street laid out by the Commissioners of the Central Park and designated on said map as boulevard or Dyckman Street, 53 feet 3 inches;

THENCE westerly or nearly so and along plot number 51 on said map, 220 feet 5 inches to the present easterly side of Broadway or Kingsbridge Road, as widened;

THENCE northerly or nearly so along the said present easterly side of Broadway or Kingsbridge Road, 50 feet to the point or place of **BEGINNING**.

BEING known by the street numbers 4650/6 Broadway and 16 Sherman Avenue.

RESUMES

Michael D. Burke, CHMM, LEED AP

Senior Associate/Vice President
Environmental Engineering and Remediation

16 years in the industry

Mr. Burke is a geologist/environmental scientist whose practice involves site investigation and remediation, transactional due diligence, environmental site assessments, in-situ remedial technology, and manufactured gas plant (MGP) site characterization and remediation. His additional services include multi-media compliance audits, sub-slab depressurization system design, non-hazardous and hazardous waste management, emergency response, community air monitoring programs, environmental and geotechnical site investigations, and health and safety monitoring. He has experience with projects in the New York State Department of Environmental Conservation (NYSDEC) and New York State Brownfield Cleanup (NYS BCP) Programs; Inactive Hazardous Waste, and Spill Programs, and New York City Office of Environmental Remediation (OER) e-designated and New York City Voluntary Cleanup Program (NYC VCP) sites.

Stuart Knoop, PG, LEED AP

Senior Project Manager
Remedial and Geological Investigations

15 years in the industry

Mr. Knoop is a geologist with experience at sites in New York, Connecticut, North Carolina, South Carolina, and Georgia. He has managed high profile, multi-disciplinary projects and worked extensively on projects under City and State regulatory oversight in New York City. Mr. Knoop has developed remedial action and waste management plans and executed remedial investigations, remedial actions, closures at brownfield sites, and former MGP and commercial development sites throughout New York City. He has conducted numerous Phase I and Phase II Environmental Site Assessments, and coordinated remedial action programs at commercial, residential, industrial, telecommunication, and undeveloped sites. He has also coordinated an on-call environmental contract with the New York City School Construction Authority and managed sites under the New York State Brownfield Cleanup Program, and the New York City Voluntary Cleanup Program.

Mr. Knoop's experience includes coordination of free product recovery, development of soil vapor mitigation systems, and implementation of soil and groundwater remediation programs utilizing soil vapor extraction, air sparging, chemical injection, and contaminant removal. He has also supervised the assessment and removal of petroleum underground storage tanks in accordance with state regulatory standards. Additional experience includes extensive geologic mapping, stable isotope reaction and transport modeling, geotechnical analysis of soil and rock for highway, and utility construction projects.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) prepared this Phase II Environmental Site Investigation (ESI) report on behalf of 4650 Broadway Holdings LLC for the property located at 4650 Broadway in the Inwood neighborhood of New York, New York (the site). The Phase II ESI was conducted in support of due diligence to investigate the Recognized Environmental Conditions (RECs) identified in Langan's March 6, 2018 Phase I Environmental Site Assessment (ESA).

The Phase II ESI included completion of a geophysical survey, advancement of soil borings, installation of temporary groundwater monitoring wells and sub-slab vapor probes, and collection and laboratory analysis of soil, groundwater and sub-slab vapor samples. The Phase II ESI field work was completed on March 12, 2018.

This report is organized as follows:

- Section 2.0: Describes the site background
- Section 3.0: Presents the Phase II ESI methodology
- Section 4.0: Presents the findings of the Phase II ESI
- Section 5.0: Presents conclusions based on the findings

2.0 BACKGROUND

2.1 Site Location and Description

The site is located at 4650 Broadway in the Inwood neighborhood of New York, New York, and is identified on the Manhattan Borough Tax Map as Block 2175, Lot 1. The 47,175-square foot lot is located at the southwestern corner of the city block bound by Dongan Place to the north, Arden Street to the east, Sherman Avenue to the south, and Broadway to the west and is improved with a two-story parking garage with a full cellar and partial sub-cellar. . The southern part of the building is operated by Park-it Pilot Parking LLC as a commercial parking garage, and the northern part of the building is used for the storage of antique cars and construction materials. A Site Location Map is included as Figure 1.

According to the United States Geological Survey (USGS) Central Park, N.Y.-N.J. 7.5-minute Series Topographic Quadrangle Map, the site elevation is about 40 feet above mean sea level (msl). The site is located in an urban area characterized by multiple-story commercial and residential buildings and a municipal park. A New York City Transit Authority (NYCTA) subway tunnel for the "A" line is located about 300 feet northwest of the site beneath Fort Tryon Park.

2.2 Recognized Environmental Conditions

Langan's March 6, 2018 Phase I ESA identified the following RECs associated with the site:

REC 1 – Open Petroleum Spill

Petroleum-impacted soil and groundwater were documented near three historical gasoline underground storage tanks (USTs) and a former petroleum tank room in the southern part of the cellar in 2004 and 2009. New York State Department of Environmental Conservation (NYSDEC) Spill No. 0902240 was reported, and the USTs and petroleum-impacted soil were subsequently removed. Endpoint sampling results indicate that soil impacts were remediated; however, quarterly monitoring performed through January 2016 indicates that petroleum contamination persists in groundwater and may impact soil vapor.

REC 2 – Historical Vehicle Repair

Vehicle repair was conducted at the site between about 1928 and at least 1950. Undocumented releases of petroleum, solvents, and/or other hazardous substances may have adversely impacted soil, groundwater, and/or soil vapor.

REC 3 – Off-Site Historical Petroleum Spill and Dry Cleaning Facility

A former petroleum spill and historical dry cleaning facility were located on the southern adjoining property at 107 Ellwood Street/7 Sherman Avenue. NYSDEC Spill No. 0809967 was

associated with soil and groundwater contamination originating from a petroleum tank release in 2008. Although the spill was closed in 2013, endpoint groundwater sampling was not documented. A commercial dry cleaning facility was also located at the site between 2001 and 2008. Residual petroleum impacts from the former spill and undocumented releases of chlorinated solvents from the drycleaner may have adversely impacted soil vapor and groundwater at the site.

2.3 Soil and Geology

Manhattan soil stratigraphy is generally characterized by layers of fill and native soil overburden above metamorphic bedrock. According to the USGS "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey" dated 1994, the bedrock formation underlying the site is part of the Inwood Marble and includes lenses of the Hartland Formation. The Inwood Marble is comprised of a white calcite-dolomite marble and coarse-grained siliceous dolomite. The western site boundary is congruent with a faulted contact between mica schist of the Manhattan Schist formation and the Inwood Marble. In areas west of the site within Fort Tryon Park, the Manhattan Schist slopes steeply upward and rock outcroppings are visible. A 2009 Supplemental Geotechnical Investigation conducted by Geo Tech Consultants, LLC identified the top of bedrock between 47 feet and 57 feet below the cellar slab.

2.4 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Groundwater was encountered at depths ranging from 4 to 7 feet below the cellar slab. Based on the topography surrounding the site, groundwater is inferred to flow east towards the Harlem River.

Groundwater in Manhattan is not used as a potable (drinking) water source. The potable water supply is provided to the site by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds. The current Federal Emergency Management Agency (FEMA) Advisory Base Flood Elevation Maps, dated September 5, 2007, include advisory flood zone boundaries and advisory base flood elevations.

Map No. 3604970184F indicates that the site falls into a Zone X area, which is determined to be outside the 0.2% annual chance floodplain.

3.0 FIELD INVESTIGATION

The Phase II ESI included completion of a geophysical survey, advancement of eight environmental soil borings, installation of four temporary groundwater monitoring wells, and installation of four sub-slab vapor probes, and collection of eight soil, four groundwater, and four sub-slab vapor samples for laboratory analysis. The Phase II ESI field work was completed on March 12, 2018. A sample summary is included in Table 1, and sample locations are shown on Figure 2. Photographs taken during the field investigation are included in Appendix A.

3.1 Geophysical Survey

Prior to intrusive sampling, NOVA Geophysical & Environmental, Inc. (NOVA), of Douglaston, New York, conducted a geophysical survey on March 12, 2018. NOVA used ground penetrating radar (GPR) and electromagnetic detection equipment to identify potential USTs and locate buried utilities and anomalies across accessible portions of the site. Borings were relocated as necessary to avoid subsurface and overhead utilities and support beams. A copy of the geophysical survey report is included in Appendix B.

3.2 Soil Investigation

Borings SB01 through SB08 were advanced by Eastern Environmental Solutions (Eastern) of Manorville, New York, on March 12, 2018. A Langan field engineer was on-site to document field observations and collect samples. Soil borings were advanced to depths of about 8 to 12 feet below cellar grade using a Geoprobe® 6610DT drill rig. Soil samples were collected continuously into 4-foot Macro-Core® sample barrels lined with dedicated acetate sleeves.

Soil samples retrieved from borings were visually classified for soil type, grain size, texture, and moisture content. Each sample was screened for visual, olfactory, and instrumental evidence of a chemical or petroleum release. Instrumental screening for the presence of organic vapors was performed using a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Eight soil samples were collected from borings SB01 through SB08 for laboratory analysis. Samples were collected from the interval exhibiting the greatest degree of impacts or from representative intervals across the historic fill. Samples submitted for volatile organic compound (VOC) analysis were collected directly from the acetate liner into laboratory-supplied Terra Core® soil samplers. The remaining sample volume was homogenized and placed in laboratory-supplied containers for additional analyses. The sample containers were labeled, placed in a laboratory-supplied cooler, and packed on ice (to attempt to maintain a temperature of about 4°C). The samples were picked up and delivered via courier service to Alpha Analytical Laboratories (Alpha) under standard chain-of-custody protocol. Alpha is a New York State

Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory located in Westborough, Massachusetts.

Soil samples were analyzed for Target Compound List (TCL) VOCs by United States Environmental Protection Agency (USEPA) method 8260C, TCL semivolatile organic compounds (SVOCs) by USEPA method 8270D, polychlorinated biphenyls (PCBs) by USEPA method 8082A, and Target Analyte List (TAL) metals by USEPA methods 6010C and 7471B.

Following sample collection, boreholes were backfilled to grade with soil cuttings that did not exhibit evidence of impacts and the ground surface was restored. Soil boring logs are included in Appendix C, soil boring locations are shown on Figure 2, and a soil sample summary is included in Table 1.

3.3 Groundwater Investigation

Four soil borings (SB01, SB02, SB03, and SB04) were converted into temporary groundwater monitoring wells by inserting 10 feet of 0.01-inch slotted, one-inch diameter, schedule-40 polyvinyl chloride (PVC) screen into each of the four borings. The screen was positioned to straddle the observed water table, which was encountered at depths ranging from 4 to 7 feet below the cellar slab. The annulus of each borehole was backfilled with clean sand. Following installation, the four temporary monitoring wells were sampled using a peristaltic pump. Prior to sample collection, a minimum of three well volumes were purged from each well, and attempts were made to stabilize groundwater parameters (pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential), with turbidity measurements below 50 Nephelometric Turbidity Units (NTU). Turbidity could not be stabilized under 50 NTU for any of the wells. Monitoring well construction logs and groundwater sampling logs are included as Appendix D.

Each groundwater sample was collected into laboratory-supplied glassware and delivered via courier service to Alpha. Groundwater samples were analyzed for Target Compound List (TCL) VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, PCBs by EPA method 8082, and dissolved metals (field filtered) by EPA methods 6010B/7471A. Temporary groundwater monitoring well locations are shown on Figure 2.

Following groundwater sampling, the temporary monitoring wells were removed and backfilled with soil cuttings, and the ground surface was restored.

3.4 Sub-Slab Vapor Investigation

Eastern installed four sub-slab vapor points (SV01, SV02, SV03, and SV04) to a depth of about 2 inches below the bottom of the cellar slab using a hand drill. The sub-slab vapor points were

installed in accordance with the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York. The sub-slab vapor points consisted of polyethylene probes and 3/16-inch polyethylene tubing. The annular space around the probes was backfilled with filter sand followed by bentonite seal at grade.

As a quality assurance/quality control (QA/QC) measure, an inert tracer gas (helium) was introduced into an above-grade sampling chamber before and after sampling to ensure that the sub-slab vapor probes were properly sealed above the target sampling depth, thereby preventing infiltration of ambient air to the subsurface. Direct readings of helium of less than 10 percent prior to sampling were considered sufficient to verify a tight seal. Each sub-slab vapor point was purged using a MultiRAE multi-gas meter at rate of 0.2 liters per minute (L/min) to evacuate a minimum of three sample tubing volumes prior to sample collection. The sub-slab vapor samples were collected into laboratory-supplied, batch-certified, 2.7-Liter Summa[®] canisters calibrated for 120 minutes of sampling. Summa[®] canisters were labeled and transported via courier to Alpha under standard chain-of-custody protocol for analysis of VOCs by USEPA method TO-15.

Following sample collection, sub-slab vapor tubing was removed and boreholes were backfilled to grade with soil cuttings that did not exhibit evidence of impacts and patched with concrete. Sub-slab vapor probe construction and sampling logs are included in Appendix E, sub-slab vapor probe locations are shown on Figure 2, and sub-slab vapor sample details are included in Table 1.

4.0 OBSERVATIONS AND RESULTS

4.1 Geophysical Survey

NOVA's geophysical survey identified various utility lines beneath the site footprint. Borings were relocated as necessary to avoid subsurface utilities. No tank-like anomalies were observed. A copy of the geophysical survey report is included in Appendix B.

4.2 Subsurface Observations

Fill material, generally consisting of brown, medium-grained sand with varying amounts of fine sand, silt, and gravel, was identified from surface grade to depths of up to 4 feet below the cellar slab across the site footprint. Native soil, typically consisting of brown, fine-grained sand with varying amounts of silt and clay, was identified across the site footprint beneath the fill layer to depths ranging from 4 to 12 feet below cellar grade. Groundwater was encountered at depths ranging from about 4 to 7 feet below cellar grade. Visual, olfactory, and instrumental evidence of petroleum impacts were apparent in soil boring SB02 within the 4 to 8 foot depth interval. Petroleum-like odors were apparent and greyish to black staining accompanied by PID readings of up to 1,380 parts per million (ppm) were detected from about 5 to 7.5 feet below grade surface (bgs).

4.3 Soil Sample Results

Soil sample analytical results were compared to Title 6 of the New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use (UU) and Restricted Use Restricted-Residential (RURR) Soil Cleanup Objectives (SCOs). Soil sample analytical results are summarized in Table 2, and analytical laboratory reports are included in Appendix F.

VOCs

The following VOCs were detected at concentrations above the RURRs in sample SB02_6-7 (RURR indicated in parentheses):

- 1,2,4-Trimethylbenzene – 730 mg/kg (52 mg/kg)
- 1,3,5-Trimethylbenzene – 220 mg/kg (52 mg/kg)
- Ethylbenzene – 110 mg/kg (41 mg/kg)
- Total Xylenes – 1,200 mg/kg (100 mg/kg)

The following VOCs were detected at concentrations above the UU SCOs in sample SB02_6-7 (UU indicated in parentheses):

- n-Butylbenzene – 21 mg/kg (12 mg/kg)
- n-Propylbenzene – 77 mg/kg (3.9 mg/kg)
- Toluene – 23 mg/kg (0.7 mg/kg)

SVOCs

One SVOC, naphthalene, was detected within the 6 to 7 foot depth interval in SB02 at a concentration of 14 mg/kg, exceeding the UU SCO of 12 mg/kg.

Metals

One metal, lead, was detected within the 1 to 2 foot interval in SB05 at a concentration at 104 mg/kg, exceeding the UU SCO of 63 mg/kg.

PCBs

PCBs were not detected at concentrations above the UU SCOs in any of the soil samples.

4.4 Groundwater Sample Results

Groundwater results were compared to the NYSDEC Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA (drinking water). Analytical results from the groundwater samples are summarized in Table 3.

VOCs

The following VOCs were detected at concentrations exceeding the TOGS SGVs in MW02_031218 (SGVs indicated in parentheses):

- 1,2,4,5-Tetramethylbenzene – 41 µg/L (5 µg/L)
- 1,2,4-Trimethylbenzene – 1,300 µg/L (5 µg/L)
- 1,2,5-Trimethylbenzene – 390 µg/L (5 µg/L)
- Acetone – 92 µg/L (50 µg/L)
- Ethylbenzene – 330 µg/L (5 µg/L)
- Isopropylbenzene – 49 µg/L (5 µg/L)
- Naphthalene – 72 µg/L (10 µg/L)
- n-Propylbenzene – 160 µg/L (5 µg/L)
- o-Xylene – 530 µg/L (5 µg/L)
- p/m-Xylene – 2,000 µg/L (5 µg/L)
- Toluene – 190 µg/L (5 µg/L)

SVOCs

One SVOC, naphthalene, was detected at a concentration of 73 µg/L in MW02_031218 exceeding the TOGS SGV of 10 µg/L.

Dissolved Metals

Manganese and sodium were detected in all of the groundwater samples at concentrations exceeding the TOGS SGVs. Magnesium (60,900 µg/L) and Mercury (1.35 µg/L) were detected in sample MW01_031218 at concentrations exceeding the TOGS SGVs of 35,000 µg/L and 0.7 µg/L, respectively.

PCBs

PCBs were not detected in any of the groundwater samples collected.

4.5 Sub-Slab Vapor Sample Results

The sub-slab vapor sample results were compared to the air guideline values (AGVs) and applied to the decision matrices established by the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York. NYSDOH AGVs exist for methylene chloride, tetrachloroethene (PCE), and trichloroethene (TCE). NYSDOH decision matrices evaluate eight VOCs (TCE, PCE, 1,1,1-trichloroethane, 1,1-dichloroethene, cis-1,2-dichloroethene, carbon tetrachloride, methylene chloride, and vinyl chloride) using three matrices that evaluate the relationship between soil vapor and indoor air concentrations and provide recommendations for actions such as monitoring or mitigation. There were no exceedances of the AGVs in any of

the soil vapor samples. Sub-slab vapor sample analytical results are summarized in Table 4, and analytical laboratory reports are included in Appendix F.

5.0 CONCLUSIONS

Based on the findings described above, the following conclusions were made:

- The geophysical survey did not identify subsurface anomalies indicative of a UST.
- Fill material, generally consisting of brown, medium-grained sand with varying amounts of fine sand, silt, and gravel was identified from surface grade to depths of up to 4 feet below the cellar slab across the site footprint. Native soil, typically consisting of brown, fine-grained sand with varying amounts of silt and clay, was identified across the site footprint beneath the fill layer to depths ranging from 4 to 12 feet below cellar grade. Groundwater was encountered at depths ranging from about 4 to 7 feet below cellar grade.
- Petroleum impacts were identified at the groundwater interface in soil and groundwater samples in SB02. Concentrations of several VOCs and naphthalene were detected above applicable soil and groundwater criteria. These impacts are related to historical releases from the three 550-gallon gasoline USTs formerly located in this area, documented as NYSDEC Spill No. 0902240. Monitoring of this open spill is ongoing.
- Lead was detected at a concentration above the UU SCO in SB05_1-2. This concentration is indicative of historic fill in New York City. Dissolved metals, including magnesium, manganese, mercury, and sodium, were detected at concentrations exceeding TOGS SGVs. Magnesium, manganese, and sodium are naturally occurring and are not indicative of a release. The groundwater sample containing dissolved mercury was collected within the fill material, which typically contains metals at concentrations exceeding applicable regulatory criteria.

6.0 LIMITATIONS

This report was prepared expressly for 4650 Broadway Holdings LLC for the property located at 4650 Broadway in New York, New York, and for the objectives defined herein. Langan cannot assume responsibility for the use of this report for any property other than the specific site addressed in this report, or by any third party without specific written authorization from Langan.

The conclusions, opinions, and recommendations provided in this report are based on subsurface conditions ascertained from the analysis of a limited number of samples. Recommendations provided are contingent upon one another and no recommendation should be relied upon or considered effective independent of the others. Actual conditions encountered may differ substantially from those presented herein and should be brought to our attention whereby we may determine how such changes may affect our conclusions, opinions, and recommendations.

Notes:

- Soil sample analytical results are compared to Title 6 of the New York Codes, Rules and Regulations (6 NYCRR) Part 375 Unrestricted Use (UU) and Restricted Use Restricted-Residential (RURR) Soil Cleanup Objectives (SCOs).
- Concentrations above the 6 NYCRR Part 375 UU SCOs are in bold. Concentrations above the 6 NYCRR Part 375 UU SCOs and RURR SCOs are bolded and shaded.
- Non detected compounds with Reporting Limits (RL) above the NYSDEC TOGS SGVS standards are in italics.
- mg/kg = milligrams per kilogram
- ~ = regulatory criteria does not exist for this compound
- VOC = volatile organic compound
- SVOC = semi-volatile organic compound
- PCB = polychlorinated biphenyl
- ND = Non detect

Qualifiers:

J = The analyte was detected above the Method Detection Limit (MDL), but below the Reporting Limit (RL); therefore, the result is an estimated concentration.
U = The analyte was analyzed for but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Re: Geophysical Engineering Survey (GES) Report
Commercial Site
4650 Broadway
New York, New York 10040

Dear Ms. Schmiedicke:

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 4650 Broadway, New York, New York 10040 (the "Site").

[INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY \(GES\)](#)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify underground utilities, storage tanks, and other substructures on March 12, 2018.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) with a shielded antenna and a Radio Detection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the

subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was also used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

DATA PROCESSING

In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.

Step 1. Import Raw RAMAC data to standard processing format

GEOPHYSICAL ENGINEERING SURVEY REPORT

Commercial Site
4650 Broadway
New York, New York 10040

Step 2. Remove instrument noise (*dewow*)

Step 3. Correct for attenuation losses (*energy decay function*)

Step 4. Remove static from bottom of profile (*time cut*)

Step 5. Mute horizontal ringing/noise (*subtracting average*)

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Sunny

Temperature: 45° F

Surface: Concrete, Backfill

Geophysical Noise Level: Geophysical noise at the site was high due to being located in an urban environment.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Multiple anomaly areas resembling disturbed earth were identified. The locations are shown in the site survey plan. None of these anomalies were consistent with any existing underground storage tank (UST).
- Multiple sewer lines were identified and are shown in the site survey plan. All other utilities were determined to be above ground.
- All detected subsurface anomalies were marked in the onsite mark out.
- Multiple boring locations were cleared. All cleared boring locations were marked in the onsite mark out.

Lab Number: L1808456
Report Date: 03/15/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 4650 BROADWAY
Project Number: 170505501

Lab Number: L1808456
Report Date: 03/15/18

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1808456-05: A sample identified as "TB01_031218" was received but not listed on the Chain of Custody. At the client's request, this sample was analyzed.

Dissolved Metals

The WG1096988-1 Method Blank, associated with L1808456-01 through -04, has a concentration above the reporting limit for aluminum. Since the samples were non-detect to the RL for this target analyte, no further actions were taken. The results of the original analysis are reported.

The WG1096988-3 MS recoveries for calcium (0%) and sodium (180%), performed on L1808456-02, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1096988-3 MS recovery, performed on L1808456-02, is outside the acceptance criteria for potassium (68%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name: 4650 BROADWAY
Project Number: 170505501

Lab Number: L1808456
Report Date: 03/15/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

Report Date: 03/15/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Report Date: 03/15/18

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1808457-02: The sample has elevated detection limits due to the dilution required by the sample matrix.

Total Metals

L1808457-01 through -08: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1097091-3 MS recoveries for aluminum (883%) and iron (878%), performed on L1808457-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1097202-3 MS recovery, performed on L1808457-01, is outside the acceptance criteria for mercury (140%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name: 4650 BROADWAY
Project Number: 170505501

Lab Number: L1808457
Report Date: 03/15/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Lab Number: L1808458
Report Date: 03/19/18

Case Narrative (continued)

Report Submission

The report replaces the partial report submitted on March 15, 2017. This is a final report including the results for all of the samples submitted for analysis.

Volatile Organics in Air

Canisters were released from the laboratory on March 12, 2018. The canister certification results are provided as an addendum.

L1808458-02: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The sample designated SV02_031218 (L1808458-02) required a dilution greater than 4X; based on direction from the client the New York Decision Matrix Compounds have been reported by TO15-SIM for these samples.

L1808458-01 through -04: The samples have elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: Data Usability Report

Project Name: 4650 BROADWAY
Project Number: 170505501

Lab Number: L1808458
Report Date: 03/19/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B

EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.**

Non-Potable Water
